WORK EXPERIENCE

Software Engineer

Jun 2023 – Jul 2024

JP Morgan Chase & Co.

Hyderabad, India

- Collaborated with data engineers to develop Python ETLs to load data into SQL tables from multiple sources through REST APIs reducing manual data transformation efforts by 40%.
- Designed and implemented 20+ SQL views and tables used by machine learning models to provide predictions and data insights on the user dashboard for infrastructure provisioning.
- Migrated SQL components to accommodate schema evolution and database scaling. Contributed in moving data resources to the AWS cloud, which reduced the data retrieval time by 30%.
- Deployed multiple forecasting pipelines to production using CI/CD tools like Jenkins and Bitbucket, improving forecast accuracy by 10% through automating model training using Apache Airflow providing real-time hourly predictions for internal applications.

Software Engineering Intern

Feb 2023 – Jun 2023

JP Morgan Chase & Co.

Hyderabad, India

- Built time-series models using Facebook Prophet algorithm by performing EDA and parameter tuning to predict the volume peaks for 25 channels' datasets utilizing AWS S3, Sagemaker, and CloudFormation services to create an MLOps pipeline.
- Integrated AWS S3 Boto3 module with the existing code to plot a volume data graph and designed an API endpoint to upload it to a S3 bucket for volume peak analysis which increased model's performance by 20% through parameter optimization.
- Created Controller-Service-Data model in Spring Boot to transfer data between MS SQL database and AWS S3 which minimized the data transfer time between the application modules by 42%.
- Containerized a Python application using Docker and exported it as an AWS ECR image reducing the memory utilized by the application and enabling it to be coupled with other microservices.

EDUCATION

University of Colorado Denver, Denver, CO

May 2026

Master of Science in Computer Science | 4.0 GPA

Coursework: Artificial Intelligence, Natural Language Processing, Machine Learning, Data Science, Deep Learning, Algorithms

SRM University AP, Guntur, India

Jun 2023

Bachelor of Technology in Computer Science Engineering | 92.5%

Coursework: Data Structures, Operating Systems, Object-Oriented Programming, Databases, Software Engineering

TECHNICAL SKILLS

- **Programming Languages** – Python, C, C++, SQL, Linux, HTML, CSS, JavaScript
- **Frameworks** – Flask, REST API, Spring Boot, Git, JIRA, Confluence, BitBucket, Postman, Jenkins, Apache Airflow, Docker, Kubernetes, Power BI
- **Cloud Technologies** – AWS
- **Machine Learning** – PyTorch, TensorFlow, NumPy, Pandas, Scikit-learn, Matlab
- **Soft Skills** – Agile, Leadership, Critical Thinking, Team Management, Communication

CERTIFICATIONS

- AWS Certified Developer - Associate
- Applications of AI for Anomaly Detection, NVIDIA

PROJECTS

Contextual-based product description generation using Amazon's dataset | NLP & Gen AI

[GitHub](#)

- Built an LLM that utilizes the users' product reviews as context to generate a coherent new product description based on their sentiment scores using NLP and Gen AI techniques like BERT, RNN, LSTM, and T5 models.

Age Prediction | Tensorflow, CNN

[GitHub](#)

- Trained a Tensorflow model with convolutional and max pooling layers to pre-process human face images and predict their age with a mean average error value of 10.19 while minimizing the loss metric.

Tourism Recommendation System | Data Science

[GitHub](#)

- Created a content-based recommendation system that uses the Geoapify Location API, Pandas, Tkinter, and folium modules to extract user's location and suggest places based on their preferences with 85% accuracy.

Human pose estimation and prediction | Deep Learning

- Predicted human yoga poses in yoga-82 dataset using CNN and LSTM based approaches with OpenPose and MediaPipe frameworks to detect poses using deep learning.
