SUMMARY

Full Stack Developer with expertise in Node.js, React, and cloud technologies including AWS. Proven track record in building scalable web applications and implementing efficient CI/CD and TDD practices. Demonstrated ability to optimize performance and mentor teams, ensuring secure and high-quality code delivery.

EDUCATION

University of South Florida

Masters, Computer Science

Aug 2023 - May 2025

EXPERIENCE

University of South Florida

Graduate Assistant

Jan 2024 - Aug 2024

Tampa, United States

- Engineered Angular-based research applications alongside faculty, achieving a 20% performance improvement by optimizing state management and implementing lazy loading to reduce initial load time by 35%.
- Synthesized insights from 20+ peer-reviewed academic sources to implement over 10 technical improvements, enhancing research validity by 40% and accelerating data analysis workflows by 25%.
- Integrated RESTful services and modular component design to streamline UI testing and improve maintainability, while collaborating in bi-weekly cross-functional meetings to align deliverables with evolving research objectives.

Ficus Realtime

Software Developer

Jun 2021 - May 2023

Hyderabad, India

- Developed scalable REST APIs and customer-facing web applications using Java and Spring Boot, reducing response time by 15% for multi-tenant systems supporting 10,000+ daily users and improving SQL performance by 30% through effective indexing and partitioning.
- Leveraged Test-Driven Development (TDD) practices with JUnit to increase test coverage by 28%, writing robust unit tests across the technology stack to ensure reliability.
- Automated screenshot validation using Selenium to monitor application downtime, aligning with team initiatives for test and release automation.
- Designed and maintained high-traffic applications using Spring MVC and coordinated seamless data migrations across Kafka clusters, optimizing connection pools and KMS configurations to support 99.9% uptime during enterprise modernization efforts.
- Conducted technical feasibility assessments with cross-functional teams to ensure 100% alignment between business requirements and technical deliverables, reducing requirement gaps by 35%.
- Transformed bug detection practices through test automation, enhancing identification rates by 60% and shortening deployment cycles from 3 weeks to 2 weeks.

ACADEMIC PROJECTS

Bank Management System

Academic Projects

- Engineered a comprehensive banking simulation system using Node.js and Express, processing 100+ concurrent test transactions with JWT authentication and achieving 99% error-free operations across 5+ banking workflows.
- Developed an intuitive Angular 13 GUI dashboard implementing 5+ core banking features (account creation, transfers, transaction history, password recovery), tested with 100+ simultaneous users and fortified with JWT token-based authentication and Bcrypt password hashing.

Movie Review Website

Academic Projects

- Created a responsive movie review platform cataloging 500+ movies, integrating Angular 13 frontend with Node.js/MongoDB backend to deliver real-time user interactions and secure RESTful data flows.
- Delivered 5+ features for user registration, login/logout, secure rating submissions, and review posting using RESTful APIs and JWT authentication.
- Structured user profiles, movie data, and ratings in MongoDB, enabling personalized recommendations and streamlined data retrieval.

Image Fusion & Crop Recommendation System

Academic Projects

- Applied advanced image fusion techniques on LISS-III and Sentinel-2 images to generate high-quality fused imagery.
- Designed and deployed an intuitive GUI in Django, achieving 95% accuracy in disease prediction through SVM and Decision Tree models.
- Secured a patent for a crop recommendation system that improved yield predictions by 15% by integrating soil nutrient and environmental data and help recommend better crops for regions according to the nutrient data in that areas.

SKILLS

- Programming:** Java, Python, Type Script, Java Script, C++, C, R, C#
- Web Technologies:** Angular 11+, React.js, HTML5, CSS3, Bootstrap 5, Material UI
- Backend Development:** Node.js, Express.js, Spring Boot, REST APIs, Microservices
- Database Management:** MongoDB, SQL Server
- DevOps Tools:** Git, GitHub, CI/CD, Docker, Kubernetes, Terraform, AWS Services, Jenkins
- Testing & Quality:** JUnit, Mockito, Test-Driven Development (TDD), Selenium, Automated Testing
