

ANKIT DODDI

+14702724120 | ankitdoddi@gmail.com | [Linked In](#)

Software Engineer with over 4 years of experience in embedded systems, test automation, and Java application development. Proven track record in SOAP & REST services and servers, implementing performance optimizations, and resolving complex defects. Expertise in vehicle interface processors and communication. Experienced in developing user-friendly tools to enhance system reliability.

SKILLS

- Core Java, Python, Embedded C
- REST Server/Services, SOAP Webservices
- Spring Boot
- AWS Cloud Practitioner (CLF-C02)
- React, HTML, CSS
- Hibernate, MySQL, Postgres, Mongo DB
- Kafka, Docker
- JUnit, Robot Framework
- Git, Jira, Bitbucket
- XML, XSD, DTD
- Jenkins CI/CD pipelines
- CAN Protocols, AUTOSAR, Trosos

PROFESSIONAL EXPERIENCE

CLIENT: PANASONIC AUTOMOTIVE
SOFTWARE ENGINEER

Peachtree City, GA, USA
June 2023 - Present

PROJECT: WAYMO – ADVANCED ENGINEERING

- Translated MATLAB code to C for vehicle power-moding to optimize performance and integration with embedded systems.
- Utilized AUTOSAR for creating runnables and configuring parameters, ensuring efficient power management across vehicle components.
- Employed tools like Trosos for accurate configuration of software components within the power-moding system.
- Resolved defects related to power-moding in displays, speakers, and other vehicle components, improving system reliability and user experience.
- Enhanced overall power-moding functionality to prevent excessive power consumption and ensure seamless transitions between vehicle states.

PROJECT: TEST AUTOMATION

- Developed a user-friendly CAN CLI for seamless transmission of CAN messages to the Head Unit.
- Created features for sending single, multiple, and periodic CAN messages using Python's CAN and click frameworks.
- Integrated Jenkins and Rational Quality Manager (RQM) for streamlined tracking and reporting of robot test cases.
- Enabled linkage of robot script-based test suites/cases to RQM, allowing data transfer from Jenkins via HTTP for better visibility of test results.
- Developed a booking system for a farm portal that enables multiple users to access nodes based on availability, preventing overlapping bookings and minimizing user disruptions.

SIEMENS EDA
SENIOR SOFTWARE ENGINEER

Hyderabad, Telangana, India
July 2021 - June 2023

- Converted the existing SOAP web services of the product "Capital" to REST services to meet future customer demands.
- Created REST endpoints to handle various inputs, with an equivalent output to existing SOAP web services.
- Developed a REST Client for invoking REST services, assisting QA in testing various data sets and parameters.
- Implemented caching in the REST server, reducing average response time by 80% by holding frequently accessed data in memory.
- Developed a runtime failure handler for REST servers by monitoring the server's live status and adjusting load balancer requests.
- Migrated technical documents to AsciiDoc, saving development time by minimizing merge conflicts during document updates.
- Contributed to data exchange between MCAD and ECAD applications in formats like Wiring, Harness, and PLM XML.

- Reduced defects in the web server, web services, mail server, and internal application data exchange, earning an award for defect reduction.
- Collaborated in a Scrum-driven environment on the development of Epics/Stories with global teams from the UK and the US.
- Overhauled a REST and SOAP Client, improving performance, functionality, and code readability.

SIEMENS EDA**SOFTWARE ENGINEERING INTERN****Hyderabad, Telangana, India***August 2020 - June 2021*

- Assisted in the initial design and development of REST API endpoints for streamlined data processing.
- Contributed to the debugging and maintenance of SOAP and REST services.
- Gained hands-on experience in documentation and migration processes for legacy systems.
- Worked on internal projects focused on optimizing data exchange between CAD applications.
- Developed skills in version control, technical documentation, and collaboration within cross-functional teams.

EDUCATION**CMR College of Engineering and Technology***Bachelor's, Electronics and Communication Engineering***August 2017 - June 2021***GPA: 9.29*
