PROFESSIONAL SUMMARY

Analytical and results-driven Data & Business Analyst with 4 years of experience leveraging SQL, Python, Power BI, and Tableau to deliver actionable insights and optimize decision-making. Skilled in predictive modeling, data visualization, and process automation, with a strong record of improving operational efficiency, enhancing customer engagement, and driving revenue growth across technology, healthcare, and fintech domains.

PROFESSIONAL EXPERIENCE

Streamer Stakes

Dec 2024 - May 2025

Business Data Analyst

Remote

- Enhanced leadership decision-making as measured by a 20% increase in BI tool adoption by stakeholders, through development of interactive dashboards and data storytelling during quarterly business reviews.
- Improved reporting efficiency by 30% by automating workflows with SQL and Python scripts, cutting manual preparation time and ensuring timely delivery of critical insights to cross-functional teams.
- Generated an 18% lift in in-game purchases by leveraging AI-driven predictive analytics through Google BigQuery, optimizing campaign timing, pricing models, and targeted promotions to maximize ROI.
- Delivered a 25% boost in revenue tracking accuracy by designing Power BI dashboards integrated with Azure Data Services, providing executives real-time KPIs that supported better monetization and growth strategies.
- Delivered a 25% boost in revenue tracking accuracy by designing Power BI dashboards integrated with Azure Data Services, providing executives real-time KPIs that supported better monetization and growth strategies.

Ananda AI

Aug 2024 - Dec 2024

Business Intelligence Analyst

New York city, NY

- Optimized model accuracy by refining feature engineering and validating results against market benchmarks, raising forecasting reliability and reinforcing data-driven decision-making.
- Delivered scalable BI solutions by integrating predictive models with SQL and Tableau dashboards, providing analysts with faster scenario analysis and enabling leadership to evaluate multiple strategies.
- Improved risk management by 25% by applying R-based statistical modeling to mitigate false signals, reducing potential losses and strengthening portfolio resilience in volatile markets.
- Increased trading decision accuracy by 35% by developing a cryptocurrency signal analysis system in Python, applying ML algorithms to real-time Bitcoin and Ethereum data to identify optimal trade opportunities.
- Achieved a 40% reduction in customer response time by creating an LLM-powered chatbot with TensorFlow, automating support workflows and delivering instant, personalized responses that improved satisfaction rates.

UConn Health

Aug 2023 - Jul 2024

Data Analyst

Farmington, CT

- Delivered compliance-ready datasets by implementing robust validation checks, ensuring alignment with healthcare data privacy regulations and increasing audit accuracy during regulatory reviews.
- Generated measurable process efficiency gains by streamlining ETL pipelines, resulting in faster turnaround for high-priority requests and enabling data teams to handle a 20% higher workload.
- Reduced reporting time by 25% by developing Python automation scripts and Alteryx workflows, accelerating delivery of financial and operational insights for executive reviews.
- Enhanced stakeholder engagement by 15% by creating Tableau and Alteryx dashboards that simplified complex datasets into intuitive, actionable visualizations for clinicians and administrators.
- Improved data accuracy by 30% through rigorous SQL-driven validation and Alteryx-based quality assurance, reducing reporting errors and delivering reliable insights for healthcare research teams.

Cognizant Technology Solutions Inc

Aug 2022 - Jul 2023

Business Analyst

Des Moines, IA

- Generated executive-ready reporting dashboards with Power BI, creating transparency in project metrics and enabling leadership to prioritize high-value initiatives more effectively.
- Optimized cross-team communication by facilitating Agile ceremonies, ensuring alignment between developers, testers, and product managers, which accelerated release cycles by 15%.

- Delivered a 20% improvement in user satisfaction by collaborating with UI/UX teams to redesign the corporate website with Adobe XD, reducing navigation errors and elevating digital engagement.
- Increased data integrity by 35% by refining SQL and Python-based validation processes, enabling more accurate analytics for decision-making and operational performance.
- Reduced software defects by 28% by leading a Jira-based QA program, implementing defect tracking workflows that improved testing rigor and ensured higher product reliability.

Cognizant Technology Solutions Inc

Oct 2021 - Jul 2022

Programmer Analyst

Des Moines, IA

- Enhanced Agile project delivery by documenting test cases and defect resolution processes, improving sprint velocity and reducing QA bottlenecks by 18%.
- Achieved a 20% drop in website-related incidents by performing systematic debugging and performance testing with Facet Technology, ensuring consistent platform performance.
- Delivered a 15% boost in UI/UX performance by revamping company websites with HTML, CSS, JavaScript, and React, resolving functional issues and modernizing the user experience.
- Improved data accuracy by 30% through SQL-based validation and Python cleansing scripts, identifying critical errors early and ensuring compliance-ready datasets for healthcare clients.
- Reduced healthcare software defects by 25% by implementing automated Selenium and TestNG testing alongside JIRA workflows, improving reliability across multiple applications.

PROJECTS

Paycheck Protection Program Database using SQL

- Improved query performance by 30% by optimizing SQL scripts and integrating Power BI dashboards with Excel models, enabling stakeholders to conduct faster financial insights and decision-making.
- Designed and managed a relational database with 10 entities using SQL Server and ETL pipelines, achieving 95% data integrity and ensuring accurate financial reporting for compliance-driven loan analysis.

Time Series Forecasting for Electricity Generation in the U.S. States using SAS

- Enhanced model performance by 10–15% by leveraging RMSE and AIC evaluation metrics, delivering actionable energy forecasting insights that supported resource planning across states.
- Developed custom time series models in SAS and Python that achieved 85% forecasting accuracy, incorporating customer count and economic indicators to improve predictive reliability.

TECHNICAL SKILLS

- **Programming Languages:** Python, Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, R, Java, C, C++, Hive, Rest APIs, UI/UX, Hadoop
- **Data Analytics Tools:** SQL, Power BI, Tableau, SQL Server Management Studio, JMP, SAS studio, Alteryx, Kafka, Flunk
- **Data Proficiencies:** Data Cleaning, Validation, Transformation, Analysis and Visualization, Requirements gathering, Predictive Modeling
- **Project Management:** MS Project, SDLC, Agile Methodologies, JIRA, Kanban, Scrum, PMO, Project Coordination, TDD, Six Sigma
- **Documentation:** Microsoft Office Suite, Word, Excel, Visio, PowerPoint, Access, G-suite, Confluence

EDUCATION

University of Connecticut, School of Business

Aug 2023 – May 2025

Master of Science, Business Analytics and Project Management

Hartford, CT

- **GPA:** 3.7/4
- **Achievements:** Concentration: Data Science

Andhra University College of Engineering

Aug 2018 - May 2022

Bachelor of Technology in Electronics & Computer Engineering

Visakhapatnam
