

Java Full Stack Developer

Professional Summary

- Senior Java Full-Stack Developer with 3+ years of experience in analysing, designing, developing, and testing **Object-Oriented applications** using **Core Java/J2EE, Spring Boot, Microservices, AWS, TypeScript, ReactJS, Angular, and Python**, with a strong focus on **financial platforms**.
- Highly skilled in **Agile methodologies** such as **SCRUM, Test-Driven Development (TDD), incremental development, iterative delivery, and SDLC-based Agile development and testing**.
- Collaborated closely with **business stakeholders and cross-functional teams** to deliver **mission-critical financial applications** on schedule.
- Experienced in building, testing, and deploying **enterprise applications** on **Windows, Linux, and UNIX** environments using IDEs like **Eclipse, NetBeans, and IntelliJ**.
- Collaborated closely with business stakeholders and cross-functional teams to deliver mission-critical financial applications on schedule.
- Developed **Single Page Applications (SPAs)** using **React JS** to enhance overall user experience.
- Utilized **React JS** to create single-page applications (SPAs) for improved user experience.
- Developed **high-performance backend APIs** using **Rust** and its **memory-safe architecture** to minimise runtime failures.
- Implemented **asynchronous programming** in Rust using **tokio** for improved I/O operations.
- Built **scalable server-side applications** using **Node.js**, improving responsiveness and overall system performance.
- Created **RESTful APIs** using **Node.js and Express**, enabling smooth communication and efficient data handling between services.
- Designed **scalable data pipeline solutions** in **Scala** for data transformation and integration processes.
- Designed and implemented **fault-tolerant distributed systems** in **Scala** for big data applications.
- Promoted **Agile best practices** and automated **CI/CD pipelines**, significantly improving release speed and reliability.
- Strong understanding of **design patterns** including **DAO, Session Façade, Business Delegate, Service Locator, DTO, and Singleton**.
- Proven experience in developing **enterprise-grade integrations, SDKs, and API-driven solutions** for customer-facing products.
- Implemented **Adobe Experience Manager (AEM)** multisite and multilingual capabilities for global content delivery.
- Strong background in **UI development** using **React, Angular, and pure JavaScript** implementations.
- Experience in **Microservices, Pivotal Cloud Foundry, and Engagement** using **Spring Boot**.
- Strong experience in **Spring Framework modules** such as **Spring Core, Spring DAO, Spring IOC, Spring MVC, Spring ORM, Spring AOP, Spring Boot, Spring Netflix, and Spring Web Flow**.
- Developed and optimized **enterprise search functionality** using **Apache Solr and Lucene**, handling large-scale indexing across millions of legal and financial documents.
- Implemented **Semantic Search** techniques to improve contextual relevance of search results in compliance and research platforms.
- Integrated **Dense Vector Search** using **neural embeddings** to enhance document ranking and discovery across regulatory datasets.

- Engineered intelligent **query understanding** and **content classification pipelines** using advanced NLP techniques such as **named entity recognition** and **dependency parsing**.
- Leveraged **LLMs** to create **document summarisation systems** that extracted key insights from SEC filings and legal texts.
- Built complete **RAG pipelines** combining precise retrieval with generative models for dynamic answer generation.
- Designed and deployed **Question Answering Systems** using a hybrid of **BM25** and **vector-based retrieval** to answer user-specific financial queries.
- Experience in using **Apache Spark** for large-scale data processing, batch and streaming analytics.
- Good knowledge of **Angular directives** to create reusable elements and attributes, along with easy-to-test and maintain client-side interactivity in web applications.

Technical skills:

