## EXPERIENCE

|                                                            |                                              |
|------------------------------------------------------------|----------------------------------------------|
| Business Analyst (Sales and Marketing Analytics)<br>Kroger | October 2023 - Present<br><i>Remote, USA</i> |
|------------------------------------------------------------|----------------------------------------------|

- Developed dashboards for ad campaign analytics using SQL and Tableau, identifying target customers through data-driven insights, resulting in a 12% increase in campaign-driven revenue.
- Optimized existing dashboards by implementing database indexing and query enhancements, leading to a 22% reduction in report database response times and improving overall efficiency.
- Designed a Thanksgiving product campaign dashboard by analyzing historical sales data and demographic trends, improving targeting accuracy by 18% and contributing to higher sales.
- Created an evaluation matrix to assess the accuracy of the 2023 Thanksgiving sales report, leading to a 17% improvement in identifying top-performing products compared to the previous year.
- Authored comprehensive documentation detailing project requirements, analytical methodologies, and business decisions to streamline future analysis and ensure strategic alignment.

|                                                                     |                                     |
|---------------------------------------------------------------------|-------------------------------------|
| Business Analyst (Energy Sector Analytics)<br>Hexaware Technologies | Aug 2019 - Jul 2021<br><i>India</i> |
|---------------------------------------------------------------------|-------------------------------------|

- Contributed to a major European electrical company's project by maintaining dashboards that consolidated customer profiles and purchase history, thereby enhancing CRM decision-making and increasing upsell opportunities by 28%.
- Supported the analysis of peak electricity usage by maintaining a dashboard that enabled customers to adjust their consumption patterns and reduce their bills by an average of 10% while optimizing grid load management during high-demand periods.
- Assisted in the development and maintenance of a real-time reporting system that provided hourly insights into electricity consumption, improving grid health management and reducing strain by 16%.
- Improved customer satisfaction by 25% through the implementation of data-driven dashboards that personalized billing plans and provided proactive customer support, resulting in reduced monthly bills.

## PROJECTS

**E-commerce Sales Data Warehouse Implementation.** Implemented an Amazon Redshift data warehouse to manage and analyze large volumes of e-commerce sales data, optimizing queries to reveal insights into sales trends and customer behavior.

**Energy consumption Monitoring and Optimization.** Developed a Power BI dashboard using SQL to analyze and monitor energy consumption patterns across multiple buildings, enabling distribution efficiency.
