

SUMMARY

I am a Data Analyst with experience applying AI and data science to clinical, finance, and life sciences datasets. I work with SQL, Python, Power BI, and ETL pipelines, and I’ve built predictive models, and worked with cloud platforms like Azure and Boomi. I’ve designed dashboards, automated pipelines, and ensured compliance on healthcare data projects. I am a strong communicator and team player, and I’m passionate about using AI responsibly to improve health outcomes and equity.

SKILLS

Programming & Analytics: SQL, Python (Pandas, NumPy), R
Data Visualization & BI: Power BI, Tableau, Advanced Excel, Dashboard Development, Data Storytelling
AI/ML & NLP: Predictive Modeling, Scikit-learn, Hugging Face, LLMs, Prompt Engineering
Data Engineering & Management: ETL Pipelines, Data Cleaning, Data Wrangling, Databricks, MySQL, SQL Server, PostgreSQL
Cloud Platforms: AWS , Azure , Boomi
Healthcare Data & Standards: EHR/EMR, HL7, FHIR, Healthcare Claims, Pharmacy Data, ICD-10, HIPAA Compliance.
Machine Learning & Advanced Analytics: Regression, Clustering, Scikit-learn, Predictive Modeling, Healthcare unstructured EMR data)
Collaboration & Project Practices: Agile, Scrum, JIRA, Confluence, GitHub.
Core Competencies: Stakeholder Communication, Critical Thinking, Data Governance, Problem Solving, Decision Making
Personal interests: Coding games, Videography, Photography, Traveling

PROFESSIONAL EXPERIENCE

Data Science Intern, Assuaged Foundation Inc.	Oct 2024 - Present Remote
- Engineered interactive dashboards using Power BI and Tableau to monitor diagnostic test volumes 11,000/month, specimen processing times, and quality metrics, enabling operational efficiency and informed lab management decisions. - Transformed EHR/EMR and insurance claims data using SQL, Python (Pandas, NumPy), ETL pipelines, and Git for version control, processing 24,000+ patient records quarterly for accurate lab and clinical reporting while maintaining HIPAA compliance. - Applied predictive modeling, regression, and clustering to forecast specimen processing demand, optimize phlebotomy staffing, and reduce idle analyzer capacity by 13%, improving workflow efficiency across laboratory operations. - Utilized NLP techniques with Hugging Face on 7,000 unstructured EMR and pathology notes to extract clinical insights, identify 8% high-risk patients, and support lab workflow optimization. - Integrated cloud solutions using AWS (S3, RDS, Redshift) to automate reporting pipelines, manage laboratory datasets, and improve analytics efficiency by 32%, ensuring scalable and reliable clinical operations.	
Data Analyst, Apollo Hospitals	Mar 2021 - Dec 2022 India
- Evaluated patient admissions, pharmacy, and insurance claims data using SQL and Python to identify clinical trends, improve patient throughput 10,000/month, and enhance operational efficiency across hospital departments. - Developed dashboards and automated reports with Advanced Excel, Tableau, and Power BI to track patient outcomes, ICU/ward bed utilization 83% occupancy, and departmental clinical KPIs for hospital management. - Validated EMR datasets using MySQL and PostgreSQL, performing ETL and data cleaning on 100,000+ records to support accurate hospital operational and clinical reporting. - Implemented HIPAA and ICD-10 standards and hospital governance frameworks to ensure regulatory compliance, standardized clinical and claims reporting, and maintain high-quality patient data across hospital operations. - Optimized predictive models with regression and clustering to forecast patient flow, bed occupancy, and surgery scheduling, reducing bottlenecks and improving resource allocation efficiency by 12%.	
Associate Analyst – Intern , Apollo Hospitals	Nov 2019 - Feb 2021 India
- Analyzed clinical trial, pharmacy, and insurance claims datasets 250,000+ records using R, Python, and Databricks, identifying trends that improved patient recruitment efficiency and enrollment by 18%, following CPT and DRG coding standards. - Constructed dashboards and reports using Tableau and Power BI to track 60+ clinical and operational KPIs, enabling clients to monitor trial progress and reduce reporting delays by 25 days. - Processed ETL workflows, data cleaning, and validation with SQL and Databricks to deliver reliable datasets, reducing data discrepancies by 18% across regulatory and consulting projects. - Explored predictive modeling and clustering techniques to identify trends in clinical trials and patient enrollment, improving protocol adherence and site utilization by 22 sites quarterly. - Managed collaboration using GitHub, JIRA, Confluence, Agile, and Scrum to deliver analytics solutions on time, achieving 95% ontime project delivery while ensuring governance and compliance.	

EDUCATION

Masters of Science in Data Science – Health Informatics track State University of New York,	Jan 2023 - Dec 2024
Bachelors of Engineering – Computer Science & Biotechnology Chaitanya Bharathi Institute of Technology, Hyderabad, India	Jun 2017 - May 2021

PROJECTS

Impact of COVID-19 on Liver Cancer Diagnosis and Treatment: AI Data-Driven Analysis

Tools: Python, SQL, Power BI, ML Models (SVM, ANN, Random Forest), Regression, Clustering, NLP (Hugging Face)

- Analyzed clinical datasets with Python and SQL, identifying risk factors and demographic trends for liver cancer patients impacted by COVID-19.
- Built ML models (SVM, ANN, Random Forest) with regression and clustering, achieving ~95% accuracy in classifying diagnosis periods and predicting outcomes.

Organizing Medical Transcriptions with the OpenAI API

Tools: OpenAI API, Python, SQL

Project Context: Medical transcriptions are often unstructured and time-consuming to review. This project used AI to organize and summarize transcriptions into structured formats for easier reporting and clinical use.

Key Contributions & Impact:

- I built a pipeline using Python and the OpenAI API to summarize and categorize unstructured medical transcriptions, extracting key clinical details and reducing manual review effort.
- I structured outputs into SQL tables for querying and reporting, enabling faster access to patient histories and supporting clinical decision-making.

Case Study: Mortgage Trading Analysis in Power BI

Tools: Power BI, SQL, Excel

Project Context:

Mortgage trading involves analyzing large datasets of loan performance, interest rates, and trading activity to assess risk and profitability. This project focused on building an interactive dashboard to visualize mortgage trading metrics and support data-driven decision

- I developed a Power BI dashboard with DAX measures to track trading volume, interest rate trends, and portfolio risk, giving stakeholders clear insights into mortgage performance.
- I integrated and cleaned datasets using SQL and Excel, creating calculated metrics that identified patterns in delinquency rates and profitability across mortgage segments.

CERTIFICATIONS

- Google Data Analytics
- Microsoft Power BI Essentials
- Prompt Engineering with the OpenAI API
- Boomi Data Integration and API management
- AI Integrated Machine Learning
