

University of North Texas, Denton, USA

Master of Science, Advanced Data Analytics

Vidya Jyothi Institute of Technology, India

B.Tech, Electronics and Communications Engineering

EDUCATION**PROFESSIONAL SUMMARY**

Results driven Data analyst with 4 years of experience in designing, developing, and deploying data driven solutions within enterprise environments. Proven expertise in SQL, Python, and cloud-based platforms with strong familiarity in Agile/Scrum methodologies. Adept at creating data pipelines, analyzing large datasets, and collaborating cross functionally to meet business and technical goals.

EXPERIENCE

Senior Data Analyst, Infinext Technologies**(Feb 2021 – July2023)**

- Transformed raw medical records into actionable insights using ETL pipelines built with SQL, Azure Databricks and Azure Data Factory, enabling physicians to tailor patient care and reduce readmission rates.
- Migrated and optimized curated healthcare datasets into Snowflake, enhancing query performance and enabling secure, governed data access for analytics and reporting
- Designed real-time analytics dashboards using Azure Stream Analytics, Event Hubs, and Power BI to enable hospital leadership to monitor ER flow, bed occupancy, and treatment timelines in real time.
- Audited and validated health data pipelines to ensure compliance with HIPAA through Informatica IDQ while enabling secure data sharing across departments and providers development.

Data Analyst, Accenture**(Jan 2019 – Oct 2020)**

- Built and maintained financial ETL pipeline using historical market and internal data to project revenue, evaluate risk, and support investment decisions.
- Conducted in-depth cost analysis using Azure Data Factory, Azure Synapse Analytics, to identify inefficiencies and uncover hidden cost drivers, directly contributing to strategic budgeting improvements
- Developed interactive dashboards in tools like Power BI to provide real-time insights into key financial metrics such as ROI, cash flow, and debt ratios. Integrated Power BI dashboards with Synapse and Data Lake to enable executive-level insights and governance.
- Applied row-level security (RLS), governance best practices, version control, and CI/CD pipeline integration to ensure secure and efficient report management.

TECHNICAL SKILLS

- Data Engineering & ETL:** Apache Spark, Apache Airflow, Azure Data Factory, SSIS, Informatica
- Databases & Query Optimization:** SQL Server, MySQL, Snowflake, Redshift, BigQuery
- Programming & Scripting:** Python, SQL, Pandas, Numpy, SciPy, Shell Scripting
- Cloud & Big Data:** Azure (Data Factory, Synapse, Data Lake, DataBricks)
- Data Streaming & Processing:** Azure Event Hubs, Azure Stream Analytics, PowerBI, Spark Streaming
- Data Modeling & Governance:** Star Schema, SCD Type 1 and Type 2, Data Lakes, GDPR.

ACADEMIC PROJECTS

- Capstone Project:**
 - Designed and deployed a personalized AI Email Generator using Tensorflow and Keras with attention based sequence to sequence modeling for GenAI driven text generation.
 - Trained the model on the Enron Email dataset with prompt-based conditioning and integrated Universal Sentence Encoder for contextual embeddings.
 - Built an interactive Streamlit app with templates for HR, customer service, and technical emails, supporting dynamic content customization
- Data warehouse Project:**
 - Designed and implemented a star schema model for C2C auction
 - Generated reports that helped company achieve its target of increasing its customer base and explore new features
 - Developed and enterprise data warehouse plan for an insurance to aid in making decisions on company's value chain
 - Created cubes with all the relevant dimensions and generated pivot table OLAP report
- Data analysis Project:**
 - Applied Multinomial logistic regression model to patient medical records to predict their final medical outcome due to the usage of medical drugs that caused adverse effects like infection, diarrhea, etc on them
 - Applied Recursive feature elimination (RFE) algorithm for feature selection which increased model accuracy.
 - Defined data model and developed ETL to cleanse voluminous data to feed them to statistical models
- Data Visualization Project:**
 - Develop and design complex tableau dashboards that help to understand the earthquake prone regions in world
 - Plotted world map with earthquake data and used bubble chart to understand the magnitude of those earthquakes
- Data analysis and Decision modeling Project:**
 - Performed data exploration and Random forest model to predict customer churn based on usage and demographic data.
 - Used feature selection methods to identify important churn drivers, enabling focused retention strategies.
 - Designed an interactive Power BI dashboard with KPIs, filters, drilldowns to highlight high risk segments. Provided insights and recommendations to improve customer retention efforts.
