PROJECTS

Human Resource Management & Information System (HRMIS)

Gomal University - Project

Dec 2016

- HRMIS web application was designed to streamline and automate various human resource (HR) management tasks. It centralizes HR-related data and processes, making it easier for organizations to manage their workforce efficiently.
- This web-based application developed on PHP for front-end and MySQL for back-end.

Web Application Project (Full-Stack Project)

Simplilearn project

Nov - 2024

- Designed and Developed using modern technologies including but not limited to HTML5, CSS3, JavaScript, Bootstrap, Java and Spring-boot.
- Containerized & deployed the application using Docker, Jenkins and AWS EC2 Instances.
- Developed the application to handle bookings and passenger profile data for a travel company using Microservices and API frameworks.
- Built the infrastructure to host software on AWS EC2 instances for a travel company to have online data access for booking cabs and passenger profile.
