

PROFESSIONAL SUMMARY:

- Over 6+ years of experience as a .NET Developer, specializing in C# and VB.NET for robust application development.
- Proficient in building scalable microservices and backend systems using .NET Core and ASP.NET Core across multiple client projects.
- Expert in developing web services using ASP.NET Web API, enhancing system interoperability and API responsiveness.
- Skilled in end-to-end development using Visual Studio , including debugging, deployment, and performance profiling.
- Experienced in deploying and managing applications on Microsoft IIS, ensuring reliable and continuous web service availability.
- Utilized Azure and AWS cloud services including App Services, EC2, and Elastic Beanstalk for scalable enterprise application hosting and monitoring.
- Developed responsive frontends using Angular, React.js, Razor, and Blazor based on project context and UI requirements.
- Implemented ORM with Entity Framework Core and NHibernate for optimized data access in SQL Server, Oracle, and PostgreSQL.
- Leveraged Autofac, Unity, and Castle Windsor for dependency injection to promote modular and testable architecture.
- Employed Azure SQL Database for high-performance data storage and streamlined data operations.
- Applied SignalR and WebSocket-based communication for real-time updates in high-throughput environments.
- Proficient in managing complex database systems with Oracle, ensuring robust data integrity and security.
- Extensive experience using Azure cloud services including App Services, Functions, Service Bus, and Azure Monitoring for building and managing scalable distributed applications.
- Experience with both Azure and AWS ecosystems, including Azure DevOps, Cosmos DB, and AWS CloudWatch, CodePipeline, and RDS depending on client environment.
- Utilized Azure DevOps and AWS CodePipeline for version control, pipeline automation, CI/CD automation and deployment workflows across client projects.
- Experienced in containerizing applications using Docker and orchestrating deployments with Azure Kubernetes Service (AKS) via CI/CD pipelines in Azure DevOps.
- Experienced in automated testing using xUnit, NUnit, and MSTest as part of TDD and CI/CD workflows.
- Utilized Azure Cosmos DB to handle high-volume distributed data operations with consistency and scalability.
- Proven adaptability and a continuous learning mindset in fast-paced development environments.

TECHNICAL SKILLS:

Programming Languages	C#, VB.NET, Java, Python, JavaScript, Swift
Web Technologies & APIs	HTML, CSS, Angular, TypeScript, Bootstrap, React.js, Node.js, XML, PHP, jQuery, JSF, RESTful APIs
Frameworks & Libraries	.NET Core, ASP.NET Core, ASP.NET Web Forms, ASP.NET MVC, Web API, Razor, Blazor, Entity Framework Core, NHibernate, SignalR, JSF, WCF, Castle Windsor, Unity
Database Systems	SQL Server, Azure SQL Database, PostgreSQL, Oracle
Cloud & DevOps	Azure App Services, Azure DevOps, Azure Functions, Azure Cosmos DB, Azure Monitoring (Application Insights, Log Analytics), Azure Service Bus, AWS EC2, AWS Elastic Beanstalk, AWS RDS, AWS S3, AWS CloudWatch, AWS CodePipeline, CI/CD Pipelines
Development Tools	Microsoft Visual Studio, Azure Devops, Microsoft SQL Server Management Studio, Git, Postman, Swagger, IntelliJ IDEA, SharePoint, Papa Parse, AJV
Testing & Quality	xUnit.net, MSTest, NUnit, Test-Driven Development (TDD), Code Reviews
Web Servers	Microsoft IIS, Kestrel

CI/CD and Automation	Automated deployment using Azure Devops, Docker, Kubernetes (AKS), Continuous Integration and Deployment.
Team Collaboration	Agile and Scrum methodologies, Code Review Practices, Cross-Functional Team Collaboration.
Security Best Practices	Secure API Development, Data protection Compliance

PROFESSIONAL EXPERIENCE

Client: Edward Jones, St. Louis, MO

Jun 2024 - Till Date

Role: .NET Developer

Responsibilities:

- Aligned financial software solutions with business requirements through effective collaboration with cross-functional teams.
- Implemented MVC architecture to enhance application scalability and maintainability in financial environments.
- Led the design and implementation of new features to enhance user experience and application functionality.
- Advocated for adherence to code quality and architectural best practices during team discussions and code reviews.
- Developed and maintained scalable financial service applications using C# (4.5), ASP.NET Core, and .NET Core (2.2).
- Created dynamic web applications using Angular, TypeScript, HTML5, CSS3, and Bootstrap, focusing on user interaction and responsiveness.
- Designed secure RESTful APIs using ASP.NET Core, facilitating secure data transfer and integration with backend systems.
- Enabled real-time data processing and interactions using SignalR, improving client engagement.
- Utilized Entity Framework Core (2.2) with Azure Cosmos DB and SQL Server to manage complex financial data effectively.
- Employed Visual Studio (2017) for streamlined development, debugging, and deployment of financial applications.
- Applied security best practices in application development to protect sensitive financial data.
- Streamlined data management and improved access speeds using EF Core and optimized SQL queries.
- Customized financial applications to meet evolving market demands and comply with regulatory requirements.
- Conducted robust unit testing using xUnit.net, ensuring reliability and performance of financial modules.
- Ensured application reliability and data integrity through comprehensive testing and quality assurance.
- Configured and managed Azure App Services to deploy and monitor high-availability financial applications.
- Optimized financial applications for performance and scalability using Azure App Services.
- Performed performance tuning of applications to handle high-volume financial transactions efficiently.
- Monitored live financial applications using Azure App Services to ensure optimal performance.
- Automated continuous integration and deployment(CI/CD) pipelines using Azure DevOps, enhancing development efficiency.
- Maintained and updated documentation for financial software solutions, facilitating knowledge sharing and collaboration.

