EDUCATION

Bachelor of Science in Computer Science | Purdue University, West Lafayette, IN

Aug 2021 - May 2025

Concentration: *Software Engineering* | Minor: *Psychology* | GPA: 3.57

Awards: *Dean's List, Semester Honors, Jandos Scholarship*

SKILLS

Programming Languages: Java, Python, SQL (MySQL, SQLite), JavaScript, TypeScript, HTML, CSS, C, C++, Bash, R

Frameworks & Tools: Spring Boot, Flask, React, React Native, Vite, Tailwind CSS, AWS (DynamoDB, S3), Docker, Kubernetes, REST APIs, Android Studio, Postman, JUnit, Git, Vim, Agile, Jira, Dynatrace, Streamlit, Figma, LibGDX

AI/ML & Data: Hugging Face, FAISS, LangChain, Pandas, NumPy, Matplotlib, Seaborn, TensorFlow, Keras, Jupyter, Retrieval-Augmented Generation (RAG), Exploratory Data Analysis, Statistical Data Visualization, Feature Selection & Engineering, Neural Networks

EXPERIENCE

Software Engineer | *PolicyEngine (Remote)*

July 2025 – present

- Contributing to the **open-source** development of PolicyEngine's **API** platform, migrating legacy **Flask** endpoints for user-policy management to a modernized architecture, improving scalability and reducing response times by **~10%**.
- Enhanced the web platform's front-end data rendering in **React** and **JavaScript**, resolving UI ordering issues for state-level policy parameters to ensure accurate presentation of high-volume datasets and improve user experience.

Software Development Intern | *Indiana Farm Bureau Insurance, Indianapolis*

May 2024 – Aug 2024

- Increased support engineer productivity by **20%** weekly by developing a **Java** and **Spring Boot REST API** that automated log identification for error tickets, integrating **Jira** and **Dynatrace** APIs.
- Reduced system-detected issues by **6%** by identifying and resolving backend errors in insurance policy management software, enhancing product reliability and data accuracy.

Software Engineering Intern | *Sports.Excitement LLC (Remote)*

Jul 2023 - Aug 2023

- Developed multiple front-end components using **HTML**, **CSS**, **JavaScript**, and **React** for the 'Velosaty' website, a job search tool designed for retired athletes. Translated Figma designs into responsive user interfaces.
- Collaborated with cross-functional teams using **Agile** and **Jira** for efficient product design and project management.

Undergraduate Research Assistant | *Nuvve Corp (The Data Mine, Purdue University)*

Aug 2022 - May 2023

- Engineered an Agile-driven energy price prediction system using machine learning, training diverse models (RNNs, DNNs, LSTMs) in **Python** with **Jupyter Notebook**, **Pandas**, **NumPy**, **Matplotlib**, **TensorFlow**, **Seaborn**, and **Keras**.
- Identified **LSTM** as the most accurate model for energy price forecasting, attaining a **Mean Squared Error of 785.77** and showing an **8% reduction in MSE** compared to alternative models.
- Conducted comprehensive research on hyperparameter tuning techniques to strategically optimize models and reduce MSE.

PROJECTS

QuickNews | *Python, LangChain, Streamlit, Hugging Face, FAISS*

June 2025 – present

- Built an **LLM-powered** question-answering tool using **Retrieval-Augmented Generation** with **FAISS** and **Hugging Face** to extract insights from user-provided news articles.
- Developed a **Streamlit** interface for processing URLs, running **semantic search**, and displaying **context-backed answers**.

ResHub | *Java, Spring Boot, React Native, FAISS, AWS (DynamoDB, S3), Botpress, Agile*

Jan 2025 – May 2025

- Engineered a scalable **cross-platform** mobile app for roommate matching at Purdue, featuring a **React Native frontend** and **Java Spring Boot backend**, optimized with **AWS DynamoDB & S3** and seamless swiping UI.
- Implemented key **full-stack** components including **AI** chatbot support, user safety tools, and **FAISS**-based personalized discovery using across **8+ user workflows**, contributing to a more responsive and engaging experience.

Moonships Game | *Java, LibGDX, Agile*

Sep 2023 - Dec 2023

- Spearheaded a dynamic team to create a captivating 2D desktop food delivery game using **Java LibGDX**.
- Achieved deployment of **60 features across 6 levels**, encompassing customizations, boosts, and Purdue-themed elements.

Shell Project | *C, C++, bash, csh*

Mar 2023 - Apr 2023

- Developed a robust shell interpreter with **C**, **C++** integrating key functionalities from popular shells like **bash**, **csh**.
- Implemented advanced features including command parsing, signal handling, built-in functions, subshells, and wildcards.

CO-CURRICULAR ACTIVITIES

Purdue Society of Women Engineers | *Executive Board Member, Volunteer*

Purdue Women in Science Program | *Mentor*

Rewriting the Code, Girls Who Code | *Member*

Purdue's Hello World Hackathon | *Organizer*
