

Summary

Detail-oriented Data Analyst with 4+ years of experience in data cleaning, analysis, reporting, and business insights. Strong expertise in SQL, Python (Pandas, NumPy), Excel, and BI tools like Tableau and Power BI. Experienced in diagnosing business fluctuations, supporting decision-making and building automated analytical reports.

Skills

- **Programming Languages:** Java, Python, C, C++
- **Libraries And Frameworks:** NumPy, SciPy, Pandas, Matplotlib
- **Web Technologies:** Excel, R, HTML, CSS, JavaScript, Django
- **Tools And Platforms:** GitHub, Git, Jira, Spira, Eclipse IDE, Visual Studio, Jenkins, Tableau
- **Databases:** MySQL, Oracle
- **Operating Systems:** Ubuntu, Windows
- **Technologies And Methodologies:** Machine Learning Algorithm, Data-Analytics, NLP
- **Courses:** Data Structures and Algorithms (DSA), Database Management Systems

Certifications

- **AWS:** Associate Developer [Link](#)

Work Experience

GAO Tek Inc | Data Analyst

May 2024 – Present

- Designed SQL queries and Python scripts to build automated reporting pipelines, eliminating repetitive manual work.
- Built dashboards using Tableau to provide visibility into KPIs, customer engagement, operational efficiency, and conversion trends.
- Diagnosed short-term (daily), medium-term (weekly), and long-term (quarterly) data fluctuations, identifying root causes and proposing corrective actions.
- Collaborated with operations, marketing, and product teams to gather business requirements, define KPIs, and validate data quality.
- Created monitoring scripts integrated with Jenkins for scheduled business reports and alerting workflows.
- Communicated insights to business leaders in a clear, structured manner improving decision-making and process optimization.

TCS | Data Analyst

Aug 2022 - Dec 2022

- Extracted, cleaned, and transformed large datasets using SQL and Python to create consistent analytical datasets for business reporting.
- Built operational dashboards using Tableau/Excel to track performance, throughput, and service SLAs.
- Worked with Kafka streaming data to analyze real-time events and system behavior, enabling quicker incident response.
- Conducted weekly thematic analysis on volume trends, latency changes, and workflow performance deviations.
- Identified root causes for medium-term inefficiencies and proposed solutions to engineering and operations teams.
- Used Log4j2, Splunk, and CloudWatch to extract insights and detect anomalies.
- Built operational dashboards using Tableau and Excel.
- Processed real time data streams using Kafka for performance monitoring and reporting.
- Delivered analysis to product and client teams in Agile sprints.

DXC | Data Analyst

Jan 2021 - Jul 2022

- Built automated Excel + Python-based dashboards to support leadership visibility into delivery quality and productivity metrics.
- Performed full lifecycle data analysis including requirement gathering, data extraction, cleaning, modeling, and reporting.
- Created performance and defect trend reports for internal tools.
- Analyzed operational, development, and QA datasets to identify patterns in defects, performance bottlenecks, and sprint delivery metrics.
- Extracted insights from Jira/Spira data and presented findings to engineering teams.
- Participated in SDLC phases to support analytical requirement gathering.

Education

University of North Texas at Denton

Master's in Advanced Data Analytics,

Jan 2023 - May 2024

Denton, TX

Dayananda Sagar University

BE Computer Science and Engineering,

Aug 2017 - May 2021

Bengaluru, India

Projects

AI Powered Psychiatric Chat Bot

Jan 2021 - Apr 2021

- A chatbot for mental health driven by AI that integrates Flask and machine learning.
- The web program focuses on mental health concerns in India, evaluates individual risk factors, and provides predictions-based treatments.
- By utilizing state-of-the-art technology, the user-friendly platform closes the treatment gap by offering cognitive behavioral therapy at a

reasonable cost.

Twitter Sentiment Analysis Dashboard | NLP

Jan 2021 – Feb 2021

- Extracted live tweet data using API, processed with Python, and performed sentiment classification.
- Built an interactive dashboard to visualize **topic clusters, trend peaks, sentiment changes**, and influencer impact.
- Enabled real-time monitoring of customer voice and public perception.
