

Anubhav Dogra

Albany, NY 12203 • +1 838-202-8651 • anubhavdogra7@gmail.com

EDUCATION

University at Albany, State University of New York

Master of Science, Business Analytics

December 2024

Recipient of Dean Merit Award 2023-2024

Related Coursework: Business Analytics and Data Mining; Forecasting and Panel Data Analysis; Business Analytics and Text Mining; Databases and Business Intelligence; Analytics and Visualization; Analytics for Strategic Marketing

Chhattisgarh Swami Vivekanand Technical University, India

Bachelor of Technology, Electronics and Telecommunication Engineering

January 2021

TECHNICAL SKILLS

Python, Machine Learning, Data Analytics, SQL, ERD, Tableau, Power BI, Excel, AWS, Azure, GCP

RELEVANT EXPERIENCE

Software Developer (Volunteer), Translation Commons, CA (Remote) April 2025 - Present

- Analyzed and transformed data using MySQL (joins, aggregates, subqueries, CTEs), reducing query turnaround time by **~30%**, and automated workflows with Excel VBA macros, cutting manual effort by **~40%**.
- Developed Tableau dashboards and visualizations (line charts, bar charts, choropleth maps), improving stakeholder insight and data-driven decision-making efficiency by **~25%**.
- Collaborated with stakeholders to gather requirements, define KPIs, and deliver analytics solutions.

PROJECT EXPERIENCE

Tableau Visualization & Analytics Project | [Tableau Business Intelligence Analyst Professional](#)

- Built a full suite of visualizations, dashboards, and stories using fictional E-commerce and Superstore datasets, including funnel charts, advanced geospatial maps, dual-axis charts, motion charts, and interactive dashboards to analyze sales, profit, and regional performance.
[GitHub Link](#) | [Tableau Public Visualizations Link](#)

Student Performance Predictor | Python, Scikit-Learn, NumPy, Pandas, Matplotlib, Seaborn

- Built end-to-end machine learning models (Linear Regression, K-Nearest Neighbors, Random Forest) to predict students' final grades using the UCI Student Performance dataset; achieved up to **~82%** accuracy.

- Performed data preprocessing, feature selection, hyperparameter tuning, and model comparison; saved optimal models using pickle and visualized feature relationships.

Super Store Exploratory Data Analysis | Python, Pandas, Seaborn

- Performed end-to-end data cleaning and exploratory analysis on **9,900+** retail transactions to identify best-selling categories, high-profit segments, and regional sales performance.
- Analyzed customer segments, shipping preferences, and sub-category profitability to uncover strategic business opportunities.
- Delivered actionable insights and recommendations to improve product mix, pricing strategy, and regional marketing efforts.

NYC Public School SAT Performance Analysis | Python, Pandas

- Analyzed NYC public school SAT data to identify schools with top math performance, borough-level variations, and the city's top 10 overall schools.
- Computed school ranking metrics, total SAT scores, and borough-level statistics using Pandas grouping, aggregation, and sorting techniques.
- Identified the borough with the largest performance variation using standard deviation analysis.

Business Analysis Project – Bringing Scrappy Compost to the Web

- Analyzed a fictional company dataset to produce a Business Requirements Document (BRD).
- Defined the business problem, project goals, success criteria, constraints, and stakeholder analysis using a Power/Interest Grid.
- Developed functional requirements, including process flow diagrams and a domain model.
- Applied business analysis techniques such as requirements elicitation, gap analysis, and workflow modeling. [GitHub Link](#)

Impact of External Interventions on Governance Outcomes | Python, Pandas, Seaborn, Matplotlib, Statsmodels

- Built and analyzed a 30-country (2006–2022) panel dataset from **7.5GB** of Fragile States Index and World Bank indicators; generated statistical summaries and visualizations
- Applied **panel OLS fixed-effects regression** to evaluate how external interventions influence governance outcomes, finding significant positive effects on state legitimacy ($p < 0.001$) and rule of law ($p < 0.001$) and negative effects on political stability ($p < 0.05$).
- Concluded that external intervention can strengthen state legitimacy and rule of law but may undermine political stability and weaken governance effectiveness when domestic institutions are already strong. [GitHub Link](#)