- **Backend Programming Languages:** Java, Golang, Python, C, C++
- **Web Technologies:** HTML5, CSS, JavaScript, Marko, TypeScript, jQuery, Angular.JS, React.js, Nodejs, Ajax
- **Java/J2EE Technologies:** J2EE, JDBC, Servlet, JSP, JavaBeans, Struts, Hibernate, Mockito, Spring, Log4j, XML, JMS, JNI, Junit, Web Services and Custom Tags
- **Tool & Frameworks:** Spring (MVC, AOP, ORM, Web Service, DAO), Hibernate ORM 5.0.2, Struts, Spring Boot, Spring Batch, Spring DATA, Spring security
- **Web Servers:** Apache Tomcat, Web Logic, JBoss
- **IDEs:** IntelliJ, Eclipse, NetBeans, IBM Rapid Application Developer (RAD)
- **Databases:** Oracle, DB2, MS SQL Server 2000, My SQL 5.0, MS Access, MongoDB
- **Machine Learning / Data Science:** TensorFlow, Pandas, NumPy, Find tuning
- **Message Brokers:** Kafka, Rabbit MQ, Active MQ, IBMMQ, TIBCO
- **DevOps Tools:** Jenkins, Docker, and Kubernetes
- **Cloud Computing:** Amazon EC2, Amazon S3, Amazon RDS, AWS Lambda, Amazon SQS, AWS Identity and access management, AWS CloudWatch, Amazon EBS, and other services of the AWS family.
- **Protocols:** TCP/IP, HTTP, FTP, and SOAP
- **Web services:** Rest (JAX-RS), SOAP (JAX-WS), GraphQL, AEM, Sling.
- **Version Control Tools:** SVN, Git, CVS, TFS
- **Operating Systems:** Windows, Linux, UNIX
- **Cloud AWS:** EC2, S3, RDS, Lambda, CloudWatch, IAM, SQS, SNS, Elastic Beanstalk, Elastic Search, VPC
- **GCP:** Compute Engine, Cloud Storage, Big Query, Fire store, Cloud Functions, Cloud Run, GKE, Pub/Sub, Cloud IAM
- **CI/CD:** Jenkins, AWS Code Pipeline, Google Cloud Build, GitLab CI/CD
- **Infrastructure as Code:** Terraform, CloudFormation
- **Logging & Monitoring:** Elasticsearch, Kibana, Splunk, CloudWatch, Log4j, Slf4j, Grafana
- **Methodologies:** Agile, Waterfall, SDLC

Professional Experience:

FINRA New York, NY
Java Full Stack Developer

May 2024 – Present

Responsibilities:

- Designed, developed, and maintained **regulatory compliance systems**, ensuring **high availability, scalability, and security** for applications handling **broker-dealer supervision, market event monitoring, and dispute resolution processes**

- Developed **market surveillance service** to process and analyze **billions of daily trading events**, enabling **fraud detection, misconduct identification, and compliance reporting**
- Used **Eureka as service discovery, configuration server** to externalize the application configuration for different **microservices**
- Implemented **RESTful APIs** and documented using **Swagger/OpenAPI**, streamlining integration with internal **microservices** and **frontend apps**
- Worked with **Docker for containerization** and **AWS for cloud-based deployments**, ensuring **scalable and reliable application hosting**
- Individual application developed with **Spring Boot in Microservices Architecture**
- Deployed **Spring Boot-based microservices as Docker containers on AWS** using **EC2 Container Services** and the **AWS Management Console**
- Worked closely with **frontend teams** to integrate **REST APIs**, ensuring **seamless data flow** and **enhanced user interaction**
- Utilized **Hibernate ORM** to streamline **database operations** and improve **application performance and data persistence**
- Integrated modern **frontend frameworks** such as **Vue.js** with backend services to deliver **unified and responsive user experiences**
- Implemented **secure authentication and authorization in Golang** using **JWT and OAuth2**, ensuring adherence to **enterprise security standards**
- Designed and maintained **CI/CD pipelines with Jenkins** to automate **build, testing, and deployment processes**, significantly improving **development efficiency**
- Created customized **Amazon Machine Images (AMIs)** from existing **EC2 instances** for **backup, scaling, and disaster recovery purposes**
- Managed **scalable and high-performance database schemas** using **Amazon RDS for MySQL** and **DocumentDB for JSON data**, combined with **Vue.js and Node.js** for rich user interfaces
- Developed **real-time class schedule tracking systems** using **Node.js and Socket.io**, demonstrating strong proficiency in **MySQL and MongoDB administration**
- Built **real-time event processing solutions** with **Node.js and Kafka** for **live schedule updates and monitoring**
- Integrated **Golang microservices** with **Kafka and RabbitMQ** for **asynchronous message handling** to enhance **system decoupling and resilience**
- Leveraged **AEM's drag-and-drop authoring and responsive grid features** to build **flexible, scalable page templates** aligned with **business requirements**
- Improved **application performance** through thorough **code reviews, debugging, and optimization** to achieve **faster load times** and **better responsiveness**
- Contributed to **predictive analytics features** by developing **data pipelines** and integrating **machine learning models** into **microservices** for **real-time insights** in **customer booking and vehicle management systems**
- Designed and managed **CI/CD pipelines** using **Jenkins and GitHub Actions** to fully automate **build, test, and deployment workflows**
- Leveraged **Docker, Kubernetes, and Terraform** to **standardize deployments, automate infrastructure provisioning, and ensure consistent environment management**
- Worked on **high-performance data processing and multithreaded programming**, with experience applicable to **Scala-style concurrency and parallel computation models**
- Integrated **backend services** with multiple **databases** and implemented **data retrieval using AJAX and JSON** for **seamless front-end communication**
- Monitored and analyzed **service performance** using **Grafana** and the **ELK Stack** for both **Java and Golang applications**
- Enhanced **backend stability and performance** by optimizing **Python-based microservices** for **improved efficiency**

