PROFESSIONAL SUMMARY

- Business Analyst with 2+ years of hands-on experience in data workflows, process improvement, and cross-functional collaboration, supported by a strong technical foundation in SQL, Python, Tableau, and Excel.
- Skilled in analyzing and documenting business requirements, building data-driven solutions, and ensuring end-to-end system accuracy.
- Experienced in ETL pipelines, KPI dashboards, and model development, transforming business needs into actionable analytics and system specifications.
- Passionate about leveraging analytics, process design, and governance principles to improve reliability, transparency, and operational efficiency within large-scale organizations.

SKILLS

- **Languages & Tools:** Python, SQL, Tableau, PostgreSQL, Excel, SPSS, Jupyter Notebook
- **Libraries/Frameworks:** pandas, NumPy, scikit-learn, Matplotlib, Seaborn, Gradio, GPT (OpenAI), LLaMA (Meta), DeepSeek
- **Analytics:** Feature Engineering, Predictive Modeling, Classification, KPI Dashboards, Survey Analytics
- **Other Tools:** Git, Google Forms, Hugging Face, Microsoft 365

PROJECTS

University Projects – *Illinois Institute of Technology*

Tableau Mini Projects (Jan 2025 – April 2025)

- Designed interactive dashboards using LOD calculations, dual-axis charts, and parameterized filters.
- Applied WINDOW functions for YoY and MoM comparisons and set actions for dynamic segment views.
- Created executive KPI boards for sales, customer churn, and traffic accident datasets.
- Optimized dashboards using data source filters and calculated fields to reduce rendering lag.

Environments: Tableau, Microsoft Excel

Heart Disease Prediction (March 2025 – April 2025)

- Performed data preprocessing: encoding, scaling, null-checks, and outlier treatment using sklearn & pandas.
- Trained and compared SVM, Decision Tree, and KNN classifiers for prediction accuracy.
- Evaluated F1-score and precision-recall trade-offs to identify optimal classification approach.
- Visualized correlation heatmaps and SHAP-like interpretations for model transparency.

Environments: Jupyter Notebook, Python (scikit-learn, numpy, pandas, seaborn, matplotlib), Microsoft Excel, Microsoft 365

University Projects – *Amity University*

A Study on The Potential Role of Blockchain in Human Resources (Jan 2022 – April 2022)

- Created a Research Report by designing and distributing structured surveys using Google Forms to collect over 150 responses.
- Analyzed Likert-scale and categorical data using SPSS for correlation matrices.
- Generated insights on blockchain adoption challenges in HR with statistical evidence.
- Proposed integration strategy using smart contracts and blockchain ledger authentication.

Environments: Google Forms, SPSS, Microsoft Excel, Microsoft Word

Personal Projects

Credit Card Fraud Analyzer (July 2025)

- Engineered features such as transaction frequency, geolocation mismatch, and hour-of-day using pandas.
- Developed classification models using logistic regression, decision trees, and random forest with scikit-learn.
- Used class weighting and threshold tuning to handle imbalanced data, focusing on maximizing recall without inflating false positives.
- Deployed confusion matrices and ROC curves to evaluate model effectiveness.

Environments: Jupyter Notebook, Python (scikit-learn, numpy, pandas, seaborn, matplotlib), Microsoft Excel, Microsoft 365

PROFESSIONAL EXPERIENCE

Assistant Operations Manager at *All Things Pet*, New Zealand, *Hybrid* (Nov 2021-Oct 2023)

- Developed Excel-based KPI tracker using pivot tables and lookup functions for performance monitoring.
- Automated weekly inventory reporting using Python scripts to detect reorder thresholds.
- Improved delivery lead times by 25% and increased on-time shipments by 13%, using data to drive operational decisions.

- Used VLOOKUP/XLOOKUP and IF statements to flag data inconsistencies across SKUs.

Administrator at TheFitnessCentre, India, Remote (April 2020 – Nov 2020)

- Implemented SEO keyword strategy through Google Trends and keyword planner tools to optimize content visibility.
- Built Google Analytics reports to monitor bounce rate, conversion rate, and engagement by campaign.
- Used Google Analytics and Instagram insights to refine content strategies, resulting in a 28% boost in organic traffic and 20% increase in engagement.
- Designed and tested landing pages using A/B variations for higher conversion rates.

EDUCATION

Master of Business Administration, Business Analytics (2023-2025)

Illinois Institute of Technology, GPA: 3.11

Key Courses: Data Visualization, Predictive Analytics, Operations and Process Management, Business Forecasting

Bachelor of Business Administration, Human Resource Management (2019-2022)

Amity University, GPA: 3.13

Key Courses: Business Statistics, HR Analytics, Research Methodology, Operations Management, Financial Management

CERTIFICATIONS

- Data Analyst Associate by DataCamp (2025)
- Google Data Analytics Professional Certification (2025)
- IBM Data Science Practitioner Certificate (2024)
- Digital Marketing Analytics Simulation (2024)

Visa Status: U.S Citizen
