

Alekya Kudumula

BUSINESS DATA ANALYST

alekyakudumula.work@gmail.com | (203)7140190

PROFESSIONAL SUMMARY:

- Accomplished Data and Business Analyst with 6+ years of experience across investment sales, healthcare, and SaaS industries, delivering insights that drive data-backed decisions and operational efficiency.
- Expert in building interactive dashboards, automated reporting solutions, and advanced analytics models using SQL, Python, Power BI, Tableau, and Excel.
- Adept at designing robust ETL pipelines and workflows with tools such as Informatica, Alteryx, SSIS, and Apache NiFi to streamline data integration and processing.
- Deep knowledge of cloud-based data platforms, including AWS (Redshift, S3, SageMaker) and Azure (Databricks, ML), supporting scalable analytics solutions.
- Specialized in healthcare analytics involving patient risk modeling, EHR data processing, CMS compliance, and quality improvement initiatives.
- Proven track record in investment analytics for multifamily and commercial real estate, including NOI, IRR, rent roll forecasting, and hold/sell strategy modeling.
- Strong experience in SaaS product analytics with a focus on customer segmentation, churn prediction, and A/B testing for user journey optimization.
- Skilled in translating business needs into actionable data solutions through stakeholder collaboration, user story development, and agile sprint delivery.
- Experienced in developing executive-level presentations and insights that influence strategic decisions across finance, operations, and product teams.
- Consistently recognized for driving process improvement, data accuracy, and scalable reporting systems that support high-growth environments.
- Proficient in cross-functional collaboration, acting as a bridge between technical teams and business stakeholders to ensure alignment on data strategy.
- Delivered enterprise-wide data governance solutions, ensuring compliance with HIPAA, CMS, and data quality standards.
- Extensive experience in building and managing cloud-based data environments using AWS and Azure services to support analytics workloads.
- Demonstrated ability to manage project lifecycles from discovery to deployment, including backlog management, sprint planning, and delivery tracking.
- Passionate about leveraging data to optimize decision-making and build sustainable, insights-driven business ecosystems.

SKILLS:

- **Business & Investment Analytics:** KPI tracking (NOI, IRR, Cap Rates), real estate modeling, underwriting analysis, Excel-based scenario planning, CRM data analysis, portfolio performance reporting
- **Healthcare Analytics:** Patient risk scoring, CMS quality metrics, EHR data integration, readmission tracking, population health management, regulatory compliance analysis
- **Data Analysis & Scripting:** Advanced SQL (joins, window functions, CTEs), Python (pandas, NumPy, matplotlib, scikit-learn), R (statistical modeling), Excel (VBA, PivotTables, Power Query)
- **Data Visualization & BI Tools:** Tableau, Power BI, Looker, AWS QuickSight, Jupyter Notebook, Excel dashboards
- **ETL & Data Integration:** Alteryx, Informatica, SSIS, Apache NiFi, Oracle Data Integrator, REST APIs, XML/JSON data handling
- **Cloud & Big Data Platforms:** AWS (Redshift, S3, SageMaker), Azure (Databricks, ML), Apache Spark, Kafka
- **Machine Learning & Predictive Modeling:** TensorFlow, PyTorch, Azure ML, AWS SageMaker, churn prediction, A/B testing, regression/classification models
- **Version Control & Project Collaboration:** Git, SharePoint, Confluence, Agile/Scrum methodologies, Jira
- **Environments:** Linux, Windows, cloud IDEs, SQL Server Management Studio (SSMS), Azure Portal, AWS Console.

EXPERIENCE:

Client: Sterling Capital Partners, New York, NY
Role: Business Data Analyst

Dec 2023 to Till date

Roles & Responsibilities:

- Delivered high-impact Power BI dashboards for investment and finance teams, visualizing key real estate KPIs including NOI, IRR, and rent trends.
- Automated market intelligence reports using SQL and Python, supporting data-driven acquisition and disposition decisions.
- Integrated financial and CRM data sources to enrich underwriting models and valuation processes.
- Partnered with senior stakeholders to define business requirements, streamline reporting, and increase transparency across portfolios.
- Built custom ETL pipelines using Alteryx and SQL, reducing manual effort and enabling standardized reporting across investment assets.
- Conducted requirements gathering sessions with investment, asset management, and finance teams to identify reporting gaps and translate them into dashboard and data model requirements.
- Created and managed user stories, backlog, and sprint planning artifacts in JIRA to ensure timely delivery of BI tools aligned with business needs.
- Defined and documented KPIs and data definitions for internal performance metrics, enhancing consistency across executive reporting.
- Facilitated stakeholder meetings to present insights and recommend data-driven strategies related to acquisitions, dispositions, and asset performance tracking.
- Acted as liaison between business and technical teams to ensure analytics solutions were aligned with operational workflows and strategic goals.

