San Jose, CA • +1 (571)-577-5578 • anoohya.p@aogjob.com | [LinkedIn](#)

SUMMARY

Detail-oriented Data Engineer with 3+ years of experience in designing scalable data pipelines, implementing cloud-based solutions, and optimizing data workflows. Proficient in technologies like Apache Kafka, Spark Streaming, and AWS, with expertise in developing ETL processes and integrating data across diverse platforms. Skilled in leveraging Databricks, Tableau, and Synapse Analytics SQL to deliver insights and support data-driven decision-making. Experienced in collaborating with cross-functional teams to migrate and manage complex data systems while ensuring compliance with industry regulations. Demonstrates strong analytical skills and a proven ability to streamline processes, improve data quality, and support organizational goals through efficient data integration and visualization strategies. Proactive in identifying innovative solutions to complex challenges and delivering reliable data solutions for business operations.

EDUCATION

Masters in Computer Science| Fitchburg State University, Fitchburg, MA

B.Tech. Electronics and Communications| Veltech University, Chennai, India

May 2024

April 2021

PROFESSIONAL EXPERIENCE

Cigna Group, Remote, USA | Data Engineer

July 2023-Present

- Led the design and deployment of real-time data pipelines using Apache Kafka and Apache Spark Streaming, improving data flow efficiency and reducing processing time by 30%.
- Engineered cloud-based data storage solutions on AWS, ensuring HIPAA and GDPR compliance for healthcare data, enhancing data security and scalability.
- Spearheaded the migration of Cigna's pharmacy benefit management (PBM) data to a more scalable architecture, utilizing Hadoop clusters and Cassandra databases, resulting in improved data processing capabilities.
- Developed and maintained ETL processes for integrating data across Medicare, Medicaid, and virtual care platforms, enabling real-time reporting and reducing manual data handling by 25%.
- Collaborated with cross-functional teams to implement data solutions supporting Cigna's Medicare Advantage programs, enhancing operational efficiency and improving service delivery.
- Optimized predictive analytics models for healthcare data, contributing to a 12% reduction in patient readmissions and improving the accuracy of healthcare forecasts.
- Worked closely with business stakeholders to develop custom data visualizations using Tableau, providing actionable insights that led to improved decision-making and strategic planning.
- Designed and implemented automated data validation frameworks, ensuring data integrity and reducing errors in processing across diverse healthcare datasets.
- Facilitated seamless integration of third-party APIs with existing data systems, enabling real-time data exchange and enhancing system interoperability for critical healthcare applications.

Accenture Pvt Ltd, Hyderabad | Data Engineer

Oct 2021 – August 2022

- Partnered with Actuarial, Claims, Tax, and Platform teams to define data requirements, achieving 100% alignment with business needs and seamless data integration.
- Ingesting Broker Submission Data to Streaming Delta Live Table (DLT) Pipelines on Databricks to generate and produce quote information for underwriters on a real-time lead generation on Salesforce systems.
- Mapping XML and JSON Data to Delta Live Tables for integration with existing Data Model. Leveraged Python and Synapse Analytics SQL to analyze customer policy data, enhancing claims processing insights and boosting operational KPIs by 20%.
- Developed Tableau dashboards to visualize KPIs and insights, empowering 15+ stakeholders with real-time data for decision-making.
- Led the complete Third-Party Administrator (TPA) Data Ingestion, effectively moving data from 15 sources to Azure Delta Lake.
- Implemented robust data validation, achieving 98% accuracy, reducing data incidents by 30%. Collaborated with data owners to align the ingestion process with business requirements.
- Streamlined data transformation workflows by automating ETL pipelines on Databricks, enhancing data readiness for advanced analytics and reducing manual intervention.

