Summary

Mid-level software developer with solid full-stack and cloud engineering background. Delivered responsive front-end components for a multi-format form-building application and built end-to-end machine learning pipelines on AWS SageMaker, integrating data preprocessing, model optimization, and deployment. Proficient in JavaScript, React, Node.js, Python, and AWS services such as EC2, S3, and CloudFormation. Eager to leverage this blend of development and cloud expertise to create scalable, high-performance solutions for the organization.

EDUCATION

FLORIDA ATLANTIC UNIVERSITY

Jan 2024 - Dec 2025

Master of Computer Science, Computer Science

- **GPA:** 3.90/4.00
- **Coursework:** Analysis of Algorithms, Natural Language Processing, Cloud Computing, Cloud Security, Information Retrieval, Internet of Things

SNIST

Jun 2019 - May 2023

Bachelor of Technology, Information Technology

- **GPA:** 7.98/10.00

TECHNICAL SKILLS

- **Programming:** Python, C++, JavaScript, Java, C#, C
- **Web Development:** React.js, Node.js, Express.js, Spring Boot, Django, HTML, CSS, Bootstrap
- **Databases & Cloud:** PostgreSQL, MongoDB, AWS
- **Tools & Version Control:** Git, GitHub, VS Code, Postman
- **Data Science & AI:** Machine Learning, NLP, TensorFlow, OpenCV, Generative AI (LLMs, LangChain)

WORK EXPERIENCE

Aroopa

Software Developer Intern

Telangana, India · Aug 2023 - Oct 2023

- Contributed to a multi-format form-building application by developing responsive frontend features (JavaScript, HTML, CSS) and integrating backend APIs with Node.js/Express, which improved user experience across devices and reduced formsubmission errors
- Collaborated in an Agile team, performed bug fixes, debugging, and unit testing, and worked with MongoDB/SQL for data persistence, resulting in fewer reported bugs and faster data retrieval for the application

Amazon AWS

AI-ML Virtual Internship

2021 - 2022

- Applied machine learning workflows on AWS with SageMaker, S3, and Lambda to train and deploy TensorFlow models, enabling automated scaling of inference services
- Implemented data preprocessing using Pandas and NumPy, optimized models with TensorFlow hyperparameter tuning, and built cloud deployment pipelines in AWS, improving model readiness for production

AWS Virtual Internship

Jan 2021 - Mar 2021

- Built and deployed smallscale Python applications on EC2 instances, stored data in S3, managed access with IAM, and automated provisioning using CloudFormation, resulting in a functional prototype that demonstrated endtoend cloud workflow
- Studied cloud architecture, scalability, and security best practices and applied them to design a resilient deployment model, improving the project's ability to handle increased traffic

PROJECTS

Jobby App

- Developed a job portal clone with JWT authentication and REST API integration for job listings and profiles. Implemented protected routes, reusable React components, and ensured a responsive UI.
- Enhanced reliability with robust error handling and secure authentication flow.

Generative AI Map Application with LLM integration

- Developed a map centric urban navigation tool using Streamlit, Postgres/PostGIS and Google Gemini Pro LLM to process natural language queries and deliver accessibility-focused geospatial insights.
- Improved usability by integrating demographic datasets and accessibility resources, and enhanced query accuracy through schema standardization and template-driven LLM queries.

Solana Web3 Payment Integration

- Developed a decentralized payment module enabling seamless SOL transactions using Phantom Wallet and Solana Web3.js, including wallet connection, transaction signing, and on-chain confirmation.
- Optimized the frontend-blockchain workflow by implementing secure transfer logic, robust error handling, and a clean UI for real-time transaction feedback on Solana Devnet.

Used Car Price Prediction

- Developed a user-friendly interface to capture vehicle details and predict selling price using Decision Tree Regressor model.
- Integrated a SQL database to store both user inputs and predicted selling prices, enabling data persistence and future analysis

CERTIFICATIONS

- **AWS Academy Graduate:**Cloud Foundations, Cloud Architecting and Machine Learning Foundations
- **Certified as Smart Coder:**Smart Interviews
