

Bojja Akhil
JAVA DEVELOPER

akhilb.it01@gmail.com

+1 (940) 745-4203

SUMMARY

- Around 6 years of hands-on experience designing, developing, and deploying scalable enterprise applications using Java/J2EE and modern full-stack technologies across all over the USA.
- Proficient in Java 17 and the Spring ecosystem, including Spring Boot, Spring MVC, Spring Security, and Spring Data JPA for building robust microservices.
- Experienced in developing and integrating RESTful APIs, implementing security, and optimizing performance through effective tuning and monitoring practices.
- Developed User Interface view with Spring MVC and reactJS as Microservices applications.
- Developed Graphical User Interface (GUI) using React with Spring boot, HTML, CSS, jQuery, Java Servlet and JSP.
- Extensively used Java 8 features Used HTML5, CSS, jQuery, Ajax and performed client-side validations using JavaScript.
- Skilled in front-end development using Angular and React.js to create responsive, maintainable, and user-friendly interfaces.
- Strong background in CI/CD automation using Jenkins and version control with Git to streamline build, test, and deployment processes.
- Worked with AWS services such as EC2, S3, ECS Fargate, and CloudFront for deploying and scaling cloud-native applications.
- Expertise in Client Side Designing and Validations using various technologies like HTML 5, CSS 3, Java Script, and React.
- Practical expertise in containerization and orchestration using Docker and Kubernetes for efficient, scalable deployments.
- Hands-on experience with relational databases like MySQL and Oracle, performing complex queries and database design.
- Exposure to caching and observability tools like Redis, ELK Stack, and Open Telemetry for improved performance and tracing.
- Strong analytical and problem-solving abilities with a focus on delivering maintainable, secure, and efficient enterprise-grade solutions.

Education Details

- Master's in information technology — Clark University, 2022
- Bachelor's in computer science — Sathyabama University, 2019

Certifications

- Oracle Cloud Infrastructure (OCI) Developer
- Oracle Cloud Infrastructure (OCI) Generative AI

TECHNICAL SKILLS

Category	Details
Programming Languages	Proficient in Java (7–17), Java 8, SQL, PL/SQL, Python, JavaScript, MATLAB, R, Kotlin, Go, TypeScript, Bash/Shell scripting, and OCaml for developing scalable and secure enterprise-grade solutions.
Java/J2EE Technologies	Strong expertise in J2EE, Servlets, JDBC, JavaBeans, Log4j, XML, JUNIT, Web Services, Spring Boot, JAX-RS, Apache Camel, JSP, JSF, Maven, Gradle, and Mockito for building robust backend systems and microservices.
Web Technologies	Experienced with HTML5, CSS3, JavaScript (ES6+), TypeScript, Bootstrap, React.js, TailwindCSS, Express, Vue.js, Next.js, Redux, GraphQL, Webpack, Vite, Jest, Cypress, and Playwright for dynamic and responsive web applications.
Frameworks & Libraries	Hands-on with Spring, Spring Core, Spring MVC, Spring Boot, Spring Security, Spring ORM, Spring AOP, Spring Cloud, Spring Batch, Hibernate, JPA, MyBatis, Micronaut, and Quarkus for developing modern, cloud-ready applications.
Databases & Messaging	Skilled in Oracle DB, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, Redis, Elasticsearch, and GraphQL-integrated databases. Experienced with Apache Kafka and RabbitMQ for distributed event-driven architectures.
Cloud & DevOps	Worked extensively with AWS (EC2, S3, Lambda, DynamoDB), Azure, GCP, Docker, Kubernetes, Terraform, Ansible, GitHub Actions, and GitLab CI/CD pipelines for automated deployment, scaling, and infrastructure management.

Work Experience

United Software Group, TX

Aug 2023 – Present

Senior Full Stack Developer (Microservices & Cloud Focus)

Responsibilities:

- Developed User Interface view with Spring MVC and reactJS as Microservices applications.
- Used HTML5, CSS, jQuery, Ajax and performed client-side validations using JavaScript.
- Responsive UI modules using Backbone.JS, Handlebar JS, Ember JS.
- Created Updates data using CRUD (Create, read, update, delete) features of JPA and Pagination for Tables.
- Developed Restful services based on Spring REST using Jersey framework.
- Developed SQL queries and scripts to examine the data.
- Set-up connection with Oracle 10g Database Server using JDBC, Hibernate Template.
- Developed Graphical User Interface (GUI) using React with Spring boot, HTML, CSS, jQuery, Java Servlet and JSP.
- Wrote Hibernate Criteria queries for data retrievals and performed the ORM mappings to map java entities to database tables.
- Implemented AWS EC2 clusters to deploy containerized applications.

