

ANKIT MAHTO

Full Stack Developer (Software Engineer)

ankitmah934@gmail.com | +1-405-223-2083 | Oklahoma, OK

www.linkedin.com/in/ankit-mahto13 | <https://github.com/codets1989>

PROFESSIONAL SUMMARY

Versatile and results-driven Full Stack Software Developer with hands-on experience in building scalable web applications using MERN stack, Python, and Java. Demonstrated proficiency in developing end-to-end solutions, integrating RESTful APIs, and implementing microservices architecture in both cloud and on-prem environments. Proven ability to leverage modern technologies such as React, Spring Boot, Docker, Kubernetes, and ELK stack to solve business problems across banking and consulting domains. Adept in collaborating with cross-functional teams using Agile and SDLC methodologies, contributing to design documentation, code quality, and end-to-end delivery lifecycle.

PROFESSIONAL EXPERIENCE

Wells Fargo | Minneapolis, MN

Aug '24 – Present

Full Stack Developer

- Developed and deployed a RESTful API (Java/Spring Boot) for Employee-Customer Matching (ECM), integrating third-party API Gee to verify customers via SSN (last digits), phone number, and card details.
- Optimized SQL queries to join 4+ critical tables (HVC, product flag code, segment category) for accurate customer eligibility checks.
- Followed CI/CD pipelines (Harness) for deployments, testing changes in feature branches (Dev) before QA approval and production release.
- Containerized applications using Docker and orchestrated deployments using Kubernetes across dev, staging, and production environments.
- Integrated Ag-grid in React components to support large-scale data table rendering with sorting, filtering, and virtualization.
- Developed Kafka-based streaming services to process high-throughput banking transactions and system events in realtime.
- Implemented OAuth2-based authentication and role-based authorization to secure customer data and API endpoints.
- Documented detailed test cases in Jira (including steps, expected results, and edge cases) to ensure comprehensive API and UI testing, improving QA team efficiency by 30%.
- Enhanced observability by implementing Splunk logging for real-time error tracking, API latency monitoring, and audit trails, reducing troubleshooting time by 30%.
- Managed and supported legacy systems while transitioning services into microservices using a domain-driven design approach.
- Addressed performance bottlenecks and implemented caching strategies using Redis, reducing API response times by 40%.
- Migrated key frontend components from JavaScript to TypeScript in React applications, enhancing code quality, type safety, and reducing runtime errors during development and production.

Technology Used: React.js, Java Spring Boot, PostgreSQL, Docker, Kubernetes, Redis, Jenkins, GitHubActions, ELK, TypeScript

TCS | Chennai, India

Jul '22 – Jul '23

Software Developer

- Developed enterprise applications for clients in finance and retail using the MERN stack and Java backend systems.
- Refactored backend architecture using Node.js and Express.js to reduce latency and improve scalability • Built microservices in Java Spring Boot and integrated them with frontend portals via REST and GraphQL APIs.
- Managed MongoDB and MySQL databases, ensuring data integrity, replication, and indexing for performance.
- Integrated Kafka streams for asynchronous message processing between backend services and external APIs.
- Worked on building internal tooling dashboards using React, Redux, and D3.js for enhanced visualization.
- Implemented data validation and error handling across services using middleware patterns and custom exception classes.
- Automated builds and deployments using Jenkins, SonarQube for code quality, and Docker for containerization.
- Built geospatial data visualizations using **MapboxGL** for tracking logistics and delivery routes in a retail client application.
- Participated in SDLC-aligned architectural reviews and documentation efforts, supporting traceability from requirements to deployment

- Conducted performance testing using Apache JMeter and load testing of critical services during UAT.
- Supported integration of third-party libraries and APIs for payments, logistics, and analytics.
- Worked closely with business analysts and product owners to gather requirements and convert them into technical stories.
- Actively contributed to Agile ceremonies including sprint planning, retrospectives, and daily standups.
- Mentored junior developers on Git branching strategies, code standards, and RESTful service best practices.

Technology Used: Python (scikit-learn, XGBoost, pandas, NumPy), PySpark, SQL, Hive, Databricks, AWS (S3, EMR), Power BI, REST APIs, Git, Jira, Agile, SR 11-7 Model Governance

Mangosoft Solution | Kathmandu, NP

Feb '20 – Jun '22

Jr. Software Developer

- Assisted in developing web applications using Java, Python Flask, and React in cross-platform projects.
- Created REST APIs in Flask and integrated with frontend applications, supporting data exchange in JSON format.
- Designed responsive web components using React and Bootstrap for custom client dashboards.
- Collaborated with senior developers to build Python-based automation scripts for data ingestion and cleanup.
- Containerized development environments with Docker and used Git for source control and collaboration.
- Supported backend logic for scheduling systems and CRUD operations in MySQL and MongoDB databases.
- Developed test scripts using Python unittest and Postman collections for API validation.
- Participated in daily standups and sprint reviews, tracking progress using Jira.
- Engineered CI/CD pipelines using Jenkins and GitHub Actions for automated testing, builds, and deployments to AWS EC2 instances.
- Contributed to optimizing SQL queries and indexes, improving report generation time by 35%.
- Created static and dynamic reports using HTML, CSS, and JavaScript for internal and client use.
- Helped transition legacy code to modular architecture by rewriting components in Python and React.
- Performed log analysis using Elasticsearch and Kibana to trace issues and performance metrics.
- Documented RESTful APIs and project workflows using Confluence and OpenAPI specs.

Technology Used: Java, Python, Flask, React, MongoDB, MySQL, Docker, Git, Elasticsearch, Jira, Bootstrap, OpenAPI

EDUCATION

Oklahoma City University | MS in Data Science | Oklahoma City, Oklahoma Vellore Institute of Technology | Btech in Computer Science and Engineering | Vellore, India

OTHER PROJECTS:

Personalized Writing Coach | [GitHub](#)

- Built a grammar correction tool using fine-tuned T5 models and a scalable Python FastAPI backend with Spring Boot orchestration.
- Designed an interactive React frontend with real-time grammar correction powered by asynchronous WebClient requests.

Online Course Registration System | [GitHub](#)

- Developed a learning portal using MERN stack with multilingual support, a course chatbot, and dynamic search capabilities.

Tax Revenue Forecasting – Oklahoma Cities | [GitHub](#)

- Performed SQL-based tax data analysis and built forecasting models with Python (XGBoost, Pandas) for multiple cities.

CERTIFICATIONS

- AWS Certified Developer – Associate (in progress)
- TensorFlow Developer Certificate
- MongoDB for Developers – MongoDB University
- Responsive Web Design – Free Code Camp