Client: Cardinal Health, Dublin, OH

Jun 2023 - May 2024

Role: .NET Web Developer

Responsibilities:

- Collaborated with healthcare professionals to translate user requirements into functional software solutions.
- Maintained rigorous data compliance and security standards, aligning with healthcare regulations and patient privacy laws.
- Architected healthcare management systems using C#, enhancing patient data processing and care coordination capabilities.
- Designed RESTful services using ASP.NET Core, enabling efficient data exchange between frontend and backend systems.
- Configured application logging and monitoring with Azure tools, maintaining high operational standards and enabling quick issue resolution.

- Created scalable microservices with .NET Core, managing complex health records and transaction processing efficiently.
- Built secure web applications using ASP.NET Core and Razor Pages, tailored to the needs of healthcare providers and patients.
- Enhanced user interfaces with React, improving user engagement and operational efficiency in healthcare management tools.
- Leveraged Blazor for component-based UI in internal admin dashboards, providing a modern alternative for .NET-based frontend logic.
- Integrated MS SQL Server 2019 and developed optimized queries to securely manage healthcare data and ensure compliance.
- Used Entity Framework Core for efficient data manipulation and management.
- Employed Azure Service Bus for asynchronous communication across distributed healthcare services, ensuring data consistency and reliability.
- Developed interfaces with Azure Service Bus to facilitate reliable messaging and integration within healthcare applications.
- Applied advanced features using C# 7.3, optimizing system performance and code readability.
- Utilized Visual Studio 2019 for development, leveraging its advanced features to streamline the development process.
- Used Autofac for dependency injection, improving modularity and simplifying testing.
- Employed MSTest for comprehensive testing of application modules, ensuring robustness and data integrity.
- Configured and deployed applications using Azure App Services, enabling scalable and highly available healthcare applications.
- Integrated continuous integration and deployment pipelines with Azure DevOps, streamlining release processes and system maintenance.
- Containerized .NET Core microservices using Docker and deployed them to Azure Kubernetes Service (AKS) using automated CI/CD pipelines, ensuring scalable and consistent deployments across environments.
- Enhanced application responsiveness and cross-platform performance using .NET Core's cross-platform features.
- Conducted performance optimizations for web services, ensuring efficient and fast processing of healthcare transactions.

Client: Quinstreet, Orlando, FL

Oct 2020 - Nov 2022

Role: .NET Full Stack Developer

Responsibilities:

- Collaborated with stakeholders and business analysts to gather marketing automation requirements for lead-generation platforms.
- Designed scalable microservices using .NET Core and implemented service contracts through ASP.NET Core Web API.
- Developed interactive and responsive user interfaces using Angular 10+, TypeScript, and Bootstrap, improving customer engagement and usability.
- Managed relational data using PostgreSQL, integrated via NHibernate for object-relational mapping and LINQ support.
- Applied Unity for dependency injection, enhancing modularity and enabling mock testing for service layers.
- Configured hosting and scaling using AWS EC2 and managed environments via AWS Elastic Beanstalk.
- Integrated backend APIs and frontend deployment pipelines using AWS CodePipeline, streamlining version control and releases.
- Utilized AWS RDS (PostgreSQL) for high-availability transactional data storage with failover protection.
- Stored static Angular assets and media files in AWS S3, ensuring global availability and faster content delivery.
- Set up AWS CloudWatch for real-time application monitoring, log aggregation, and proactive issue alerting.
- Conducted unit testing using xUnit.net, validating API endpoints, business logic, and frontend data bindings.
- Reviewed peer code, optimized performance bottlenecks, and tuned service response times under load.

- Maintained comprehensive documentation including API definitions, deployment runbooks, and service diagrams.
- Delivered production support and ongoing enhancements following Agile Scrum practices and stakeholder feedback.

Client: Aufait Technologies Pvt. Ltd., Bangalore, India

Oct 2018 - Sep 2020

Role: Software Developer

Responsibilities:

- Collaborated with design teams to ensure user-centric software development for e-commerce solutions.
- Managed project timelines and deliverables using Agile methodologies, ensuring efficient project execution.
- Developed comprehensive documentation to support ongoing maintenance and future upgrades.
- Castle Windsor applied for advanced dependency management and architecture control in large-scale systems.
- Designed scalable and modular systems for e-commerce workflows with emphasis on maintainability and reusability.
- Utilized VB.NET to develop and enhance e-commerce platforms, improving transaction processing.
- Developed web services using ASP.NET Web API, enabling efficient system communication and 3rd-party integration.
- Enhanced the user interface with responsive web technologies like HTML5 and CSS3 for optimal user experience.
- Employed NHibernate for ORM with Oracle, streamlining complex data operations and improving performance.
- Configured Microsoft IIS for hosting and managing enterprise-grade web applications.
- Used Microsoft Visual Studio 2015 for end-to-end development, debugging, and deployment.
- Integrated Azure cloud services for improved scalability, availability, and performance under high traffic.
- Applied security protocols to protect user data and secure online transactions.
- Optimized application performance to handle peak user traffic and transaction volumes.
- Implemented robust unit testing using xUnit.net, ensuring high test coverage and reliability.
- Coordinated with QA teams to uphold high standards of software quality through continuous delivery.
- Maintained and upgraded e-commerce modules regularly based on customer feedback and usage data.

EDUCATION

Masters in Computer Science

Dec 2024

Bachelors in Information Technology

Jun 2019