- Authored **Terraform modules** to provision **AWS S3 buckets**, enforce **security controls**, and support **Lambda-based application architectures**
- Developed **serverless Node.js REST APIs** running on **AWS Lambda** to improve **customer transaction processing** and reduce **operational overhead**
- Deployed applications on **cloud platforms** including **AWS and Google Cloud**, utilizing **cloud-native services** to achieve **high scalability and reliability**
- Collaborated with **cross-functional teams—design, marketing, and product management** to gather **requirements** and deliver **high-quality technical solutions**

Environment: Virtualization, Linux, Continuous Integration and Continuous Delivery (CI/CD), Data Analysis, Project Management, Postgres, MongoDB, Agile Methodologies, Python (Programming Language), Test Strategy, AEM, Sling, Java JEE, Spring Boot, Hibernate, Test Automation, Junit, Web Services, Test Automation Framework, Software Development Life Cycle (SDLC), SQL, Rest, Kafka, Zookeeper.

Capgemini, India
Java Developer

Dec 2021 – Jul 2023

Responsibilities:

- Built **microservices** for **Seller & Listing Management** in a **Capgemini-led client project**, delivering features like **batch uploads**, **custom store categories**, and **dynamic product listing interfaces**
- Built **RESTful APIs** with **Spring Boot** to fetch and manage **product research data**, **competitor trends**, **pricing history**, and **sales insights for sellers**
- Developed **core application components**, including **Spring Forms**, **Controllers**, **JSP views**, **business logic**, and **data access layers** using **Hibernate Entities**, **Spring-Hibernate DAO**, and **Spring Models** within the **MVC architecture**
- Designed and built **RESTful Web Services** using **Spring Boot** for efficient communication between **distributed components**
- Developed **end-to-end application features** using **Spring**, **JSP**, **HTML**, **CSS**, **JavaScript**, and **Servlets**, and deployed the application on **Apache Tomcat**
- Worked with **TypeScript** and **modern JavaScript features (ES5/ES6)** to enhance **frontend functionality** and **code maintainability**
- Utilized **AJAX**, **JSON**, and **jQuery** for **data requests**, **dynamic UI updates**, and **efficient response handling**
- Participated in **effort estimation** and implemented **change requests** on top of the existing application with **minimal impact** and **high code quality**
- Leveraged **Spring Framework** for **Dependency Injection** to improve **modularity**, **testability**, and **maintainability** of the application
- Developed **business logic** using **POJOs** with clear separation of concerns between **service**, **controller**, and **data layers**
- Created **Spring components** including **Controllers**, **Validators**, **Resource Mappings**, **Session Attributes**, and **Model Attributes** using annotations; implemented **URL mappings** to serve **customized views** using various **templates**
- Wrote **SQL queries** and **stored procedures** for **DAO layers** and executed them through **Hibernate** for **seamless ORM-based data access**
- Developed **complex queries**, **mapped persistent classes**, and maintained **Hibernate mapping files** for **efficient database interaction**
- Worked with **Oracle Database**, writing **SQL statements**, **stored procedures**, and optimizing **database access for performance**

- Extensively used **Hibernate annotations, mapping configurations, and HQL/criteria queries** for robust **database operations**
- Utilized **ANT scripts** for **automated builds, packaging, and deployment** of the entire application
- Followed **Git version control best practices** and used **Log4j** for detailed **application logging and debugging**
- Contributed to **low-level design (LLD)**, **test strategies**, and developed **application modules** following **Agile methodologies**
- Developed **interactive UI components** using **HTML, jQuery, React, and JavaScript**; used **AJAX** for **service communication** and built **modular, reusable web components** for **scalable UI development**

Environment: Spring 3, Hibernate, J2EE, REST, Oracle 11g, JSP, JSF, jQuery, CSS, HTML, Eclipse, Linux, SQL, POJOs, DAO, Log4j, ANT, GIT, Junit, JavaScript, React.js, Tomcat Application server 8.0, JMS, JDK 1.8, JSF, AJAX.

Certifications -

- Java, Spring Boot, and Microservices (Coursera)
- Google Cloud Certified (Credly)

Education

Masters in Computer Science, Pace University, NY
