

Anvitha Malineni

Shelby Township, Michigan

Software Test Automation Engineer

E-Mail: anvimaautomation@gmail.com

Mobile No: +1 9892493699

Profile Summary

Having overall **5+ years** of experience in manual and automated testing. Proficient in Selenium WebDriver, TestNG, Python, and Postman, with a solid understanding of SDLC and STLC. Experienced in creating and executing robust test strategies, developing custom frameworks, and ensuring defect-free software delivery. Strong communicator and team collaborator with a passion for quality and process improvement.

Technical Skills

- **Testing Tools:** Selenium WebDriver, TestNG, Postman, JIRA, Bugzilla
- **Programming Languages:** Python, Java
- **Frameworks:** POM, TestNG, Maven
- **Testing Types:** Functional, Regression, Sanity, Smoke, UAT, API Testing
- **Machine Learning:** scikit-learn, Pandas, NumPy
- **Concepts:** SDLC, STLC, Agile, Model Evaluation, Data Preprocessing, Azure DevOps(ADO)

Professional Experience

3i Infotech Ltd | Software Test Automation Engineer / QA Analyst | April 2020 – Present
Client: CRISIL Limited

Project 3: MYRON

- Designed to provide a **low-code interface** that enables users to create and customize UI designs efficiently through the application.
- Developed a **reusable Selenium framework** to automate dynamic UI elements.
- Increased test efficiency by integrating automation scripts into **CI/CD pipeline**.
- Partnered with business analysts to ensure requirement traceability and comprehensive test coverage.
- **Integrated API test automation using Postman/Newman** into CI/CD, reducing API regression execution time by 50%.
- **Configured automated runs on BrowserStack** to expand testing coverage across devices and browsers.
- **Developed custom XPath and CSS selector strategies** to handle dynamic UI elements, reducing script maintenance by 35%.
- **Implemented parallel test execution** using TestNG, cutting total regression execution time significantly.
- **Enhanced reporting** by integrating Extent Reports/Allure, providing detailed execution summaries for stakeholders.
- **Created reusable utility functions** for file uploads, dropdown handling, and dynamic waits, improving script reusability.
- **Collaborated closely with UI/UX designers** to ensure design consistency and usability compliance.
- **Validated database transactions** using SQL queries to ensure data integrity after front-end operations.
- **Adopted shift-left testing practices** by reviewing user stories early, identifying potential defects before development completion.
- **Automated smoke test suite** to run on every build deployment, ensuring critical functionality stability.
- **Tracked test coverage metrics** and presented weekly QA status reports to project managers.

Project 2: AI/ML Development Project

- Built ML models in Python using scikit-learn to predict compliance risks with 85% accuracy.
- Cleaned and transformed datasets using Pandas and NumPy for model input.

- Integrated predictive output into QA workflows for proactive validation.
- Automated evaluation reporting and model testing using Python scripts.
- **Mentored junior QA engineers** on Python automation best practices for model validation.
- **Performed end-to-end testing** of ML output integration, covering UI, API, and database layers.

Project 1: Euphon

- Worked on the creation of bulk compliance contacts and affiliations for companies.
- Identified test requirements from user stories and acceptance criteria; created detailed test plans and test cases in Azure DevOps (ADO).
- Created and executed 100+ test cases, increasing regression test coverage by 40%.
- Automated critical UI workflows using Selenium and TestNG, reducing manual testing by 60%.
- Logged and tracked 150+ bugs using ADO, working closely with development teams to ensure timely fixes and retesting.
- Contributed to sprint planning, reviews, and daily scrums in Agile environment.
- **Implemented cross-browser automation testing** using Selenium Grid, ensuring compatibility across Chrome, Firefox, and Edge.
- **Built data-driven automation scripts** to validate multiple input scenarios, improving coverage for complex workflows.

Education

Bachelor of Engineering in Computer Science from QIS COLLEGE OF ENGINEERING AND TECHNOLOGY 2016-2020
