

Summary

Anji Reddy Seelam Clinical Data Analyst

anjireddy@careeremail.net | 978-764-3918 | USA | [LinkedIn](#)

Experienced Clinical Data Analyst with 2+ years of strong background in analyzing complex healthcare datasets to drive meaningful insights for informed decision-making and enhance the quality of care for vulnerable populations, including seniors with chronic conditions. Skilled in data cleaning, statistical analysis, and data visualization using tools such as Python, SQL, Excel, Power BI, and Tableau. Adept at collaborating with cross-functional teams including Business Development, Operations, and Clinical teams to deliver actionable insights and support evidence-based decisions. Experienced in working with data warehouses, ETL processes, and partnering with engineering teams to ensure streamlined data flow and committed to ensuring data integrity, regulatory compliance, and continuous process improvement to enhance operational efficiency in digital healthcare environments.

Professional Experience

Clinical Data Analyst, Franciscan Health 09/2024 – Present | Remote, USA

Collaborated with cross-functional teams (Business Development, Operations, Clinical) using Agile methodology to gather data requirements, improving cross-team collaboration by 60% and reducing misalignment by 45%.

Partnered with Engineering teams to build data pipelines from EHR systems, cleaned and standardized data using Python and Excel, resolving 98% of data quality issues and improving dataset readiness by 70%.

Developed Power BI dashboards with DAX to provide real-time insights on treatment outcomes, enhancing decision-making speed by 40% and improving clinician access to insights by 55%.

Performed comprehensive data analysis using Python (pandas, numpy) and Excel, identifying 35% variation in recovery rates and increasing clinical understanding of patient response differences by 50%.

Worked with

the

Director of Analytics to define KPIs and conducted statistical analysis (t-tests, chi-square tests) to validate treatment efficacy, improving evidence-based protocol usage by 22%.

Delivered data-driven insights through reporting to clinical and administrative teams, increasing protocol adherence by 30%, improving patient recovery outcomes by 18%, and reducing ineffective treatment use by 25%.

Assistant Clinical Data Analyst, Speare Memorial Hospital 01/2023 – 08/2024 | Plymouth, New Hampshire, USA

Executed data warehouse solutions and cleaned patient data using Excel Power Query and Python (pandas), improving data accuracy by 20% through error detection and standardization.

Applied advanced cohort analysis and segmentation techniques using Python (pandas, NumPy) to segment patients by age, comorbidities, and treatment adherence for identifying optimal health outcomes.

Created interactive Tableau dashboards to track population health metrics (HbA1c, blood pressure, readmission rates), achieving a 10% reduction in readmission rates by targeting high-risk cohorts.

Conducted survival analysis on time-to-event data to identify readmission predictors, improving early intervention strategies by 15% and supporting Value-Based Care initiatives.

Collaborated with cross-functional teams (Quality Improvement, Nursing, Primary Care) to validate analysis findings and implement strategies, resulting in a 12% reduction in preventable hospitalizations.

Compiled comprehensive outcome analysis reports and presented findings to Clinical Governance Committee, recommending protocol changes to improve patient outcomes by 18%.

Education

Master of Science in Health Informatics 09/2022 – 05/2023

New England College New Hampshire, USA
