EXPERIENCE SUMMARY

Accomplished data-driven biotech professional with 4+ years of hands-on experience in laboratory testing and statistical quality assurance. Transitioning into data science through Data Science and Business Analytics post-graduate course to expand skillset and apply data analytics to further optimize healthcare delivery practices for patient care. Demonstrated ability to collaborate with cross-functional teams and draw actionable insights to drive operational and business decisions.

PROFESSIONAL EXPERIENCE

Laboratory Technician II, Cepheid | Sunnyvale, CA

09/2020 – 12/2024

- Produced and verified an average of 15-20 Device History Records (DHR) per day on production output data adhering to Good Documentation Practices (GDP)
- Processed Manufacturing Execution System (MES) to capture test data and monitor production processes, thus reducing product defects by 30%
- Led and trained new team members on testing protocols, reporting data results, reviewing documents in adherence to quality regulatory compliance, thus improving production workflow by 50%
- Utilized Minitab to tabulate and analyze Statistical Process Trends (SPT) across production batches to detect data trend abnormalities, thus helping inform corrective actions and reducing variation by 30%
- Collaborated with cross-functional departments such as engineering, quality control, and product transfer to ensure timely results
- Achieved Make It Happen Award in April 2022 and May 2024 for exceptional dedication and contributions to the team

TECHNICAL SKILLS

- **Languages/Tools:** Python, Minitab
- **Machine Learning:** Classification (Decision Trees, Random Forests, Bagging, and Boosting), Linear Regression Modeling, Clustering (K-Means and Hierarchical), Principal Component Analysis (PCA)
- **Statistics and Probability:** A/B Hypothesis Testing, Data Visualization

DATA SCIENCE PROJECTS

EasyVisa Project | Machine Learning Classification for Visa Prediction

02/2025 – 03/2025

- Implemented ensemble techniques (Decision trees, random forests, bagging, and boosting) on dataset of 25,480 visa records to predict application outcomes
- Tuned hyperparameters and finalized XGBoost model, with F1 score of 0.82, indicating model's high performance, minimizing false positives and false negatives
- Demonstrates transferable applicable classification models to healthcare cases such as predicting patient's risk

ReCell Project | Linear Regression on Device Pricing

01/2025 – 02/2025

- Built linear regression model to predict the prices of 3,454 refurbished devices and identified key price factors through feature importance
- Achieved R^2 value of 0.83, resulting in 83% of variation in the dependent variable and indicating good data fit
- Parallels healthcare financial cost forecasting or equipment defect outcomes in order to make clinical decisions

E-news Express Project | A/B Testing on News Landing Page

12/2024 – 01/2025

- Analyzed user engagement data of 100 users with A/B hypothesis testing methods (Chi-Square, ANOVA, Shapiro-Wilk, Levene) and performed data visualization to evaluate landing page effectiveness
- Calculated p-value to be 0.000139, resulting likelihood of new subscribers on landing page
- Applicable to digital healthcare cases such as patient portal interfaces, health apps, and marketing

EDUCATION

Post Graduate Program in Data Science and Business Analytics, Online

09/2024 – 05/2025

Texas McCombs School of Business

San Jose State University, San Jose, CA

08/2014 – 05/2019

Bachelor of Science in Biomedical Engineering
