

ANUSRI METTALA

(463) -279-9608 | anusreemettala@gmail.com | [LinkedIn](#)

EDUCATION

Purdue University, Indianapolis, IN
Master of Science in Computer Science

August 2023 – May 2025

Jawaharlal Nehru Technological University, Hyderabad, India
Bachelor of Technology in Computer Science and Engineering

August 2018 – June 2022

TECHNICAL SKILLS

Languages: Python, Java, Go, TypeScript, HTML, CSS, JavaScript, ReactJS, NodeJS, Spring Boot, RESTful API, Gin, Liquid Markup

Databases: MySQL, MongoDB, PL/SQL, PHP, SQL Server

DevOps & CI/CD: Docker, Jenkins, Git, Kubernetes, JSON, GitHub, Bitbucket, AWS, Linux, Grafana, RabbitMQ

Tools: Visual Studio, VS Code, SQL Workbench, Postman, Jest, MS Office, Jest, Microsoft Excel, WordPress, Unit Testing, Nginx, Figma

Product Management: Product Lifecycle Management, Jira, Scrum, Agile, Power point, MS Office, Data analysis, SDLC

PROFESSIONAL EXPERIENCE

Application Administrator | Indiana University, Indianapolis

July 2025 – Present

- Develop and customize Slate CRM portals, integrating workflows and dynamic content to enhance the applicant and staff experience.
- Automated student data integration between Slate CRM and the Student Information System (SIS) using ETL workflows, reducing manual entry and improving data accuracy.
- Designed backend APIs to support admissions and enrollment processes, improving system interoperability and real-time data flow.
- Built and maintained web applications and portals using React streamlining user interactions and modernizing the admissions platform.
- Created dashboards and reporting modules in Slate to deliver actionable insights on admissions data, improving reporting efficiency by 30%.

Web Programmer | The Polis Center, Indianapolis, IN

May 2024 – July 2025

- Built secure, scalable RESTful APIs in Go (Gin), reducing response time by 45% and integrating GIS data into the SAVI Community platform for location-based insights.
- Refactored codebase into MVC and architected modular backend layers with handlers, services, and GORM models (SQL Server), improving maintainability and team efficiency.
- Automated deployments with GitHub Actions, Docker, Kubernetes, and Helm, cutting manual time by 40% and enhancing CI/CD reliability, explored Terraform for infrastructure automation.
- Implemented AWS Lambda workflows to fetch data from DynamoDB, store in S3, and manage plan data in RDS, streamlining processes and operational efficiency. Integrated JWT authentication with custom middleware, strengthening security and enabling role-based access control.

Full Stack Developer | Comet Lab, Indianapolis, IN

September 2023 – May 2024

- Developed CometVendorHub platform using Java, ReactJS, Wordpress and MySQL, enabling local vendors to manage orders, customers, and dashboards through a responsive and real-time web interface.
- Engineered a team collaboration suite in Java with live task updates and project milestones, improving team efficiency.
- Revamped REST APIs with NodeJS and Axios, introducing async batch loading and pagination improving the responsiveness by 50%.

Application Developer | DBS Bank, India

July 2022 – August 2023

- Developed and implemented REST APIs using **Spring Boot, Spring Security, and JPA** for banking applications, enhancing functionality, improving system performance and reducing user onboarding time by **20%**.
- Enhanced UI components with ReactJS and Typescript, streamlining user interactions and reducing production issues by 20%.
- Collaborated with the Data Science team to extract unstructured text and connect Elasticsearch with the UI for semantic search with an open-source NLP-based LLM framework and knowledge retrieval, supporting **250+** daily active users.
- Implemented security models and access controls using Java, safeguarding sensitive information.
- Implemented **CI/CD** pipelines with Jenkins, Docker, and GitHub, incorporating automated testing to ensure reliable deployments.
- Deployed microservices to Cloud Foundry (**PCF**), automating scaling and monitoring, which enhanced system reliability and fault tolerance. Contributed to JFrog Artifactory migrations, streamlining artifact management and ensuring smoother, more secure software delivery pipelines.
- Troubleshoot and resolved critical production issues, addressing customer support requests and collaborating with QA teams, resulting in a 15% reduction in defect reports and improved customer satisfaction.

Intern | DBS Bank, India

January 2022 – June 2022

- Refactored codebases, resolving critical issues flagged by SonarQube and Fortify, improving maintainability and reducing code complexity by 30%.
- Participated in manual and automated testing, identifying and resolving latent bugs, and applied advanced debugging skills to reduce issue resolution time by 20%. Automated repetitive tasks using batch scripting, boosting team productivity and cutting manual efforts by 30%.

PERSONAL PROJECTS

Smart Email Assistant - *React, Material UI, Spring Boot, Java 17, Gemini API, Chrome Extension*

[Code](#)

Bird Species Identification using CNN - *Python, TensorFlow, CNN, Image Classification*

[Code](#)

CERTIFICATIONS

- AWS Certified Developer – Associate Amazon Web Services (AWS)**
- Cisco Networking Academy® Program** apprenticeship acquired skills in networking fundamentals and system administration.
