LinkedIn: <https://www.linkedin.com/in/anunay-dingari-a7b422209>

Data driven analyst studying an M.S. degree in Data Analytics & Engineering at George Mason University. Expertise to develop scalable AI / ML systems such as generative AI to healthcare, and perform advanced analytics on large-scale e-commerce, HR and operational data. Proficient in Python, R, SQL, Tableau, Docker, has a history of writing predictive models, data pipelines, and influential dashboards to support and inspire business views and power cross-functional teams. Experienced in solving complex business problems, process optimization and results improvements using machine learning, natural language processing, and statistical modeling. Passionate about leveraging analytics and artificial intelligence to deliver measurable value and continuous improvement in dynamic, high-growth environments.

Technical Skills

- **Data Visualization:** Tableau, Matplotlib, Excel, ThoughtSpot, Power BI.
- **AI/ML:** Generative AI, RAG, Lang Chain, LLM integration, Prompt Engineering, NLP, EHR summarization.
- **Programming and Analytics tools:** Python, Pandas, PySpark, R & SQL, Streamlit, GitHub, Docker, AWS (S3, Glue, Athena)
- **Data Management & Engineering:** Database Management, Multi-Criteria Decision Making
- **Project Management:** Business Analytics, Valuation, Financial Analysis

WORK EXPERIENCE

Mayo Clinic

Employer: SciEncephalon AI

Dec 2024 - Present

Discharge Summary Rewriter

- Developed an AI-based tool that can automatically re-write and summarize complex medical reports into simple readable medical discharges using OpenAI LLMs and Gradio, resulting in an increase of health literacy and patient understanding.
- The user-friendly solution is to design and execute NLP pipelines to simplify clinical texts both of MIMIC and MedlinePlus datasets using complex text summarization and readability indicators.
- To achieve the medical accuracy and yet retain simplicity of language in the young readers, the custom prompts and fine-tuning large language models were created.
- Constructed a framework of an interactive Gradio interface and allowed patient-facing summaries in real-time and expanded the access to non-technical users.
- Data quality and preprocessing of data performed to select and label clinical data to establish model performance and reliability.
- Demonstrated Python, NLP, large language modalities and healthcare data analytics experience and followed ethical AI data privacy laws and regulations of patient's data.
- It demonstrated good abilities to validate and measure performance and translate clinical language to plain English.

Clinical Note Summarizer (AI Powered EHR Assistant)

- Developed a Clinical notes summarization system that utilizes AI through Streamlit and OpenAI LLM to convert unstructured clinical notes into concise summaries ready to be record into the EHRs.
- Developed NLP pipelines with Lang Chain to retrieve relevant SOAP templates to extract medical key entities namely: medications, diagnosis, and follow-up steps to de-identified discharge summaries of the MIMIC-III hospital, thereby making clinical data more readily accessible and less time consuming to document.
- Applied advanced machine learning (LLMs, text classification and text extraction) to healthcare compliance by automating medical documentation to improve efficiency of clinics and doctor practices.
- Applied the solution to a nice user-friendly interface using Streamlit so that healthcare professionals can interactively load and review patient summaries.
- Performed data preprocessing, cleaning and annotation of large-scale clinical data (MIMIC-III), guaranteeing quality in training the high-level models and ensuring a robust evaluation.
- Adapted optimal prompt programming approaches that enhance effectiveness and contextual graphical representation of AI-testing smacked-off renderings, using continued feedback and error correction.
- Implemented the best practice in data privacy, HIPAA, and ethical AI in healthcare.

Amazon, India

Aug 2023 – Dec 2023

Machine Learning - Data Analyst

- Performed deep dive analysis and identification of root causation of FBA Merchant and Seller reimbursement requests characterizing fraud patterns and operation mistakes within a high-volume contact center setting.

