

Akash Tamidalapati

Java Full Stack Developer

Overland Park, KS | (913) 820-1962 | akashtamidalapati2000@gmail.com | [LinkedIn](#)

SUMMARY

Java Full Stack Developer with 4+ years of experience building scalable web applications and microservices using Java, Spring Boot, React and Angular accelerated deployments and improved system uptime by leading cloud native migrations and implementing CI/CD pipelines with Jenkins, Docker and Kubernetes on AWS and Azure. Optimized RESTful APIs using asynchronous, event driven designs for better backend performance while developing dynamic front ends with JavaScript, TypeScript and micro front end architectures to accelerate feature delivery and enhance user engagement. Skilled in database tuning across Oracle, PostgreSQL, MySQL and NoSQL, delivering faster queries. Led Agile teams and enforced best practices, reducing defects via automated testing. Ensured security and compliance through JWT, OAuth, GDPR and cloud standards.

SKILLS

Languages: Java, JavaScript, TypeScript, C#, Python, SQL, HTML5, CSS3

Frameworks/Libraries: Spring Boot, Spring MVC, Hibernate/JPA, RESTful API, SOAP Web Services, GraphQL, React, React.js, Angular, jQuery UI, Bootstrap, Redux, Node.js, .NET, JSON, AJAX

Databases: Oracle, PostgreSQL, MySQL, SQL Server, MongoDB, DynamoDB

Microservices & Architecture: Microservices Architecture, Event-Driven Architecture, Message Queues (Kafka, RabbitMQ)

Cloud & Containerization: AWS (ECS, Lambda, RDS, S3), Azure, Docker, Kubernetes, Terraform

Testing: JUnit, Mockito, TestNG, Jest, Selenium, Playwright

DevOps & Collaboration Tools: Git, GitHub, Maven, Jenkins, Gradle, Agile, Scrum, JIRA, Confluence, Office 365

Security & Compliance: JWT, OAuth, GDPR, Cloud Security Best Practices

EXPERIENCE

Java Full Stack Developer | *PNC Financials*

Feb 2025 – Present

- Spearheaded development and migration of a microservices using Java Spring Boot, React, Docker and Kubernetes on AWS, improving customer engagement, increasing deployment frequency and system availability for real time financial services.
- Designed and implemented dynamic, accessible front end interfaces using Angular, React.js, TypeScript, HTML5, CSS3, Bootstrap and jQuery UI, including micro front end architectures with module federation, accelerating feature delivery.
- Optimized backend performance using Node.js and JavaScript by reducing API latency through REST enhancements and asynchronous multithreading, boosting scalability and reliability with event driven architectures.
- Designed and developed scalable, high performance RESTful APIs and backend services with Spring Boot, Spring Data and Hibernate, integrating Oracle, PostgreSQL and MongoDB, using advanced SQL/PLSQL for high volume query optimization.
- Established robust CI/CD pipelines using Jenkins, Git, Maven and Gradle across AWS and Azure environments with container orchestration (Docker, Kubernetes), increasing automation and deployment reliability in regulated FinTech environments.
- Mentored junior developers via code reviews and best practices, boosting team velocity and code quality by implementing automated testing with JUnit, Mockito, Jest and TestNG, reducing production defects.
- Led Agile collaboration with product, UX and DevOps to redesign checkout flows, boosting conversion and reducing cart abandonment, while ensuring security and compliance with JWT, OAuth, GDPR and cloud best practices.

Java Full Stack Developer | *CueTech Systems*

Oct 2019 – Jul 2023

- Developed and maintained scalable, high performance full stack web applications using Java, Spring Boot, Spring MVC, React and Angular, ensuring high performance, uptime and faster time to market through efficient APIs and microservices.
- Leveraged modern JavaScript frameworks, React Query, TypeScript and GraphQL for efficient state management and API data caching, boosting frontend performance and customer satisfaction with maintainable code and better test coverage.
- Utilized Java and Python to develop automated scripts and data processing tools, including regression testing with Selenium, JUnit and Playwright, reducing manual QA time, improving efficiency and enhancing release confidence.
- Improved database query performance through index tuning, hibernate optimization and effective use of relational (MySQL, PostgreSQL, SQL Server) and NoSQL (MongoDB, DynamoDB) databases, resulting in faster report generation and uptime.
- Led legacy system migration to AWS cloud native apps, improving scalability and reducing costs, while championing CI/CD pipeline adoption with Jenkins, Docker, Kubernetes and Terraform to streamline deployments, tripling release frequency.
- Led development of fault tolerant microservices integrated with Kafka and RabbitMQ, enhancing reliability and reducing downtime, while designing secure RESTful APIs and SOAP web services for seamless cross platform data exchange.
- Collaborated cross functionally using Agile tools like JIRA and Confluence to improve delivery predictability and team velocity; conducted code reviews and debugging to reduce bugs and led architecture aligned with business goals.

EDUCATION

Master's in Computer Science | *University of Central Missouri*

May – 2025