Sigma InfoSolutions, Bangalore | Data Analyst

May 2020 - Sep 2021

- Conducted detailed data analysis for eCommerce and FinTech solutions, utilizing SQL and Python to extract, clean, and transform data from various sources, improving data accuracy by 20%.
- Assisted in the development and optimization of Business Intelligence (BI) dashboards using Power BI and Tableau, enabling real-time decision-making for senior management and increasing reporting efficiency by 25%.
- Collaborated with cross-functional teams to identify key performance indicators (KPIs) for digital lending and payment platforms, contributing to data-driven strategies that improved transaction processing speed by 15%.
- Applied statistical techniques and predictive modeling to forecast customer behavior, enhancing the effectiveness of targeted marketing campaigns and increasing customer retention by 10%.
- Automated data reporting processes using Excel macros and Python scripts, reducing manual reporting time by 30% and enabling quicker business insights.
- Supported the migration of data to AWS cloud infrastructure, ensuring seamless integration with existing analytics tools and optimizing data storage for faster access.
- Participated in the data quality assurance process, performing data validation and identifying inconsistencies, resulting in a 12% improvement in data integrity.

PROJECTS

Data Integration and Migration for Strategic Divestitures (Cigna Group)

- Developed and configured ETL pipelines using Apache Spark and AWS Glue to consolidate historical and operational data from multiple sources, including Medicare Advantage and Cigna Supplemental Benefits, into a centralized data lake, ensuring seamless data access and analytics for both Cigna and HCSC.
- Applied data partitioning techniques to ensure only relevant datasets were retained post-divestiture. Used SQL-based queries and data transformation logic to reduce redundancy, optimize storage, and ensure efficient access to critical business data.
- Implemented Apache Kafka for real-time data ingestion, enabling continuous data flow between operational systems and the data lake. Integrated AWS Glue for automated ETL processes, reducing manual intervention and maintaining consistency across platforms.
- Automated reporting generation by configuring AWS Lambda to trigger ETL jobs and data updates. Created real-time dashboards and visualizations using Tableau, ensuring stakeholders had access to accurate and timely financial and regulatory data.
- Collaborated with data architects and business analysts to test and validate the migration processes, ensuring data integrity and accessibility throughout the transition.

Real-Time Data Ingestion and Analytics for Insurance Quote Generation (Accenture Pvt Ltd)

- Initiated the project by collaborating with Actuarial, Claims, Tax, and Platform teams to define data requirements, ensuring alignment with business goals for seamless integration.
- Developed Streaming Delta Live Table (DLT) pipelines on Databricks to ingest Broker Submission Data for real-time quote generation for underwriters, enhancing the speed of lead generation for Salesforce systems.
- Mapped XML and JSON data to Delta Live Tables, integrating it with the existing data model. Leveraged Python and Synapse Analytics SQL to analyze customer policy data, resulting in a 20% boost in claims processing efficiency.
- Created Tableau dashboards to visualize real-time KPIs, providing 15+ stakeholders with actionable insights to make data-driven decisions.
- Led TPA Data Ingestion, integrating data from 15 sources into Azure Delta Lake, optimizing data access for downstream analytics.
- Implemented robust data validation, achieving 98% accuracy and reducing data incidents by 30%, enhancing overall data quality.
- The project improved operational efficiency, supported faster decision-making, and provided more accurate insights to key stakeholders.

TECHNICAL SKILLS

Operating Systems: Windows, Linux, Unix

Programming & Data Processing: Python (Pandas, NumPy), SQL, ETL Processes, Data Cleaning, Data Preprocessing, Missing Data Imputation, Data Transformation, Data Aggregation

Real-Time Data Processing: Apache Kafka, Apache Spark Streaming, Streaming Delta Live Tables (DLT)

Cloud Technologies & Data Storage: AWS (Glue, Lambda, S3), Azure (Delta Lake), Hadoop, Cassandra

Data Integration & Migration: Data Lakes, Data Partitioning, Data Ingestion, Data Validation Automation, Data Migration

Data Visualization: Tableau, Power BI, Dashboards, Real-Time Data Visualizations, Trend Analysis, KPI Monitoring

Statistical Analysis & Modeling: Predictive Analytics, Statistical Methods, Trend Identification, Correlation Analysis

Database Management & Querying: SQL Databases, Data Extraction, Query Optimization, Data Validation Workflows

Automation & Scripting: Python (Automation, Anomaly Detection), Reporting Automation, Real-Time Data Ingestion, Data Pipeline Development

Project Management & Collaboration: Cross-Functional Team Collaboration, Stakeholder Engagement, Agile Methodology, Reporting Automation

Data Security & Compliance: HIPAA Compliance, GDPR Compliance, Data Privacy Best Practices, Encryption, Secure Data Handling