- Identified and logged incidences of vendor fraud, distinguishing between those committed deliberately and those that were genuine mistakes, and giving extensive case notes on which to train and tune the AI/ML models and quick engineering, which would feed directly into model fine-tuning and better identification of risk.
- Used proprietary Amazon tools to capture the results of the investigation, organize the data entry points and provide actionable recommendations thus automating the fraud/risk related processes and creating the AI-powered decision making.
- Met weekly productivity and quality measures; surpassed the benchmark rate of accuracy and timeliness in case resolution in an active data-driven environment.
- Proven superior skills of pattern recognition and solution of problems to enable detection of non-obvious trends of lost or damaged inventory requests and has been able to enhance risk mitigation strategies of the business.
- Led and actively had control of several simultaneous investigations with short deadlines, with high standards of data policy and secrecy.
- Worked cross-functionally (in combination with product, engineering, and operations teams) to perfect fraud detection logic and automate more processes.
- Added to the culture of continuous improvement through sharing the best practices of investigations and sponsoring team learning activities.

PROJECTS

Jan 2024 – Present

Amazon Sales Performance Optimization

- Analyzed large-scale e-commerce sales datasets, extracting insights on sales performance, product category trends, and fulfillment outcomes using Python and Pandas.
- Performed descriptive analytics and statistical modeling (chi-square tests, linear regression) to identify sales drivers, uncover relationships between order status and shipping location, and predict revenue based on order volume and product category.
- Designed and developed robust data pipelines for ingesting, cleaning, and transforming high-volume Amazon sales data, ensuring accuracy and scalability for business analytics workflows.
- Created interactive dashboards and data visualizations (daily sales trends, order distribution bar charts, heatmaps, geo maps) to highlight regional demand, fulfillment issues, and sales seasonality—supporting strategic business decisions for Amazon and third-party sellers.
- Recommended a build-vs-buy analytics solution, advocating for open-source tools (Python, Pandas, visualization libraries) to maximize flexibility, reduce costs, and enhance data privacy.
- Collaborated in a cross-functional project team to deliver actionable insights, driving improved inventory management, product visibility, and customer service strategies.
- Translated data insights into business recommendations that help Amazon sellers optimize inventory, identify regional growth opportunities, and minimize order cancellations.

Boston Crime Data Analysis

- Analyzed over 319,000+ records of Boston crime incident data utilizing Python, Pandas, and SQL and revealed insightful details in the form of actions to act upon to limit crime after analyzing pattern analysis, seasonal change, and geographical areas hotspots.
- Created and used geospatial visualizations (heatmaps, cluster maps) in Matplotlib and Plotly to aid in determining the high-incidence crime areas to help ensure data-based decision and resource planning.
- The methods used were a Principal Component Analysis (PCA) and K-Means clustering to segment the data by location and type of incident making it more feasible to create predictive policing and improve the predictivity without interpreting too much of the data.
- Automated data pipelines to clean, transform and validate raw data to enhance data quality and scalable analytics processes.
- Collaborated with my team to build important research questions, provide analytics solutions and propose improvement in the process using results of statistical tests and machine learning.

LEADERSHIP EXPERIENCE

BITS PILANI, HYD

Team Leader

Hyderabad, India

January 2022 - July 2022

- Guided marketing strategies for events on campus and handled sponsorship, with a team of 10 people and collaborated with various external organizations.
- Organized events effectively and maintained positive partnerships with sponsors to increase the events' visibility and popularity.
- Oversight of partnerships and the efforts related to sponsorships. Assisting the team to carry out marketing activities in the most effective way.
- Creating and keeping relationships with sponsors, clients and important people, supporting the team, managing the finances for marketing and strategies.

- Making and executing marketing strategies to help sell products or services.

EDUCATION

George Mason University
Master's in data Analytics and Engineering

Fairfax, Virginia
Jan 2024 -Dec 2025

Birla Institute of Technology and Science, Pilani
July 2019 – May 2023

Hyderabad, India B.E.Chemical Engineering
