

Anish Korada

Data Analyst

(248) 285-9869 | MI | devianishkorada@gmail.com | LinkedIn: <https://www.linkedin.com/in/anishkorada/>

Professional Summary

Data Analyst with over 4 years of experience in the insurance and IT sectors, specializing in data extraction, cleaning, and predictive modeling using SQL and Python. Proven track record in designing interactive dashboards and reports with Tableau, Power BI, and Excel to support risk assessment and investment analysis. Skilled collaborator adept in Agile and Waterfall methodologies, focused on transforming complex datasets into actionable business insights, process improvements, and automation.

Technical Skills

Data Extraction & Querying: SQL (Advanced Querying, Data Retrieval)

Data Cleaning & Preparation: Python (pandas, scikit-learn)

Data Analysis & Modeling: Exploratory Data Analysis (EDA), Predictive Modeling, Statistical Analysis

Data Visualization: Tableau, Power BI, Microsoft Excel (Pivot Tables, Reporting)

Reporting & Automation: Excel Automation, Dashboard Creation

Cloud Technologies: AWS (S3, Redshift, Lambda, EC2, RDS, QuickSight)

IDEs: Jupyter Notebook, VS Code

Project Methodologies: Agile, Waterfall, SDLC

Collaboration & Communication: Stakeholder Engagement, Requirements Gathering, Cross-functional Coordination

Domain Knowledge: Risk Assessment, Investment Analytics, Claims Management

Work Experience

AIG, USA | Data Analyst

Jun 2024 – Present

- Build and evaluate machine learning models (scikit-learn) to forecast risk scores and predict claim resolution times, enhancing underwriting accuracy and planning.
- Design and deploy interactive dashboards in AWS QuickSight and Tableau to visualize risk exposure, claim backlogs, and underwriting KPIs, improving strategic decision-making.
- Automate performance reporting in Excel with pivot tables and dynamic charts, reducing manual effort by 50% and speeding up report delivery to leadership.
- Extract and manage historical underwriting and claims data from relational databases using complex SQL queries and Amazon Redshift, building structured data pipelines for analysis.
- Clean and transform multi-source datasets in Python (pandas, NumPy) to produce model-ready datasets, addressing missing data and outliers.
- Conduct exploratory data analysis (EDA) using correlation matrices, visualizations, and descriptive statistics to identify key predictors of risk and claims delays.
- Collaborate with cross-functional teams under Agile and Waterfall frameworks to iteratively refine analytics solutions and ensure successful deployment.

Expieron Technologies, India | Data Analyst

Feb 2019 – July 2022

- Queried and extracted large-scale financial and claims datasets using SQL to support risk modeling and process optimization.
- Cleaned and prepared raw data in Python (pandas, scikit-learn) to enable accurate statistical analysis and predictive modeling.
- Automated Excel reports and data summaries using pivot tables and macros, reducing report turnaround time by 40%.
- Performed EDA and statistical testing to uncover investment trends, risk patterns, and operational bottlenecks.
- Developed predictive models in Python to forecast investment risks and claim processing times, improving decision-making and efficiency.
- Created interactive dashboards in Power BI to track portfolio performance, claim trends, and KPIs, enhancing stakeholder visibility.
- Collaborated with stakeholders in Agile and Waterfall environments to refine requirements, validate models, and deliver actionable insights.

Education

Masters in Information Systems

Central Michigan University, MI, USA

Aug 2022 - May 2024
