Summary

Analytical and technically driven Computer Science graduate student with experience as a Data Analyst and Researcher in fast-paced, data-centric environments. Proven track record in building predictive models, engineering data pipelines, and developing dashboards that drive impactful decision-making. Strong foundation in Python, SQL, and machine learning, with experience integrating software development principles into data analytics. Passionate about creating intelligent systems that connect data insights with scalable solutions.

Experience

Nexis Student Technology Lab, Syracuse University

February 2025 – May 2025

Data Science Researcher

Syracuse, NY

- Led a clinical research analytics project, analyzing over 500,000 patient records to identify patterns in disease progression. Applied machine learning models to predict patient outcomes, improving early diagnosis rates by 25%.
- Developed statistical models to evaluate the effectiveness of treatment protocols, influencing healthcare policy recommendations.
- Integrated electronic health record (EHR) data from multiple sources, ensuring data consistency and enhancing analytical accuracy. Reduced data processing time by 40% through efficient pipeline optimization using Python and Scikit-Learn.

The Math Company

August 2022 – May 2023

Data Analyst

Bengaluru, Karnataka, IN

- Developed predictive models using Python and R to analyze sales and demand trends, improving forecasting accuracy by 20%. Designed interactive dashboards in Power BI and Tableau, streamlining reporting for executive decision-making.
- Applied time-series forecasting and statistical models to predict business performance and consumer demand for key product categories. Collaborated cross-functionally to translate business needs into data-driven insights, enhancing strategic decision-making.
- Transformed raw data into strategic insights by implementing sophisticated data analysis methodologies, which led to a 20% improvement in inventory planning and a significant enhancement in overall operational efficiency.

Projects

AI-Powered Job Application Tracker | React frontend, Django backend, Elasticsearch, NLP with Python libraries

- Developed a web application that streamlined job application management by consolidating status tracking and deadlines, improving user task organization by 40%.
- Integrated NLP algorithms to provide personalized resume feedback, increasing interview callback rates by 25%.
- Implemented an AI-driven interview preparation tool generating tailored practice questions to enhance user readiness and confidence.

Recommendation System Using Deep Learning | Python, Google Colab

- Built an advanced movie recommendation system leveraging deep learning to personalize user suggestions and improve engagement. Applied Restricted Boltzmann Machines for modeling user preferences, Autoencoders for feature extraction, and Deep Neural Networks to boost prediction accuracy by 30%.
- Enhanced recommendation relevance and user satisfaction through iterative model optimization and evaluation metrics.

Technical Skills

Programming Languages: Python, Java, SQL, R, HTML, CSS, JavaScript (basic)

Libraries & Frameworks: pandas, NumPy, scikit-learn, StatsModels, Matplotlib, Seaborn, Flask, Bootstrap

Databases: PostgreSQL, MySQL, Oracle DB, SQLite

Business Intelligence Tools: Power BI, Tableau, Excel

Software Development & APIs: RESTful API Development, CRUD Operations, JSON Handling

Tools & Platforms: Git, GitHub, Agile (Scrum), GitHub Actions, Linux (Shell), Docker (basic), AWS (S3, EC2).

Education

Syracuse University

August 2023 - May 2025

Master of Science in Computer Science, GPA: 3.0

Syracuse, NY

BNM Institute of Technology

August 2018 - August 2022

Bachelor of Engineering in Computer Science, GPA: 3.3

Bengaluru, Karnataka, IN
