

Anudeep Allamsetty

Senior Software Engineer | Full-Stack Java Developer | Java/Spring Boot, APIs, Cloud (AWS & Azure)

Portfolio | LinkedIn | allamsettyanudeep.dev@gmail.com | Phone: (913)-303-1252 | GitHub

PROFESSIONAL SUMMARY

- **Java Full Stack Developer** with **5+ years** of experience building enterprise applications across **insurance, banking, pharma, and manufacturing sectors**. Proficient in **Java 17, Spring Boot, Angular 17, React**, and cloud-native stacks on **AWS and Azure**, with hands-on delivery using **Agile, DevOps**, and microservices patterns.
- **Modernized** enterprise systems into **Spring Boot microservices** on **AWS** with **Kafka, RabbitMQ**, and **Terraform**, achieving **60% scalability** gain and **75% faster** releases, while building secure **REST APIs (JWT, OAuth2, Okta)** and responsive **Angular (NgRx, AG Grid)** and **React UIs** with **40% faster load** time and **30% fewer integration defects**.

PROFESSIONAL EXPERIENCE

Client: Zurich Insurance Group, Overland Park, Kansas, USA

Role: Software Engineer

Jan 2024 – Present

- Transitioned legacy claims to **Spring Boot** microservices on **AWS EC2/S3** using domain-driven design, boosting platform scalability by 60% and cutting deployment time by 75% through **blue-green deployments** and processed **rollback pipelines**.
- Directed the rollout of **RESTful Java 17 APIs** with a robust **DTO layer** and **OpenAPI** documentation, streamlining partner onboarding and resulting in a 30% drop in integration defects as well as two new enterprise client acquisitions in one quarter.
- Delivered **Angular 17 + NgRx** analytics dashboards for real-time insights on over 1 million records, spearheading performance optimizations that **cut response times by 40%**, providing managers with access to critical claims data faster than ever before.
- Powered **Redis-backed caching** and collaborated with **SREs** to halve backend latencies, enabling the system to smoothly handle over **5,000 concurrent claim processes** during peak periods.
- Orchestrated **AWS infrastructure** provisioning using **Terraform** and **Helm**, eliminating environment drift and allowing **QA/UAT** deployments to run 50% faster with full environment parity.
- Drove end-to-end security enhancements by implementing **JWT/OAuth2** authentication and **Okta SSO**, passing all internal audits and achieving **zero unauthorized access incidents** for two consecutive years.
- Pioneered the adoption of **Docker** and **Kubernetes** for the **CI/CD pipeline**, more than doubling deployment reliability while reducing feature branch environment provisioning time by 50%.
- Launched **AWS Lambda functions** and **Amazon SQS queues** for **Orchestrated backend** event processing, lowering manual reprocessing tasks by 45% while maintaining complete regulatory audit trails.

Client: Seaboard Corporation, Merriam, Kansas, USA

Role: Java Full Stack Developer

Sep 2023 – Dec 2023

- Designed and developed backend services using **Java (Spring Boot)** with **Kafka** and **PostgreSQL** to power a real-time commodity pricing dashboard, automating feed updates, and cutting reconciliation time from hours to seconds.
- Engineered secured **REST APIs** using **Java, Spring Boot, DTO patterns**, and structured exception handling for order and inventory modules integrated with **RabbitMQ**, increasing processing throughput by 35%.
- Refactored legacy **Angular** components to a modular **React** architecture with **Cypress** regression testing, reducing **frontend production bugs by 25%** and improving long-term maintainability.
- Orchestrated **CI/CD** pipelines in **Azure DevOps** with test automation and gated approvals, reducing regression cycles by 40% and accelerating **UAT** handoffs during agile iterations.
- Deployed **containerized microservices** to **Azure Kubernetes Service (AKS)** with health checks and **auto-scaling**, reducing environment drift and achieving **zero-downtime** releases during double traffic load scenarios.
- Enhanced backend quality with **SonarQube** static analysis and **targeted code refactors**, reducing critical code smells by 80% and enforcing consistent **Java code standards** across teams.
- Tuned **PostgreSQL** queries for **shipment aggregation**, cutting dashboard **data load times from 7 minutes to under 2 minutes** a performance gain recognized by logistics leadership.

Client: Cognizant (Key Bank), Chennai, India

Role: Java Full Stack Developer

Aug 2021 – May 2022

- Refactored **legacy Struts** modules into **modern Spring Boot REST APIs**, cutting technical debt by 40% and increasing automated test coverage to 90% across onboarding workflows.
- Built a **React-based onboarding interface** with contextual form validations, reducing erroneous submissions by 30% and improving customer experience.

- Implemented **secure CI/CD pipelines with Jenkins, Docker, and Kubernetes**, enabling blue-green deployments and enforcing advanced authentication (JWT, CSRF, session controls), achieving **80% downtime reduction** and **zero critical audit findings**.
- Integrated **AWS DynamoDB feature flags** for runtime configuration, slashing feature rollout times and allowing instant enable/disable of new features across production environments.

Client: Solara Active Pharma Sciences Ltd, Chennai, India

Role: Java Developer

Mar 2019 – Jul 2021

- Improved **Spring Batch pipelines** with custom schedulers for simplified inventory restocking, cutting manual QA/ops effort by 70% and improving audit readiness across production environments.
- Migrated **legacy JSP/Struts workflows to React-based REST modules**, improving UI performance by 35% and reducing post-release defects by 25%.
- Connected **MongoDB for analytics and TTL archival**, reducing data storage costs by 15% and streamlining record retrieval for regulatory teams.
- Optimized **PL/SQL queries** for **audit reports**, cutting execution times by **over 60%** and **boosting analyst productivity in regulatory reporting**.

EDUCATION

- **Master's in Computer Science** - University of Central Missouri

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Solutions Architect – Associate - [LINK](#)
- Microsoft Certified: Azure Administrator Associate - [LINK](#)
- Oracle Certified Professional: Java SE 11 Developer - [LINK](#)

TECHNICAL SKILLS

- **Languages:** Java (8–17), JavaScript, TypeScript, SQL, Python, Bash
- **Frameworks & Libraries:** Spring Boot, MVC, Security, Batch, Hibernate, Angular (13–17), React.js, Redux, NgRx, REST APIs
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, SQS, CloudWatch), Azure (Blob, DevOps), Docker, Kubernetes, Helm, Terraform, Jenkins, GitHub Actions, SonarQube, OpenTelemetry, Prometheus, Grafana
- **Data & Messaging:** PostgreSQL, MySQL, Oracle (PL/SQL), MongoDB, DynamoDB, Redis, Apache Kafka, RabbitMQ
- **Testing & Security:** JUnit 5, Mockito, Cypress, REST Assured, Pact, JWT, OAuth2, Okta SSO, OWASP ZAP
- **Version Control & Tools:** Git, GitHub, Bitbucket, Maven, Gradle

Projects:

- **Job Board Application**
Tech Stack: Java, Spring Boot, MongoDB, React, Redux, Tailwind CSS
Constructed a **full-stack job portal** with secure role-based access for recruiters and candidates. Developed **JWT authentication**, **REST APIs**, and a responsive React/Tailwind UI for posting, applying, and tracking jobs.
- **Expense Tracker App**
Tech Stack: Java, Spring Boot, MySQL, React, Axios, Tailwind CSS
Built a personal expense management app with custom UI. Users can track expenses, visualize spending. Backend includes robust RESTful API with Spring Boot and MySQL data persistence.
