EDUCATION

Northeastern University | Master of Science, Software Engineering Systems (Security Concentration) **May 2025**
Courses: Communication & Network Security, Linux Security for Networking, Database Systems

Anna University | Bachelor of Engineering, Computer Science and Engineering **May 2021**
Courses: Cryptography & Networking, Operating Systems, Data Structures, Distributed Systems

TECHNICAL SKILLS

Programming: Python (Flask, Fast API), Go, C#, JavaScript (Node.js, React), Bash, KQL
Security: Burp Suite, Metasploit, Nmap, OWASP ZAP, Wireshark, Penetration Testing, VAPT, OSINT, YARA
Cloud: AWS (IAM, WAF, Security Groups, S3, Lambda), Azure Sentinel, Terraform, DevSecOps
Infrastructure: Linux/Unix, Windows, Docker, Kubernetes, Git, Jupyter
Databases: MySQL, PostgreSQL, MongoDB

EXPERIENCE

Microsoft | Redmond, WA **May 2025 – August 2025**

Security Researcher Intern | Threat Actor Pursuit (TAP) Team

- Analyzed 18 security incidents involving nation-state threat actors, mapped attack TTPs and delivery methods, built automated triage system reducing incident response time from 6 hours to 3 hours per case.
- Analyzed 500+ malware samples using static analysis tools and hash verification, refined Windows Defender detection signatures improving accuracy by 25% and preventing 200+ false alerts daily.
- Developed Python data correlation scripts processing threat intelligence feeds, discovered 47 undocumented C2 domains linked to active APT groups supporting law enforcement takedown efforts.

IoT Open Innovation Lab at Northeastern University | Boston, MA

Aug 2023 – May 2025

Security Research Assistant

- Conducted penetration testing on student job marketplace using OWASP Top 10, discovered 10 critical vulnerabilities including time-based SQL injection and remote code execution, securing platform before production deployment.
- Integrated OAuth security review into SDLC workflow, identified authorization scope escalation in third-party integrations and implemented PKCE validation preventing unauthorized data access for 1,000+ students.
- Developed automated S3 bucket scanner using Python Boto3, discovered 27 publicly exposed buckets containing sensitive data and applied least-privilege IAM policies with CloudTrail monitoring.

DigiAlert | Chennai, India

Oct 2021 – May 2023

Associate Security Analyst | Red Team

- Discovered HTTP request smuggling vulnerabilities through CL.TE payload manipulation during VAPT assessments, bypassed WAF protections and reduced testing time from 8 to 5 hours through automated Python exploitation scripts
- Identified ARP cache poisoning across 15 network subnets through Wireshark analysis, implemented micro segmentation policies preventing lateral movement attacks
- Secured hybrid infrastructure by configuring zero-trust SAML SSO with Palo Alto policy chaining, eliminating east-west traffic exploitation vulnerabilities
- Deployed AWS WAF blocking 500+ malicious requests monthly while maintaining sub-200ms application response times for client systems

Outamation | Chennai, India

Feb 2021 – Sep 2021

Cloud Security Engineer

- Architected secure AWS migration using HSM key escrow and FIPS 140-2 encryption, ensuring compliance during on-premises to cloud transition
- Configured Kubernetes admission controllers with runtime monitoring preventing container breakouts, doubled deployment speed while securing production workloads
- Built Terraform automation reducing provisioning time to 15 minutes, eliminated S3 misconfiguration vulnerabilities through policy scanning.
- Optimized application performance with Nginx load balancing and ModSecurity rules, achieved 40% faster response times while blocking injection attacks.

PROJECTS

- RADAR:** Built C# threat intelligence platform aggregating IOCs from AlienVault OTX, Abuse.ch, and MITRE ATT&CK APIs, implemented infrastructure pivot detection and cross-source correlation identifying shared C2 infrastructure between APT groups.
- ZapScan:** Built automated vulnerability scanner using Python FastAPI with custom payload generation, integrated OWASP ZAP proxy for comprehensive web application security testing.
- PortPatrol:** Engineered high-performance network scanner using Go goroutines for concurrent TCP scanning, achieved sub-second port enumeration across large network ranges
