EDUCATION

- Master of Science in Business Analytics**, University of New Haven, New Haven, CT Dec 2024
- *Relevant Coursework:* Machine Learning, Power BI, Database Design and Database Management, Data Mining for Business Intelligence, AI for Business.
- Bachelor of Technology in Computer Science**, SJB Institute of Technology, Bangalore, India Jul 2021

TECHNICAL SKILLS

- Programming Languages:** Python, R, SQL, Power Query, M.
- ETL & Scripting:** PostgreSQL, MySQL, SQL Server, SQLAlchemy, Data Modeling, DAX, Power Query.
- BI & Viz:** Power BI (advance) DAX, Star/Snowflake schemas, Drill-through, Bookmarks.
- Performance Optimization:** Indexing, Partitioning, Aggregations, Query Folding, Incremental Refresh Strategies.
- Cloud & Data Ops:** Azure Data Factory, Azure SQL, Snowflake (introductory) Git, CI/CD (basic), Agile Methodology.
- Data Validation:** ETL testing, Data Profiling, QA checks, Cross-source consistency validation.

WORK EXPERIENCE

- Data Engineer Intern**, 12-15 Molecular Diagnostics, Connecticut Jan 2024 – May 2024
- Designed **enterprise BI dashboards** with advanced DAX and semantic models, enabling stakeholders to track operational KPIs.
 - Wrote **Python** data-quality scripts to detect/correct anomalies; version-controlled with **Git/GitHub** (branching + PRs).
 - Built production **Power BI** dashboards and **semantic models** (star schema) for operations; standardized DAX measures/KPIs and improved report responsiveness via **incremental refresh** and optimized relationships.
 - Worked closely with stakeholders to translate data requirements into intuitive dashboards using DAX, drill-through, and slicer controls and conducted validation of source vs transformed data to ensure Power BI output aligned with business logic.
 - Migrated project codebase to **GitHub** and implemented branching strategy, pull request workflows, and access control to improve team collaboration and code quality.

- Business Intelligence (BI) Developer / Power BI Developer**, Hexaware Technologies, India Aug 2021 – Aug 2023
- Designed and developed **large-scale Power BI solutions** with DAX, M, and custom visuals to track key performance metrics and visualize trends across large datasets, delivering real-time insights for informed decision-making.
 - Wrote custom JavaScript code to extract required data from the front-end application, automated data ingestion into **Azure Blob storage**, and integrated the pipeline with Power BI to enable real-time reporting and visualization
 - Automated ingestion workflows and optimized datasets with incremental refresh and **query folding**, improving performance by 30%.
 - Built **end-to-end BI solutions** with Power BI (DAX, role-based security, time-intelligence) supporting strategic operations.
 - Utilized DAX calculations, custom visuals, and data modeling to build dynamic, visually compelling Power BI reports. Integrating data from multiple sources, configured **Power BI governance** for secure, role-based reporting access, **dynamic segmentation, time-intelligence, and drill-through** features for actionable insights.

- Full-stack Developer Intern**, DHS Informatics, India March 2020 - May 2020
- Developed a mini project on agricultural prediction and analysis using **Machine Learning**, Android, and Cloud technologies, leveraging **Firebase** for real-time data synchronization and push notifications.

PROJECTS

- F1 Telemetry ETL Pipeline** *R, PowerBI & Kafka* Jul 2025
- Built an end-to-end ETL pipeline to ingest live Formula 1 telemetry from the official API via Kafka, normalized and enrich data with Python, and loaded it into PostgreSQL. Designed a real-time Power BI dashboard for race analytics, including lap times, sector splits, and tire performance. Implemented indexing and schema optimization for fast querying.
- FDA Analysis** *R, PowerBI* Nov 2024
- Built an automated R pipeline that pulls the latest food enforcement data straight from the FDA's openFDA API, cleans and harmonizes the fields, and balances rare outcomes with **SMOTE**. I then one-hot encode the categorical fields, drop any low-information features, and train the model (**Elastic Net** via glmnet)—wrapped in live progress bars. The final model is serialized for easy deployment, and the whole script can rerun unattended to keep itself up to date with new FDA releases.
- Identification of Arecanuts** *Python, TensorFlow, U-Net, OpenCV, Flask* Aug 2021
- Deployed U-Net deep-learning models for agricultural image classification (92–96% accuracy). Used **Kafka** to stream images into TensorFlow for real-time inference and integrated the system into a Flask web app, demonstrating applied AI/ML with client-facing potential.
