SUMMARY

Java Full Stack Developer with 4+ years of experience designing and developing **distributed** systems and high-performance **microservices** using **Java**, **Spring Boot**, and **RESTful APIs**. I am skilled in containerization (**Docker**, **Kubernetes**), **CI/CD**, and event-driven architectures with **Kafka**. Strong expertise in performance optimization, **system resilience**, and security for large-scale, mission-critical applications. Experienced in cloud platforms (AWS), NoSQL databases including **MongoDB** and **Cassandra**. Proficient in all phases of SDLC and Agile Scrum methodologies.

TECHNICAL SKILLS

Programming Languages: Java 8/11/17, Python, JavaScript

Frameworks & Libraries: Spring Boot, Spring Batch, Hibernate, React.js, Angular 16/JS, Redux, SpringWebflux

Databases: Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, PL/SQL

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Azure DevOps, Docker, Kubernetes, Jenkins, GitLab CI/CD, Maven, Gradle

Monitoring & Logging: Prometheus, Grafana, ELK Stack

APIs & Integration: RESTful APIs, Microservices, Apache Kafka, OAuth2/Spring Security

Testing & QA: JUnit, Mockito, Selenium, SonarQube

ETL & Data Processing: Talend, Python scripts for automation, data transformation, log parsing

Methodologies: Agile Scrum, CI/CD, Microservices Architecture, Event-driven systems

PROFESSIONAL EXPERIENCE

State Farm | *Java Full Stack Developer*

Aug 2024 – Present

Roles & Responsibilities:

- Designed and deployed **distributed microservices** using Java 17, Spring Boot, and REST APIs, ensuring **high scalability and reliability** for large-scale insurance systems.
- Designed and deployed **containerized microservices** using Docker and Kubernetes, improving **scalability, reliability, and system resilience** while reducing downtime during deployments.
- Built modern, responsive front-end components with **React.js**, enhancing policy management and customer service applications.
- Implemented **AWS (EC2, S3, RDS, Lambda)** solutions for cloud-native applications, improving system uptime and reducing infrastructure costs by **20%**.
- Automated **CI/CD pipelines** with **Jenkins** and GitLab, streamlining deployments and ensuring consistent delivery of new features in alignment with **SDLC best practices**.
- Developed **Python** scripts for compliance automation and reporting, cutting manual audit efforts by **40%** and boosting data accuracy.
- Implemented **OAuth2**-based authentication for REST APIs and React.js applications, enabling secure token-based access and protecting sensitive data.
- Integrated **Apache Kafka and Cassandra** for event-driven, real-time data streaming and **high-volume transaction processing**, improving system throughput and stability.
- Worked with **MongoDB** and **PostgreSQL** for scalable, efficient management of structured and semi-structured insurance data.
- Ensured high application quality through **JUnit**, **Mockito** unit testing and **Selenium** UI automation.
- Played a key role in migrating legacy insurance systems to a **microservices architecture**, improving operational efficiency and reducing request processing time by **45%**.
- Optimized performance and resilience** by implementing caching strategies, asynchronous processing, and fault-tolerant patterns, reducing response times by **45%**.

LTI Mindtree | *Software Engineer*

June 2021 – July 2023

Roles & Responsibilities:

- Developed full-stack features for enterprise applications using **Java**, **Spring**, **Hibernate**, and **PL/SQL**, streamlining backend workflows and strengthening application security.
- Optimized **Oracle** queries and stored procedures, applying indexes and partitions to handle large-scale data validation and transformation, improving processing speed by **30%**.
- Built and maintained frontend modules with **React.js/Redux** for new features and **AngularJS** for legacy systems, ensuring responsive and consistent user experiences.

- Designed **RESTful APIs** and integrated them with dynamic web interfaces, enhancing interoperability and reducing response times by **30%**.
- Implemented secure authentication and authorization using **Spring Security** and **OAuth2**, improving compliance with enterprise data security standards.
- Created **Node.js-based** backend services for lightweight API endpoints and integrated them with React frontends.
- Automated QA processes by creating test frameworks with **Java Selenium WebDriver**, eliminating 80 hours of manual testing effort per sprint.
- Enhanced code quality by writing unit tests with **JUnit** and **Mockito** and applying static analysis with **SonarQube**, reducing production defects and improving maintainability.
- Developed **Python** utilities for log parsing, regression testing, system monitoring, and DevOps automation (artifact validation, cleanup routines, environment health checks).
- Spearheaded a data validation framework using **Spring Batch**, automating validation workflows and cutting processing time by **40%**.
- Optimized performance and ensured system resilience for **microservices** by implementing caching strategies, fault-tolerant mechanisms, and **monitoring** with **ELK** dashboards.
- Built microservices with **Spring Boot** and integrated asynchronous event-driven messaging using **Apache Kafka**, enabling real-time transaction processing.
- Containerized and orchestrated microservices with **Docker** and **Kubernetes**, enabling scalable and reliable deployments.
- Utilized **AWS (EC2, S3, Lambda)** for cloud-native hosting while managing CI/CD pipelines in **Azure DevOps** with **Git, Maven, and Gradle**, accelerating release speed and improving reliability.
- Collaborated in **Agile Scrum** teams, contributing to cross-functional development, automation, and secure API integrations.

Harman | Junior Software Engineer

May 2020 – May 2021

Roles & Responsibilities:

- Developed and maintained scalable **RESTful APIs** using **Python** and **JavaScript**, improving API response times by **30%** and ensuring reliable integration across client applications.
- Collaborated with backend teams to optimize **MySQL** schemas and data models, enabling high-volume transaction processing for client platforms.
- Designed and delivered responsive UI components using **React.js** and **CSS3**, enhancing usability and improving customer-facing dashboards.
- Built and optimized **ETL pipelines with Talend** to ingest, clean, and transform client operational data, improving accuracy and reducing processing times by **25%**.
- Implemented **security best practices** (authentication, authorization, access control) to protect sensitive client data and ensure compliance.
- Supported application hosting and scalable storage using **AWS (EC2, S3)**, improving performance and availability for client workloads.
- Automated deployments with **Jenkins** and **Maven**, reducing deployment time by **40%** and minimizing manual release errors.
- Developed and optimized **Java-based microservices** to support client business logic, improving scalability and maintainability of the solution.

EDUCATION

University of Cincinnati

Master of Science in Information Technology

Cincinnati, OH

Aug 2023 - Dec 2024
