

Ankit Nayak

DATA ANALYST

Mobile : 5513101921 | **Email :** nayakankit9629@gmail.com | **Location :** Massachusetts, USA

SUMMARY

Data Analyst with 3+ years of hands-on experience in analyzing complex datasets, developing insights, and driving data-driven decision-making in the Healthcare and supply chain industry. Proficient in Python, SQL, and R programming languages, with expertise in utilizing packages such as NumPy, Pandas, matplotlib, and SciPy for data manipulation, analysis, and visualization. Proficient in using Tableau, Power BI, and Advanced Excel for creating interactive dashboards and visualizations, facilitating data-driven decision-making and enhancing overall efficiency. Experienced in automating ETL pipelines using SSIS and Python, streamlining data workflows and improving data ingestion.

EDUCATION

Clark University, Worcester, MA, USA

January 2023 – December 2024

Master of Science in Data Analytics

St. Francis Institute of Technology, India

August 2018 – April 2022

Bachelor of Technology in Electronics and Telecommunication Engineering

CERTIFICATION

- PyCode : Python Programming from St. Francis Institute of Technology.
- Pandas Essential Training from Clark University.
- Microsoft Dynamics 365 Training from proMX.

TECH - SKILLS

Methodologies:	Agile (Scrum, Kanban), Waterfall
Languages:	Python, SQL
Packages:	NumPy, Pandas, Matplotlib, SciPy, TensorFlow, Seaborn, Scikit-learn
Data Visualization Tools:	Tableau, Power BI, Advanced Excel, Statistics
Database:	MySQL, MongoDB, PostgreSQL, SQL Server
IDEs:	Visual Studio Code, PyCharm, Jupyter Notebook
Other Technical Skills:	Amazon Web Services (AWS), ETL, SSIS, SSRS, EDA, Machine Learning Algorithms, Probability distributions, Confidence Intervals, ANOVA, Hypothesis Testing, Regression Analysis, Linear Algebra, Advance Analytics, Data Mining, Data Visualization, Data warehousing, Data transformation, Data Storytelling, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Jira, Git, GitHub, SVN
Operating System:	Windows, Linux, Mac OS

PROJECT

Live Investment Monitoring Dashboard

- Developed a real-time stock market dashboard using Python, Power BI, and MySQL, providing up-to-date insights through automated data retrieval from financial APIs.
- Managed SQL databases in MySQL to ensure efficient data processing and reliable access.
- Visualized key trends and metrics with Power BI, enabling swift, data-driven decision-making.

SQL Crafter

- SQLCraftER is a comprehensive database project focused on creating a robust logical ERD (Entity-Relationship Diagram) based on structural business rules and a conceptual ERD.
- The project involves the implementation of SQL for 5 Aspect, which includes defining tables and constraints, creating reusable stored procedures, providing example usages of the procedures, and developing queries.

Cinema Review Analyzer

- Designed and developed a Tableau dashboard using a movie review dataset.
- Focused on cleaning, transforming, and visualizing the data to build a single-page dashboard that allows users to easily explore and analyze movie ratings, reviews, and trends.
- Utilized advanced Tableau features to make the dashboard intuitive and user-friendly, ensuring it provides clear, actionable insights.

EXPERIENCE

Blue Cross Blue Shield of Massachusetts, MA

Aug 2024 – Present

Data Analyst

- Led **data integration and analysis of 500,000+ member records** to assess preventive care adherence by querying claims, encounters, and eligibility data from structured **SQL databases** across multiple source systems (EDW, claims warehouse).
- Developed and deployed **Power BI dashboards** to visualize gaps in screenings like mammograms and colonoscopies across member cohorts segmented by age, risk category, provider group, and region—used by leadership to guide population health strategies.
- Built a supervised classification model in **Python (scikit-learn)** to predict likelihood of members missing recommended screenings, using historical claim behavior, prior utilization, chronic conditions, socioeconomic status, and care access.
- Performed extensive **feature engineering and model tuning**, incorporating over 20 variables: improved prediction accuracy and model AUC to ~0.83 through cross-validation and hyperparameter optimization techniques (GridSearchCV).
- Discovered that **27% of members aged 50–64** were overdue for at least one recommended screening, and linked gaps to elevated churn and cost risk.
- Conducted **churn risk analysis**, revealing that members missing ≥ 2 screenings had a 2.5x higher disenrollment rate within 12 months—findings that influenced executive-level retention policy.
- Utilized **AWS Glue** to orchestrate ETL workflows across disparate data sources (EDW, claims warehouse, eligibility systems), enabling scalable and serverless data integration of over 500,000+ member records.
- Supported **NCQA HEDIS compliance initiatives** by automating screening gap identification and reporting, contributing to improved quality ratings.

Infosys, India

Sept 2020 – Dec 2022

Data Analyst

- Created **interactive Tableau dashboards** to visualize supply chain KPIs such as inventory turnover, demand variability, stockout rates, and supplier performance, enabling executives to optimize procurement and logistics strategies.
- Employed **data-driven insights** to identify key factors contributing to delays and excess inventory, such as vendor lead times, demand forecasting accuracy, and replenishment cycles, leading to a **12% improvement in forecasting accuracy**.
- Designed and implemented **ETL pipelines** to extract, cleanse, and consolidate data from multiple sources, including ERP systems (SAP), WMS, vendor APIs, and internal procurement databases.
- Applied **K-Means clustering for vendor segmentation**, identifying four key supplier personas based on delivery reliability, cost variance, lead time stability, and product category.
- Stored **raw and transformed supply chain data in Amazon S3** with structured partitioning, versioning, and lifecycle policies to optimize cost, performance, and ensure data compliance for procurement audits.
- Leveraged **Apache Spark** for distributed processing of large-scale inventory and shipment datasets (500,000+ records), reducing ETL processing time by **5% compared to traditional SQL-based workflows**.
- Executed a **comprehensive analysis of 500,000+ SKU-location combinations** using SQL and Python (Pandas, NumPy) to identify slow movers, overstock risks, and optimize reorder points.
- Conducted **A/B testing** on inventory planning models to evaluate reorder algorithms, resulting in a **10% improvement in fill rate** and a **7% reduction in carrying costs** with the experimental model.
- Automated **supply chain reporting workflows using Excel VBA**, saving 20+ hours per week in manual data processing for demand planners.
