SUMMARY

Analytical Data Analyst with 3+ years of experience delivering impactful analytics in finance and manufacturing. At Bloomberg LP, built credit risk forecasting models, automated reporting with Bloomberg API + Snowflake, and developed Power BI dashboards for early risk detection. At Reliance Industries, engineered predictive maintenance models, automated ETL pipelines, migrated data to AWS, and implemented demand forecasting to cut inventory costs. Skilled in SQL, Python, R, Power BI, AWS, Snowflake, and statistical modeling to drive data-informed business decisions.

WORK EXPERIENCE

Bloomberg LP – Data Analyst

USA, MD | Jan 2025 – Current

- Designed and implemented forecasting models using Python and R to analyze consumer credit behavior, improving accuracy of credit risk predictions across short-term portfolios.
- Automated credit risk reporting workflows by integrating Bloomberg API with Snowflake, eliminating manual processes and increasing data pipeline efficiency by 40%.
- Developed interactive Power BI dashboards to visualize early warning indicators (e.g., delinquency rates, credit stress), enabling faster risk mitigation by compliance teams.
- Partnered with compliance and financial reporting teams to enhance data governance, supporting internal controls and regulatory compliance (SOX, SEC).
- Maintained high data quality standards across Bloomberg Terminal and internal systems, ensuring accurate analytics and audit readiness.

Reliance Industries – Data Analyst

India, Mumbai | Jun 2020 – Dec 2022

- Built and deployed predictive maintenance models using Python on real-time SCADA sensor data, reducing refinery equipment downtime by 25% and extending asset life cycles.
- Designed and automated ETL pipelines using Talend and Alteryx to consolidate sensor, inventory, and ERP data across plants, improving reporting speed by 30% and reducing manual errors.
- Developed interactive Power BI dashboards integrating data from SAP ERP, Oracle, and production logs, offering real-time KPIs such as throughput, energy usage, and equipment availability to plant managers
- Implemented inventory demand forecasting models using time series algorithms in Python, reducing stockouts and excess inventory costs by 15%.
- Migrated operational data processes to AWS S3 and Glue, enabling scalable, centralized storage and analysis of multi-plant performance data with enhanced security and access control.
- Led a cross-functional analytics initiative with supply chain and operations teams to optimize procurement planning, resulting in an annual savings of over \$150K through improved vendor selection and lead time management.
- Conducted root cause analysis (RCA) and statistical deep-dives on production bottlenecks using regression and hypothesis testing, providing actionable recommendations that improved output consistency by 20%.
- Established and enforced data quality and validation rules across SAP and Oracle data sources, reducing reporting discrepancies by 40% and improving trust in analytics across operations and leadership teams.

EDUCATION

Master of Professional Studies, Data Science | GPA: 3.97/4.0

University of Maryland Baltimore County | USA | Jan 2023 – Dec 2024

Bachelor of Technology, Electronics and Communication | GPA: 8.33/10

B V Raju Institute of Technology | India | June 2017- Apr 2021

CERTIFICATIONS

NVIDIA - Accelerating End-to-End Data Science Workflows

CISCO - Data Analytics Essentials

TECHNICAL SKILLS

Programming & Analytics: Python, R, SQL, Statistical Analysis, Exploratory Data Analysis (EDA), Machine Learning, Time Series Forecasting, Logistic Regression, Data Visualization, Pandas, NumPy, Seaborn

Business Intelligence Tools: Power BI, Tableau, QlikView, Cognos Analytics, Power Query, DAX

Data Engineering & ETL: Talend, Alteryx, Apache Airflow, Informatica, SSIS, Data Pipeline Development, Data Cleansing, Data Transformation

Databases & Data Warehousing: MySQL, PostgreSQL, Oracle, MongoDB, Snowflake, SAP HANA, Azure Synapse, Google BigQuery, Data Modeling (Star, Snowflake Schema)

Cloud Platforms: AWS (S3, EC2, Glue), Azure (Data Lake, Synapse), GCP (BigQuery, Storage)

Tools & APIs: Bloomberg Terminal, Bloomberg API, SAP ERP, SCADA Analytics, Microsoft Excel (PivotTables, VLOOKUP, Power Query), Jupyter Notebook, VS Code

Version Control & Deployment: Git, GitHub, Flask API Deployment, Streamlit, CI/CD (basic exposure)

Statistical Methods: Descriptive Statistics, Hypothesis Testing, A/B Testing, T-Test, Z-Test, ANOVA, Correlation Analysis

PROJECTS

Customer Churn Analysis for Telecom Company

Tools: Python, Scikit-learn, SQL, Power BI, Flask

- Built a machine learning model using Random Forest and Logistic Regression to predict customer churn with 87% accuracy, enabling proactive retention strategies.
- Performed EDA and feature engineering on call logs, internet usage, and billing data using Pandas and SQL; identified top churn drivers such as service downtimes and payment delays.
- Developed a Power BI dashboard and Flask API to visualize churn risk and generate live predictions for customer service reps.

Sales Forecasting Dashboard for Retail Chain

Tools: Python, Time Series (ARIMA, Prophet), SQL, Power BI, Azure Blob Storage

- Designed and deployed a forecasting model using ARIMA and Facebook Prophet to predict daily sales across 50+ store locations, improving inventory planning accuracy by 25%.
- Ingested historical sales, promotions, and weather data from Azure Blob Storage and cleaned it using SQL + Pandas workflows for model readiness.
- Created a Power BI dashboard that visualized forecasted demand, seasonal trends, and store-level anomalies, driving smarter restocking decisions.
