SUMMARY

Data Analyst with 3+ years of experience delivering data-driven solutions across healthcare and IT domains at UnitedHealth Group and Hexaware Technologies. Skilled in SQL, Python, R, and advanced analytics frameworks (Scikit-learn, dbt, Spark) with expertise in designing Snowflake/Redshift data models, scalable ETL pipelines (Airflow, Fivetran, AWS Glue), and implementing robust data quality automation. Proficient in building interactive BI dashboards using Power BI, Tableau, and Excel to provide actionable insights that improved decision-making and reduced operational inefficiencies. Adept at applying statistical analysis, predictive modeling, and hypothesis testing to solve real-world business problems. Strong collaborator with experience working in Agile/Scrum teams, engaging stakeholders, and leading cross-functional projects to enhance reporting, compliance, and healthcare outcomes.

TECHNICAL SKILLS

Languages:	Python (Pandas, NumPy, SciPy), SQL, R
Frameworks & Libraries:	Scikit-learn, TensorFlow/Keras, PyTorch, Spark, dbt, Matplotlib, Seaborn, Plotly
Database:	PostgreSQL, SQL Server, Snowflake, AWS Redshift, MySQL
Visualization Tools:	Tableau, Power BI, Excel (Advanced: Pivot Tables, Power Query), Looker, KPI Dashboards, Data Storytelling
Tools:	Apache Airflow, Fivetran, JIRA, Confluence, Git/GitHub, Statistical Analysis Tools, A/B Testing, Hypothesis Testing
Data Warehousing:	AWS (Redshift, S3, Lambda), ETL Workflows, Data Pipelines, Data Integration, Dimensional Modeling (Star/Snowflake Schema), Data Quality Automation
Project Management & Collaboration:	Agile/Scrum, JIRA, Confluence, Trello, MS Teams, Slack, Cross-functional Stakeholder Communication, UAT Leadership

EXPERIENCE

DATA ANALYST | UnitedHealth Group, DL

Jun 2025 – Present

- Defined engagement KPIs (missed appointments, care gap closure, wellness visit adherence) by collaborating with provider networks and care coordinators; authored KPI dictionary and mapped EHR + scheduling system sources.
- Designed a Snowflake data model with staging and reporting layers; created dbt transformations to standardize provider schedules, patient records, and care gap data, improving reporting consistency.
- Implemented scalable pipelines using AWS Glue and Python (Pandas, Boto3) for cleansing and integrating scheduling + EHR feeds, cutting manual reconciliation effort by 40%.
- Analyzed utilization trends with Python (Matplotlib, Scikit-learn) to identify high no-show populations and predict appointment adherence probability, improving targeted outreach campaigns.
- Delivered executive dashboards in Power BI with drill-through to provider- and member-level insights, enabling regional managers to reduce no-show rates by 15% within 6 months.

DATA ANALYST INTERN | UnitedHealth Group, DL

Feb 2025 – May 2025

- Collected & Documented requirements from pharmacy operations teams, defining metrics such as medication possession ratio (MPR), proportion of days covered (PDC), and refill compliance.
- Extracted & Prepared datasets using SQL from OptumRx pharmacy claims; transformed raw data with Excel Power Query for quick prototyping and validation.
- Built an interactive Tableau dashboard visualizing refill compliance trends by drug class, region, and member demographics, providing actionable insights for care managers.
- Presented findings that identified a 12% lower adherence among diabetic patients, informing targeted interventions for high-risk cohorts.

DATA ANALYST | Hexaware Technologies, India

May 2021 – Jul 2023

- Defined key performance indicators (AHT, SLA breach rate, and backlog) by collaborating with business stakeholders and documenting a metrics dictionary, ensuring consistent reporting across IT and BPS operations.
- Designed and optimized a Snowflake star schema with SQL and dbt transformations, embedding automated data quality tests that improved report accuracy and reduced query execution time by 30%.
- Developed scalable ELT pipelines using Fivetran for data ingestion and Airflow for orchestration, with Python-based validations to maintain near real-time data availability.
- Conducted advanced data analysis in SQL and Python (Pandas, SciPy) to identify operational bottlenecks, enabling staffing recommendations that lowered SLA breaches by 20%.
- Delivered self-service Power BI dashboards with interactive drill-downs and DAX measures, reducing manual reporting effort by 70% and accelerating decision-making for operations leaders.
- Implemented version control and CI/CD practices in GitHub for dbt models and Airflow DAGs, reducing deployment errors and ensuring faster rollouts of pipeline enhancements.
- Collaborated with cross-functional teams in agile sprints, providing sprint-level reporting and ad-hoc insights that improved stakeholder alignment and accelerated delivery timelines by 15%.

EDUCATION

Masters in Information system technologies Assurance Wilmington University, DL	May 2025
Bachelor in Electronics and communication engineering Koneru Lakshmaiah University, INDIA	May 2023
