EDUCATION

University of North Carolina Charlotte, Charlotte, NC
Master of Science, Computer Science

Aug 2024 – Present
CGPA : 3.88/4

- **Relevant Courses:** Data Structures and Algorithms, Artificial Intelligence, Software System and Design Implementation, Visual Analytics, Database Systems, Big Data, Data Mining, Computer Communication Networks.

SKILLS

Programming	: Java, Python, C, C++, JavaScript, TypeScript, SQL, R.
Frontend & Backend	: HTML, CSS, React.js, Angular, Next.js, Spring Boot, Microservices, Node.js, REST APIs.
Databases	: MySQL, MongoDB, PostgreSQL, Oracle, SQL Server, IBM Dbeaver.
Cloud, DevOps & Tools	: AWS (EC2, S3), Docker, Kubernetes, Jenkins, CI/CD, IntelliJ IDEA, Eclipse, Git/GitHub, Visual Studio.
Frame Works & Libraries	: Spring Framework, Unix/Linux, JUnit, PyTorch, TensorFlow, NumPy, Matplotlib.
Other Skills	: Agile (Scrum), SDLC, OOAD, Operating Systems, Computer Networks, Data Mining, Tableau, Figma, UML.
Certifications	: AWS Data Engineering.

EXPERIENCE

Local Grown Salads (Agronomist Team)

United States

Full-Stack Developer | *Tech Stack: Java, React, RESTful, PostgreSQL, Docker, CI/CD with Jenkins*

Sep 2025 – Present

- Designed and built scalable full-stack web applications enabling real-time data exchange for 30+ entities across agronomist and grower modules, improving system efficiency and reducing query latency.
- Engineered scalable backend pipelines integrating AI/ML models for yield prediction using Java, Python, and PostgreSQL, optimizing data preprocessing and API orchestration for distributed performance.
- Applied data structures and algorithms to model relational data and improve CRUD operations, ensuring efficient indexing and high availability across production environments on AWS.
- Collaborated in Agile sprints with cross-functional teams to design, test, deploy, maintain, and improve application features via CI/CD pipelines, ensuring reliability, version control, and seamless production rollouts.

Ceremorphic

Hyderabad, India

Software Engineer | *Tech Stack: Java (Spring Boot), React, REST APIs, PostgreSQL, Jenkins, Docker, Kubernetes, JWT, JUnit*

Jan 2024 – Jul 2024

- Developed and optimized distributed and parallel microservices using Java (Spring Boot) and React to handle large-scale transactional data, ensuring consistent performance and modular scalability.
- Designed and deployed RESTful APIs with PostgreSQL integration, leveraging algorithmic optimizations to reduce latency and improve backend throughput across environments.
- Configured and maintained CI/CD pipelines in Jenkins and automated containerized deployments with Docker and Kubernetes on Unix/Linux environments, achieving 20% faster releases and reliable scaling.
- Strengthened application security and reliability using JWT authentication, JUnit testing, and system-level monitoring, contributing to stable production-grade releases.

PROJECTS

LODGE-Long Dance Generation using Deep Learning | *PyTorch, NumPy, SMPLX, 3D Rendering, Inference Pipelines.*

- Designed and implemented machine learning-based generative motion synthesis models using PyTorch, integrating 3D body representations (SMPLX) to enable synchronized dance generation from audio input.
- Optimized inference pipelines for efficient computation and data handling, improving model throughput and reducing frame rendering time for faster output generation.

Spotting the Counterfeit – Banknote Detection System | *TensorFlow, Python, Pandas, Scikit-learn, NumPy.*

- Built and trained a machine learning classifier for counterfeit detection, applying feature extraction and statistical modeling to achieve over 95% classification accuracy.
- Leveraged algorithmic optimization techniques for data preprocessing and model evaluation, improving prediction speed and reducing false positives.

Hi Hugo! – AI Voice Assistant for Real-Time News | *React, Alan AI, Node.js, REST APIs.*

- Developed a cross-platform web-based AI assistant capable of processing 50+ news sources, applying NLP-based command recognition to deliver personalized, real-time updates.
- Ensured accessibility and usability by integrating voice-based navigation with Alan AI for inclusive, hands-free interaction. Optimized API orchestration and asynchronous data handling in Node.js, reducing network latency and improving response efficiency by 40%.

FARMEASY – Smart Agricultural Equipment Exchange Platform | *HTML, CSS, JavaScript, PHP, MySQL.*

- Engineered a full-stack platform to enable farmers to exchange agricultural equipment, designing relational database schemas and implementing RESTful workflows for secure transactions.
- Applied data normalization and caching strategies to enhance query response time by 30%, ensuring consistent performance and scalability during high user traffic.