Environment: SQL, Power BI, Python, Excel, CoStar, Alteryx, AWS Redshift

Client: Novus Health Group, Chicago, IL
Role: Healthcare Analyst

Dec 2022 to Nov 2023

Roles & Responsibilities:

- Developed predictive models using AWS SageMaker and R to identify high-risk patients and prioritize outreach.
- Designed Tableau dashboards for readmission analysis, chronic care monitoring, and quality metric reporting.
- Integrated EHR, claims, and third-party data sources into unified analytics pipelines using Informatica.
- Automated compliance tracking for CMS reporting, reducing manual review time by 50%.
- Conducted gap analysis and business requirement gathering sessions with clinical operations and population health teams to translate care delivery needs into analytical solutions.
- Created SQL-based data marts and reporting layers to support patient stratification, value-based care analytics, and HEDIS performance tracking.
- Supported the implementation of patient engagement strategies by analyzing social determinants of health and risk segmentation.
- Partnered with IT and privacy teams to ensure HIPAA compliance in all data architecture and analytics workflows.
- Contributed to predictive analytics playbooks and knowledge bases, improving onboarding for future analysts and care teams.

Environment: Tableau, SQL, R, Python, AWS SageMaker, Quick Sight, Informatica, SharePoint.

Client: Nexora Tech Solutions, Austin, TX.
Role: Data Analyst

Mar 2021 to Aug 2022

Roles & Responsibilities:

- Created automated dashboards and reports in Power BI and Jupyter for tracking product KPIs and customer behavior.
- Built ML models in Azure ML and TensorFlow to forecast churn, predict engagement, and drive customer

segmentation.

- Supported A/B testing and experimentation analytics, advising on UX and feature development based on data insights.
- Migrated legacy reporting tools to Azure Databricks, reducing latency in customer behavior queries by 40%.
- Collaborated with cross-functional teams across engineering, marketing, and customer success to deliver timely analytics.
- Conducted stakeholder interviews and translated business requirements into technical specifications and analytics solutions.
- Developed SQL queries and ETL jobs for ingesting, transforming, and analyzing product usage data from various third-party integrations.
- Designed self-service reporting portals and dashboards to empower non-technical teams to make informed decisions independently.
- Tracked and reported on key SaaS metrics such as MRR, CAC, CLV, activation rates, and feature adoption trends.
- Presented monthly analytics updates to executive leadership, recommending optimizations based on user journey analysis and product feedback.

Environment: Power BI, SQL, Azure ML, TensorFlow, Python, Azure Databricks, Jupyter, Confluence.

Client: Data Bridge Solutions Pvt. Ltd., Hyderabad, India.

Jan 2018 to Mar 2021

Role: Data Integration Analyst

Roles & Responsibilities:

- Developed scalable ETL workflows using SSIS, Apache NiFi, and Oracle Data Integrator to consolidate data from finance, sales, and operations systems into centralized data marts.
- Designed and implemented real-time data pipelines using Apache Kafka for fraud monitoring, transaction alerts, and operational dashboards.
- Wrote complex transformation logic for cleansing and standardizing structured and semi-structured data in XML and JSON formats.
- Built REST API-based integrations with third-party platforms to ingest external vendor and client data into internal systems.
- Automated batch processes for regulatory compliance and operational analytics, improving reporting timelines by 35%.
- Partnered with data analysts and business teams to align data pipeline outputs with analytical needs and performance KPIs.
- Managed code repositories with Git and maintained technical and process documentation in Confluence for long-term project visibility.
- Tuned Linux-based ETL execution environments for high-volume processing, enhancing system performance and reliability.

Environment: SSIS, Oracle Data Integrator, Apache NiFi, Kafka, REST APIs, XML, JSON, Git, Linux, Confluence.

EDUCATION:

- Bachelors of Computer's and Science Engineering, 2017.
