EDUCATION

Master of Science in Computer Science

Arizona State University, Tempe, AZ.

May 2025

GPA: 3.6/4.0

Courses: Artificial Intelligence, Generative AI, Machine Learning, Distributed Systems, Operationalizing Deep Learning.

Bachelor of Technology in Computer Science

MKSSS's Cummins College of Engineering for Women, Pune, India.

June 2022

GPA: 3.8/4.0

SKILLS

Languages: Java (Core Java, Servlets, JSP), Python, C, Bash, C, C++, JavaScript, TypeScript.

Data Engineering: Apache Spark (Scala/PySpark), Azure Data Factory, Airflow, Hadoop, Kafka, SQL Server, Cosmos DB, PostgreSQL

MLOps & DevOps: Docker, Kubernetes, Jenkins, GitLab CI/CD, Terraform.

Cloud Platforms: AWS (EC2, S3, SQS), Azure (Blob Storage, Table Storage, Functions).

Databases: PostgreSQL, SQL Server, Oracle, MySQL, CosmosDB.

Big Data & ML: Spark (PySpark), Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch

EXPERIENCE

Software Engineer

February 2025 - Present

Interbiz Consulting, Tempe, AZ

- Built **Azure-based ETL pipelines** to transform IoT telemetry into **SQL Server** and Cosmos DB.
- Designed and maintained complex **SQL Server** schemas to support structured telemetry ingestion and analytics from 5,000+ IoT devices.
- Wrote over 200 optimized **T-SQL** and **MySQL** queries including complex joins, window functions, CTEs, and aggregations for dynamic reporting and performance analysis.
- Tuned queries and indexes to **reduce query runtime by 60%** on 100M+ record tables, leveraging execution plans and partitioning strategies.

Research Aide

Sep 2024 – Dec 2024

Arizona State University, Tempe, AZ

- Developed React components in **TypeScript** and integrated **Java-based** backend APIs to create scalable educational tools for **200+** users.
- Containerized application workloads with Docker and optimized deployment pipelines, **reducing release time by 35%**.
- Developed **SQL Server** views and stored procedures to enable clean data access and reduce redundancy for downstream analytics.
- Applied schema normalization and enforced integrity constraints across academic datasets **exceeding 20 million rows**.

Associate Software Engineer

July 2022 - July 2023

PricewaterhouseCoopers (PwC), India

- Developed and deployed **REST APIs and integration services** handling 2K+ concurrent requests/sec, ensuring **secure data transfer** and robust access controls across enterprise systems.
- Designed reusable **MySQL** stored procedures and ETL scripts to ingest financial transaction data from XML/JSON APIs into enterprise databases.
- Created **SQL-based validation frameworks** to detect outliers and data drift in financial metrics before quarterly reporting.

Software Engineer Intern

May 2021 - July 2021

PricewaterhouseCoopers (PwC), India

- Developed backend components using **core Java, Servlets, and JSP** to power internal workflows across 4 business units.
- Built and integrated **SOAP** and **REST** web services, improving cross-platform interoperability and reducing manual data reconciliation.

PROJECTS

Elastic Face Recognition System – AWS IaaS, PaaS, and Edge

April 2025

- Designed and deployed **distributed face recognition** leveraging **AWS Greengrass, Lambda, and SQS**.
- Built an end-to-end **pipelines** in **Python** using **PyTorch** achieving **98%** face match accuracy in production.
- Developed **infrastructure automation** with **Terraform** for GPU-enabled EC2 provisioning.

Sector-Based Trade Recommendation System

Dec 2024

- Developed a full-stack investment ML recommendation platform with **Spring Boot (Java)** and **Angular**, delivering real-time sector-based trade insights to 100+ users.
- Developed a full-stack platform that recommends trades based on market sector trends using **REST APIs and SQL queries** optimized for speed and relevance.

Predicting Startup Success (Data Lake + ML Project)

Aug 2024

- Engineered a **Spark-based ETL pipeline** to process and transform **20,000+ Crunchbase records**, generating high-quality features for predictive modeling.
- Applied feature engineering, aggregation, and encoding techniques, boosting model accuracy by **18%**.
- Built classification models with **scikit-learn**, evaluated performance with cross-validation and hyperparameter tuning.

Conversational AI Platform - NLP

April 2022

- Built a virtual banking assistant using **Flask, NLP, and MySQL**, providing automated responses across Telegram and WhatsApp platforms.
- Developed a virtual banking assistant using **NLP and MySQL**, streamlining customer support.
- Implemented scalable backend services using **Flask and BeautifulSoup**, integrated with Telegram and WhatsApp.

Carify - ML-based Web Application

Jan 2022

- Developed Random Forest and Logistic Regression models to **predict automobile maintenance needs with 92%** accuracy.
- Conducted end-to-end data preprocessing and **pipeline management**, improving the **model's efficiency by 15%**.
- Secured **2nd** place among 50 teams and earned "**Certified Potential Real Venture**" by Wadhvani Foundation.

EXTRA-CURRICULARS

- Grader: **CIS AWS, Data Visualization**, and **ABDA** (ASU, Fall 2024).
- Research: Enhancing scRNA-Seq analysis for neurodegenerative diseases (Spring'2024) and **Research Aide** (Fall'2024).
- Certifications: **AWS Certified Cloud Practitioner & Azure Data Fundamentals** (DP-900)
- Recognition: **Client Appreciation Award**, PwC India (2023).