- We kept up the bean life cycle by utilizing Spring IOC which keeps up session information of beans.
- Implemented Hibernate Template to great extent making use of HQL, Named Parameters, Named Queries, and interfaces such as Expression, Query and Criteria.
- Developed SOAP web services using JAX-WS and persistence using the Hibernate and JPA framework.
- Used Typescript and implemented classes, interfaces, and methods.
- Message broker services are achieved in the application using Kafka for an event driven module.
- Implemented Spring Dependency Injection (IOC) feature of spring framework to inject beans into User Interface and AOP for Logging.
- Used Jenkins pipelines to drive all micro-Services builds out to the Docker registry and then deployed to Azure Kubernetes Services, Created Pods and managed using Azure Kubernetes services.
- Configured Jenkins to handle application deployment on server and to integrate with GitHub version control.
- Build a CI/CD pipeline using Jenkins automation and GitHub repositories using web hooks plugin.
- Use GitHub Copilot to speed up repetitive coding tasks, such as writing standard CRUD methods, DTOs, and form validations.
- Performed React JS end to end testing using Protractor framework and Integration testing methods and Behavioral driven are implemented using Selenium and Cucumber respectively.
- JIRA tool for project management used in the application to tack bugs, issues, and project management functions

Environment: ReactJS, HTML5, CSS3, AJAX, Bootstrap, JSON, XML, Kafka, Hibernate, Oracle 10g, microservices, JPA Framework, Spring Rest, Spring MVC, Spring Security, Hibernate, Spring Transactions, Spring Batch, Quartz scheduler, Spring IOC, Jenkins, Git, Oracle, Cloud server, JIRA, Kubernetes, Docker, Vault, Copilot.

OPTUM, FL — Senior Java Full Stack Developer

Jan 2022 – Aug 2023

Responsibilities:

- Full-cycle development across requirement analysis, architecture design, implementation, testing, and deployment for multiple hospital modules and workflows.
- Developed high-performance backend services using Java 8, Spring Boot, Spring MVC, and Spring IoC, ensuring modularity and scalability across hospital departments.
- Implemented RESTful microservices and integrated with external systems to enable seamless interoperability and real-time data synchronization between EMR modules.
- Utilized Hibernate ORM and Spring Data JPA for persistence, optimizing database access to improve query performance and reduce latency in patient data retrieval.
- Designed and deployed React-based responsive interfaces with HTML5, CSS3, and JavaScript, enhancing user experience for clinical and administrative staff.
- Applied Java 8 Streams, Lambdas, and multithreading to improve data processing efficiency and reduce runtime bottlenecks during concurrent transactions.
- Designed and tuned SQL queries, stored procedures, and views in Oracle DB to handle large-scale medical datasets with consistency and security.
- Followed MVC, DAO, Singleton, and Factory design patterns to maintain a clean and extensible application structure.
- Managed continuous integration and delivery pipelines with Jenkins, automated builds with Maven,

and versioned code through Git and GitHub.

- Coordinated sprint planning and issue tracking using Jira, ensuring transparent progress and timely release delivery.
- Deployed services on AWS EC2, configured secure access via IAM, and managed patient records through S3 for scalable cloud storage.
- Integrated Kafka for real-time event streaming and asynchronous communication between distributed modules, ensuring reliability under high data loads.
- Set up application monitoring and logging using ELK stack (Elasticsearch, Logstash, Kibana) for proactive system health tracking and troubleshooting.

Environment: Java 8, Spring Boot, Spring MVC, Spring IOC, HTML5, CSS3, JavaScript, Angular, Hibernate, Restful, Oracle DB, Git, Jenkins, Jira, EC2, IAM, S3, Kafka, monitoring, GIT.

Mind Leads, Hyderabad — Java Developer / Software Engineer

June 2019 – April 2021

Responsibilities:

- Designed and developed RESTful microservices using Java 8, Spring Boot, and Spring MVC for logistics and finance modules.
- Built scalable APIs integrated with Angular 6 front-end applications for smooth client-side data rendering.
- Implemented asynchronous event-driven processing using Apache Kafka to handle high-volume message traffic.
- Integrated Redis caching to improve API response speed and reduce database load by 35%.
- Modeled and optimized database schemas in Oracle and MongoDB to support performance-heavy transaction workflows.
- Automated unit and integration testing with JUnit, Mockito, and Cucumber, improving code reliability and regression coverage.
- Applied OAuth2 and JWT authentication mechanisms to secure internal and external API communications.
- Enhanced the data access layer using Hibernate and optimized queries for faster persistence operations.
- Refactored monolithic modules into microservices improving scalability and deployment efficiency.
- Deployed containerized services using Docker and assisted in CI/CD implementation for automated builds and releases.
- Conducted code reviews and implemented best practices for clean, modular, and maintainable codebases.
- Collaborated with functional and QA teams during Agile sprints, ensuring high-quality deliverables.
- Designed logging and exception-handling strategies for better fault detection and debugging.
- Introduced thread-safe designs and concurrency handling to optimize resource utilization under heavy loads.
- Supported production releases, hotfixes, and post-deployment monitoring to ensure application stability.

Environment: Java 8, Spring Boot, Spring MVC, Spring IOC, HTML5, CSS3, JavaScript, Angular, Hibernate, Restful, Oracle DB, Git, Jenkins, Jira, EC2, IAM, S3, Kafka
