EDUCATION

Colorado School of Mines | Golden, CO

Master of Science: Data Science

Current GPA: 3.8 | **Expected Graduation:** December 2025

Bachelor of Science: Computer Science

Focus Area: Business

SKILLS

Programming: Python, C++, SQL, R, Java, HTML, CSS, JavaScript, ReactJS, Linux

Frameworks and Tools: TensorFlow, Databricks, Microsoft Office

Methodologies: Agile, Scrum

Soft Skills: Effective teamwork, problem-solving, time management, decision making, interpersonal skills

Certifications: IBM Data Science Professional Certificate

RELEVANT COURSEWORK

Data Science, Database Management, Advanced Machine Learning, Project Management, Operating Systems, Business Analytics

EXPERIENCE

Graduate Assistant | Colorado School of Mines Department of Computer Science, Golden, CO | August 2024 - May 2025

Supported Course: Introduction to Data Science

- Facilitated interactive office hours (3 hours/week), offering tailored support on data wrangling, statistical analysis, and machine learning fundamentals to assist students with assignments, projects, and exam preparation
- Assessed assignments and projects using detailed course rubrics, providing insightful feedback to enhance students' analytical skills and proficiency
- Strengthened communication and mentorship abilities by simplifying complex data science concepts—such as data visualization, predictive modeling, and algorithmic decision-making—into clear, accessible explanations for diverse learning styles

Application Development Corporate Internship | Cigna | May 2023 - August 2023

- Developed a strong foundation in Databricks, gaining proficiency in its core functionalities and contributing to comprehensive documentation to streamline workflows and enhance team knowledge sharing within an agile environment
- Monitored and optimized Databricks operations, ensuring seamless execution of scheduled jobs by proactively troubleshooting issues, diagnosing performance bottlenecks, and implementing solutions to maintain system efficiency
- Designed and implemented a scalable data ingestion pipeline in Databricks, integrating AWS S3 buckets and automating ETL processes to transform raw data into structured, query-ready tables, improving data accessibility and analytical performance
- Collaborated closely with product owners and team members to prioritize tasks and adapt quickly to evolving project requirements, ensuring alignment with business goals and sprint deliverables
- Actively participated in daily stand-ups and sprint planning meetings, collaborating with cross-functional teams to ensure timely delivery of data solutions while adhering to Agile methodologies

Teaching Assistant | Colorado School of Mines Department of Computer Science, Golden, CO | August 2022 - May 2023

Supported Course: Computer Science 102 Lab

- Held regular office hours (5 hours/week) to provide additional support, clarify complex concepts, and address individual learning needs, which further strengthened my computer science fundamentals
- Enhanced student learning by providing expert guidance, debugging code, and explaining key programming concepts, fostering stronger problem-solving skills and improving Python proficiency
- Supported the grading process for assignments and projects, offering detailed feedback to drive student improvement

NOTABLE PROJECTS

Field Session | Machine Learning for Time Series Pose Classification | August 2023 - December 2023

- Collaborated closely with the client, Venvee, to develop a pose classification model tailored to their datasets, ensuring the solution met specific project objectives and requirements
- Conducted in-depth research on machine learning principles and models, integrating key insights to enhance the model's accuracy and performance
- Designed and implemented a sophisticated deep learning model using TensorFlow, optimizing neural network architecture to effectively handle time series pose classification tasks
- Meticulously documented the entire project process, delivering comprehensive findings through a detailed report and a well-structured oral presentation, ensuring clarity and transparency in the results

Machine Learning | OPEN AI API | August 2023 - December 2023

- Developed a smart email assistant using the OpenAI API to draft professional emails based on user input such as subject, email, and email description, reducing manual email writing time.
- Integrated HTTP and SMTP libraries to enable seamless communication with OpenAI and automated email delivery upon user approval.
- Implemented features to auto-generate personalized signatures based on user affiliations and roles, enhancing the professionalism and consistency of outgoing messages.
