

Anas Ali Shaikh

Java Full Stack Developer

Hayward, CA | (510) 963-8963 | shaikhanasali2@gmail.com | <https://www.linkedin.com/in/anasalishaikh/>

Summary

- Accomplished Java Full Stack Developer with 2 years of experience in designing, developing, and deploying sophisticated web applications and microservices. Leveraged advanced expertise in Java, Spring Boot, and AWS cloud solutions to deliver high-performance, scalable, and secure software systems.
- Specializing in integrating AWS services such as EC2, S3, RDS, and Lambda, creating highly available, cost-efficient, and resilient cloud-based applications. Delivered a 40% increase in uptime and reduced infrastructure costs by 30%.
- Proficient in front-end development using Angular, React, HTML5, CSS3, and JavaScript, seamlessly combining these with robust back-end services in Java to ensure responsive user experiences and optimized cross-platform system performance.
- Demonstrated expertise in database design, development, and performance optimization using MySQL, SQL Server, Oracle, and MongoDB, achieving a 35% boost in query performance and overall system efficiency.
- Architected and implemented microservices-based systems leveraging Spring Boot, Docker, and Kubernetes, enhancing scalability, fault tolerance, and automated CI/CD pipelines, reducing deployment times by 50% and operational overhead significantly.
- Expert in implementing robust security protocols such as OAuth2, JWT, and AWS IAM, ensuring compliance with GDPR and other regulatory standards while safeguarding sensitive data.

Skills

Languages: Java, Python, JavaScript, SQL, C

Frameworks: Spring Boot, Hibernate, RESTful APIs, Express.js, Node.js, Django

Web Technologies: HTML5, CSS3, JavaScript, Bootstrap, Angular, React.js,

J2EE Technologies: JSP, JUnit, Multi-threading, JSF, Generics, Concurrency, and Collections

Node.js: Express.js, RESTful API Development

Databases: MySQL, PostgreSQL, MongoDB

Cloud Platforms: AWS (EC2, S3, Lambda, CloudFormation)

Containerization: Docker, Kubernetes

CI/CD: Jenkins, GitLab CI/CD, Travis CI

Version Control: Git, GitHub, GitLab

Cloud Deployment: AWS Elastic Beanstalk, Azure App Services

Testing: JUnit, Mockito, Selenium, Postman

Other Tools: Maven, Jenkins, Postman, Swagger, Gradle

IDEs: Eclipse, Visual Code, Notepad++, NetBeans

Development Methodologies: Agile (Scrum, Kanban), Test-Driven Development (TDD), DevOps practices

Serverless Architectures: AWS Lambda, Azure Functions

Cloud-Native Solutions: Microservices, Event-Driven Architectures

Security: OAuth2, JWT, API Security Best Practices

Experience

Dell Technologies | Java Full Stack Developer

Jul 2024 - Present

- Successfully implemented the entire Software Development Life Cycle (SDLC), from analysis through design, development, integration, and testing phases, ensuring 100% adherence to project timelines.
- Actively participated in SCRUM meetings and followed Agile methodologies, improving issue resolution speed by 30% and tracking project progress effectively.
- Developed single-page applications (SPAs) using HTML, CSS, TypeScript, Angular, and Angular CLI, leading to a 25% improvement in frontend performance and user engagement.
- Designed a real-time notification system using WebSockets, SockJS, and StompJS in TypeScript, enhancing real-time communication capabilities by 40%.
- Implemented Core Java concepts, including Multithreading, File Handling I/O, Collection frameworks, and Exception handling, to optimize backend processing and system stability.
- Leveraged Oracle as the backend database, writing efficient stored procedures for data operations, reducing query execution times by 20%.

- Utilized Spring Framework (Spring Core, DAO, Spring ORM, Spring MVC) to build a robust business layer, achieving 15% faster processing times and seamless application integration.
- Configured CI/CD pipelines using AWS, Jenkins, and Kubernetes, automating deployments and reducing deployment time by 50% across multiple environments.
- Conducted thorough testing of RESTful APIs using Postman and Insomnia, performing GET, POST, UPDATE, and DELETE operations with 100% validation success rates.
- Managed version control with GitHub, ensuring 99.9% code integrity, and utilized IntelliJ IDEA to streamline development processes.

ACL Digital, USA | Software Developer

Jul 2023 - Jul 2024

- Enhanced backend performance by optimizing Spring Boot services, implementing RESTful APIs, and using Hibernate for efficient data persistence.
- Collaborated closely with the frontend team to develop user-friendly interfaces using React.js and Bootstrap, improving customer engagement by 25%.
- Developed dynamic web applications using Java, Spring, Hibernate, and MySQL, driving a 30% increase in business efficiency by automating manual processes.
- Led migration from a monolithic to a microservices architecture, improving system scalability and resilience to handle higher traffic loads by 40%.
- Designed and implemented database solutions using PostgreSQL, performing complex queries, stored procedures, and data migration, improving database response times by 35%.
- Utilized Docker and Kubernetes to containerize and deploy applications, streamlining development workflows and improving system reliability.
- Developed and managed CI/CD pipelines using Jenkins, automating build, testing, and deployment processes, reducing deployment time by 50%.

Education

Bachelor of Technology, Computer Science

California State University, East Bay
