

ANIRUDH TALLURY
DATA ANALYST

New Jersey (Open to Relocate), USA | (201)-777-4430 | Email: talluryaa@gmail.com | LinkedIn

SUMMARY

- Around 4 years experience leading data analytics projects in healthcare and finance, leveraging SQL, Python, and statistical methods to deliver insights that improved operational efficiency by 25%.
- Developed interactive dashboards and BI reports using Tableau and Power BI to visualize KPIs and financial metrics, enabling stakeholders to make data-driven decisions and enhancing reporting accuracy by 30%.
- Engineered scalable data pipelines and ETL workflows using Informatica, Talend, AWS Redshift, and Snowflake on cloud platforms like AWS and Azure, improving data processing speeds and supporting real-time analytics across cross-functional teams.

EDUCATION

Master of science in Data Science: New Jersey Institute of Technology, Newark, New Jersey. GPA- 3.8
Bachelor of Technology in Computer Science and Engineering: Institute of Aeronautical engineering, Telangana, India. GPA- 3.5

TECHNICAL SKILLS

Data Management and Databases:	SQL NoSQL (MongoDB, Cassandra), ETL Processes
Programming Languages:	Python (Pandas, NumPy, Matplotlib, Seaborn), R, SAS
Data Visualization:	Tableau, Power BI, Excel (Advanced, VBA)
Data Warehousing	Amazon Redshift, Snowflake, Google Big Query
Statistical Analysis & Machine Learning:	Statistical Software (SAS, SPSS), TensorFlow, Scikit-learn, Data Mining
Cloud Platforms:	AWS, Azure, (AWS Certified Cloud Practitioner)
Data Processing and ETL Tools:	ETL Tools (Talend, Informatica, SSIS), Apache Airflow
Other Technical Skills & Soft Skills:	Data Quality Tools (Alation, Talend), Data Warehousing Data Governance, Data Security Practices (Encryption, Masking), Data Privacy Laws (GDPR, HIPAA), Epic, Cerner, Healthcare Data Standards (ICD-10, CPT, HL7), Crystal Reports, SSRS (SQL Server Reporting Services), Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Process Mapping, Solution Oriented, Ad Hoc Analysis, Project Management, Data Presentation, Requirement Gathering, Root Cause Analysis, Data Storytelling, Communication Skills, Critical Thinking, JIRA, Problem-Solving.

WORK EXPERIENCE

Data Analyst | Johnson & Johnson, New Jersey **Aug 2024-Present**

- Delivered a predictive analytics initiative using R, SQL, and Snowflake to model patient risk trajectories across chronic conditions, enhancing resource allocation and care stratification across 40+ facilities in alignment with value-based care objectives.
- Developed anomaly detection pipelines using PySpark and MLflow to monitor abnormal utilization patterns in outpatient data; accelerated intervention timelines and prevented overutilization incidents, saving \$800K in unnecessary treatment costs annually.
- Orchestrated cloud-native ETL workflows on Azure Data Factory to integrate lab results, vitals, and imaging records; increased refresh frequency from weekly to daily and ensured high-fidelity ingestion of structured and unstructured health data.
- Constructed compliance dashboards using Tableau to monitor CMS quality metrics and readmission benchmarks; empowered leadership with real-time visibility into program gaps, achieving 100% reporting adherence for three consecutive quarters.
- Automated payer contract validation audits using SSIS and Redshift, surfacing discrepancies between reimbursement rates and payment terms; enabled resolution of claims underpayment issues worth \$2.5M over one fiscal year.
- Analyzed EHR usability by mining user-interaction logs via MongoDB, identifying physician workflow pain points and reducing charting time by 17% through streamlined UI enhancements and form redesigns.
- Visualized patient journeys using Matplotlib and Seaborn to highlight diagnostic delays and care handoff issues; supported care redesign efforts that reduced diagnosis-to-treatment lag by 22% for oncology services.
- Collaborated with medical directors, actuaries, and informatics specialists to co-design intervention strategies backed by stratified outcomes analysis, driving a 9% improvement in chronic condition control rates and boosting quality incentive attainment.

Data Analyst| Infosys, India **Jan 2021 – Aug 2023**

- Directed financial analytics programs using SQL, Python, Tableau, Azure Synapse, SSIS, and Power BI to support credit risk modeling, liquidity forecasting, fraud detection, and regulatory compliance across high-value client portfolios.
- Consolidated multi-platform banking data using Azure Data Factory, enabling unified reporting pipelines; shortened monthly close cycles by 28% and enhanced reporting accuracy across treasury, audit, and capital markets divisions.
- Created Power BI dashboards to visualize asset allocation, cash flow volatility, and portfolio exposure by geography and sector; delivered real-time risk insights that supported more agile financial decision-making across institutional accounts.
- Transformed payment exception monitoring using Apache Airflow and Redshift, integrating audit controls and alerting frameworks; reduced manual error checks by 40% and enabled real-time compliance alignment for transaction operations.
- Compiled reconciliation metrics using Excel VBA macros to detect general ledger mismatches across clearing accounts; enhanced exception management and improved month-end financial integrity in compliance with SOX regulations.
- Synthesized call center and transaction metadata using SAS and Pandas to evaluate service-channel efficiency; informed process automation opportunities that decreased customer service escalations by 21% and improved satisfaction scores.
- Facilitated third-party data ingestion pipelines via Informatica Cloud to support real-time fraud surveillance; enabled dynamic anomaly flagging that increased fraud detection accuracy by 18% and cut response lag by 35%.
