EDUCATION

University of California, Riverside

Master's of Science in Computer Engineering — 3.85/4.00 GPA

Riverside, CA

Sept 2024 – Dec 2025

Government College of Engineering, Gandhinagar

Bachelor's of Engineering in Computer Engineering — 8.41/10.00 GPA

Gujarat, India

Aug 2019 - May 2023

TECHNICAL SKILLS

Languages: Python, C++, Javascript, Typescript, Flutter, SQL, Golang, Bash

Tools & Frameworks: Github Actions, Helm, Numpy, Pytorch, ReactJS, Redux/Redux-Thunk, NodeJS, MongoDB

Cloud Technologies: AWS, Google Cloud, Docker, Kubernetes, Terraform, Ansible, Jenkins, Prometheus, Grafana

Skills: UNIX/Linux system knowledge, TCP/IP Networking Fundamentals, Git/Github

EXPERIENCE

Adintors Pvt. Ltd.

May 2023 – July 2024

Software Developer Engineer

Gujarat, India

- Developed a cross-platform (Android & iOS) influencer marketing application using **Flutter and GetX**, managing end-to-end campaign lifecycle from creation to **real-time analytics for over 10,000 users**.
- Improved user engagement by 40%** and **elevated campaign success rates by 15%** through intuitive design and robust feature implementation within the mobile application.
- Architected and delivered a **high-performance administrative panel with React and Redux**, providing critical tools for user, campaign, and payment management, which **boosted support team operational efficiency by 25%**.

Techfitter Solutions

Oct 2022 – April 2023

Software Developer Intern

Gujarat, India

- Initiated the development and global publication of a **custom React component library on NPM**, **accelerating feature delivery by 30%**. Simultaneously, optimized a real-time **tracking application with Uber's Kepler.gl**, **enhancing location accuracy by 20%** and **reducing incident response time by 15%** through geofencing alerts.
- Collaborated with international clients to deliver tailored software solutions, leading to a **20% increase in active users** by implementing advanced map analysis and visualization features.

J.P. Williamson Inc.

Aug 2021 – Jan 2022

Software Developer Intern

Wilmington, DE / Remote

- Designed and **deployed a scalable infrastructure on AWS** for a gaming platform, architected to handle over **100,000 concurrent users** by leveraging **AWS EC2, S3, Lambda, and DynamoDB**.
- Implemented **efficient data retrieval patterns with AWS AppSync and GraphQL**, **cutting query latency by 40%** and significantly improving platform performance. Built responsive and intuitive user interfaces with React, contributing to a highly engaging gaming experience that achieved a 4.8-star average rating.

PROJECTS

Self-Healing AI/ML Orchestration on Google Cloud | [GITHUB](#)

- Architected and deployed a **multinode self-healing AI/ML orchestration platform on Google Cloud Kubernetes**, leveraging **Google Cloud Storage, Google Cloud Repository, and Jenkins CI/CD** to automate model deployments, **reducing manual effort by 70%** and ensuring secure infrastructure management (RBAC, firewalls).
- Engineered an **innovative, LLM-driven (Gemini Flash 2.0 via Vertex AI) autonomous healing system** that processes real-time error logs from **Prometheus/Grafana alerts** to generate and execute resolution commands, **reducing critical incident resolution time by 60%** and preventing hours of downtime.
- Maintained a centralized error log repository with solutions for both automated and manually resolved issues, **improving developer debugging efficiency by 30%**.

CI/CD Pipeline for Database Application on AWS & Kubernetes | [GITHUB](#)

- Orchestrated a robust CI/CD pipeline for a **database application on AWS EC2-backed Kubernetes**, leveraging **Jenkins** for automated builds, comprehensive testing (**Maven, SonarQube** for code quality, **Aqua Trivy** for vulnerability scanning), and **reducing deployment time by 50%**.
- Streamlined artifact management and deployment consistency by **integrating Docker for immutable containerization and Nexus Repository**, **boosting deployment frequency by 3x**.
- This robust pipeline ensured rapid, reliable, and secure application delivery, **reducing critical post-deployment incidents by 20%**.
