## SUMMARY

Business / Data Analyst with 3+ years of experience across AI, semiconductor, automotive, and technology domains. **Experienced in** requirements gathering, documentation, Agile delivery, and **ERP/CRM systems** (SAP S/4HANA, Salesforce, Oracle NetSuite). **Skilled in SQL, Python (Pandas), Excel, and BI tools (Power BI, Tableau, Looker Studio)** for data validation, forecasting, and reporting. Proficient with **Snowflake, AWS, Azure, PostgreSQL, and SQL Server** to support automation, anomaly detection, and predictive modeling.

## PROFESSIONAL EXPERIENCE

### Business / Data Analyst | Humanitarians AI | USA

January 2025 – Present

- Spearheaded **requirements gathering and documentation (BRD, FRD, user stories)** with **cross-functional teams**, ensuring alignment on **multi-agent AI market research platform** scope and saving **15 hours per sprint** in rework.
- Engineered **SQL and Python** workflows integrated with **AWS S3 and Snowflake** to validate and transform **LLM/VLM ensemble evaluation datasets**, enabling stakeholders to access **3 curated datasets** for analytics.
- Facilitated **stakeholder workshops** and **process mapping sessions** using **Jira and Confluence**, strengthening communication and delivering **6 process improvements** adopted by leadership.
- Designed **dashboards in Power BI and Tableau** to track **resource allocation** and **project outcomes**, giving program managers visibility into **25+ key impact, evaluation, and testing metrics** for decision-making.

### Business / Data Analyst | Veeco Instruments | USA

January 2024 – July 2024

- Orchestrated **KPI tracking and reporting** using **SQL and Excel** to monitor production throughput for **LSA and IBD tools**, enhancing visibility across engineering and operations and delivering **10 automated weekly performance reports** to senior leadership.
- Optimized **inventory and supply chain dashboards** in **Power BI** by integrating **ERP data**, supporting cross-functional teams in logistics and **procurement**, resulting in reduced order delays by tracking **5 critical supply bottlenecks**.
- Facilitated **process improvement workshops** with engineering and quality teams, leveraging process mapping and **documentation (BRD, use cases)**, strengthening collaboration and enabling **3 standardized workflows** adopted across manufacturing sites.

### Business Analyst | Tata Motors | India

January 2021 – July 2022

- Consolidated **sales, revenue, and production throughput data** from **SAP ERP and Excel** into **monthly analytics reports**, enabling **marketing managers** to resolve **4 regional revenue bottlenecks** and recover **20 hours of lost time** monthly.
- Developed **Power BI dashboards** connected to **SAP ERP procurement and quality modules**, giving **supply chain and marketing leaders** visibility into **15 inventory and defect metrics**, reducing **fleet downtime cost**.
- Redesigned **specification documentation** using **UML diagrams** and structured **BRD templates**, aligning **R&D** with **customer requirements** and standardizing **2 validation workflows** for new **vehicle components**.
- Facilitated **cross-departmental planning sessions** with **finance, supply chain, marketing, and engineering teams**, delivering **3 actionable initiatives** that synchronized **launch schedules** with **quality checkpoints**.
- Introduced **demand forecasting models** in **SQL and Excel** for upcoming **vehicle launches**, enabling **planners** to anticipate **3 model rollouts** with accurate **part ordering** and smoother **execution**.

### Business Analyst Intern | Dell Technologies | India

August 2020 – January 2021

- Devised automated **Power BI dashboards** connected to Dell's logistics warehouse, delivering **8 recurring executive insights reports** that enhanced visibility for global supply chain leaders and informed strategic planning.
- Captured requirements from IT service teams using **Jira and Confluence**, documenting workflows and delivering **3 automation features** that streamlined backlog refinement and reduced cycle inefficiencies across operations.
- Validated manufacturing and service order data with **SQL-driven anomaly checks**, resolving **5 recurring data issues** and ensuring reporting accuracy while identifying **\$50,000 annual savings** through Excel-based cost modeling.

### Business Analyst | Amazon | India

February 2020 – July 2020

- Gathered **business requirements** from **logistics and operations teams**, defining **reporting enhancements** and ensuring alignment across **4 regional fulfillment centers**.
- Developed **KPI dashboards** in **Amazon QuickSight and Excel**, consolidating **1.2M+ daily package records** to provide **40+ managers** with actionable visibility into **delivery performance**.
- Validated **operational datasets** using **SQL** to detect **anomalies** and improve **data quality**, enabling planners to **reallocate 300+ weekly shifts** and reducing **delivery costs by \$100K monthly**.

## TECHNICAL SKILLS

**Requirements & Documentation:** BRD, FRD, SRS, user stories, use cases, process mapping, wireframes

**Stakeholder & Project Management:** Communication, facilitation, negotiation, Jira, Confluence, Trello, Aha!, Visio, Lucidchart

**CRM & ERP:** Salesforce, SAP S/4HANA, Oracle NetSuite

**Compliance & Governance:** HIPAA, GDPR

**Methodologies:** Agile, Scrum, SDLC, UAT

**Programming & Data Tools:** SQL, Python (Pandas), Excel (PivotTables, Power Query, VBA)

**Business Intelligence & Visualization:** Power BI (DAX), Tableau, Looker Studio

**Databases:** PostgreSQL, SQL Server, Snowflake

**ETL & Integration:** SSIS, Azure Data Factory, data mapping, workflow automation

**Cloud Platforms:** AWS (S3, Redshift, Lambda), Azure Synapse, Azure Data Lake

## PROJECTS

### Integrated Financial Forecasting: AAPL Stock and Sentiment Analysis

- Built forecasting ensembles (RNN + Transformer, Auto ARIMA + Prophet + custom NN) on 30K+ AAPL stock records from Alpha Vantage, processed with Pandas, and compared in Streamlit to deliver accuracy insights.

### Enhanced Snowflake Database Exploration through Text-to-SQL: Livability Analysis

- Developed a Snowflake + Snowpark pipeline with Python UDFs, deployed on GCP, and integrated with OpenAI + LangChain in Streamlit, enabling text-to-SQL queries on livability data across 6 U.S. cities.

## EDUCATION

Master of Science — Computer Software Engineering | Northeastern University | Boston, MA

2024

Bachelor of Engineering | Thapar University | India

2020
