📞 (908) 315 2350 | ✉ amulya@quickitmail.com | [in amulya-dirisala](https://www.linkedin.com/in/amulya-dirisala)

Professional Summary

Full Stack Developer with over 4 years of experience building scalable, high-performance web applications and microservices in fast-paced, Agile environments. Proficient in designing robust backends with Python (Django, Flask, FastAPI) and Java (Spring Boot, Spring MVC), coupled with dynamic, responsive frontends using React.js and Angular. Adept at developing secure APIs, optimizing system performance, and implementing CI/CD pipelines to deliver quality software on time. Recognized for bridging the gap between frontend and backend, ensuring seamless user experiences, maintainable codebases, and business value-driven solutions.

Education

Master of Science in Cyber Security

May 2024

Saint Peter's University, NJ, USA

Skills

Programming & Query Languages: C, C++, Java, Python, JavaScript, SQL, NoSQL

Front End: HTML5, CSS3, Tailwind CSS, jQuery, Ajax, XML, React.js, Angular, Redux, Restful API

Back End: Spring Boot, Spring MVC, Spring REST, Spring Security, Spring Data JPA, Django, Flask, FastAPI

Testing and Tracking: Junit, PyTest, Mockito, Postman, Confluence, JIRA

Cloud: AWS (S3, EC2, Lambda, Cloud Formation, API Gateway, SQS/SNS, EKS), Azure

Database: MySQL, PostgreSQL, MongoDB, Redis, Elasticsearch, Oracle DB

Project Management & Methodologies: Jira, Trello, Asana, Microsoft Project, SDLC, Agile/ Scrum, Waterfall, TDD

CI/CD and Tools: Maven, Gradle, Git, GitHub, GitLab, Jenkins, GraphQL, Docker, Grafana, Kubernetes, Kafka

Work Experience

Goldman Sachs Group

Jan 2024 – Current

Full Stack Developer

USA

- Redesigned and migrated legacy JavaScript-based internal trading dashboards to React.js, implementing reusable components and optimizing state management with Redux and Context API; improved front-end performance by 35% and reduced maintenance effort by 25%, enabling quicker feature rollouts for trading operations.
- Delivered multiple high-performance RESTful microservices using Spring Boot and Spring Data JPA to streamline risk reporting and portfolio management modules, reducing response latency by 30% and increasing scalability for real-time financial data processing.
- Built secure RESTful APIs with Spring MVC to support mission-critical workflows like client account onboarding, trade execution, and compliance tracking; reduced API-related defects by 25% and accelerated feature delivery by 40% in alignment with regulatory deadlines.
- Integrated JWT token logging and monitoring into the ELK stack (Elasticsearch, Logstash, Kibana), enhancing traceability of authentication workflows and cutting resolution time for access-related incidents by 40% in compliance-sensitive environments.
- Leveraged AWS services (EC2, S3, CloudWatch) to deploy and monitor cloud-hosted microservices supporting trade analytics, improving scalability and availability to meet peak market demands while maintaining 99.99% uptime SLAs.
- Contributed to high-performing Agile Scrum teams by facilitating sprint planning, backlog grooming, and cross-functional collaboration using Jira, which improved sprint predictability and boosted team velocity by 20% across consecutive quarters.
- Implemented unit and integration testing frameworks with JUnit and embedded them into CI/CD pipelines via Jenkins, GitLab CI/CD, and GitHub Actions, reducing deployment errors by 50% and improving confidence in production releases for client-facing applications.

Intex Technologies

Jan 2021 – Sep 2023

Full Stack Developer

India

- Established interactive and responsive front-end interfaces using Angular, emphasizing modern UI/UX principles, which enhanced user engagement by 40% and reduced bounce rates on key enterprise dashboards.
- Built robust backend services using Django, Flask, and FastAPI to deliver scalable RESTful and asynchronous APIs, paired with Angular-based responsive frontends to improve usability and reduce load times by 25%.
- Deployed and optimized Azure-hosted environments for Python microservices, implementing load balancing and proactive monitoring strategies that ensured 99.9% uptime during peak demand.
- Introduced full-text search capabilities with Elasticsearch, enabling efficient query performance over millions of indexed records, enhancing user search experience and reducing latency by 40%.
- Developed a comprehensive suite of automated test cases with PyTest, achieving 95% coverage and cutting production defects by 30%, strengthening overall release quality.
- Streamlined CI/CD pipelines within GitLab by adding parallel testing, automated code reviews, and deployment gates, shortening delivery timelines for new features by 50% and boosting team throughput.
- Upgraded legacy Flask modules to FastAPI, modernizing the service architecture for better concurrency and cutting server response times by 20%, while simplifying ongoing feature enhancements.
- Involved in Agile Scrum teams by actively participating in sprint planning, daily stand-ups, reviews, and retrospectives, contributing to improved cross-functional collaboration and increasing sprint velocity by 20%, ensuring timely delivery of key features.
