SUMMARY

- 5 years of experience as a Data Analyst working in Healthcare, Banking, and Supply Chain projects.
- Strong in SQL, Python, Power BI, Tableau, and advanced Excel for reporting and analysis.
- Hands-on experience building automated ETL pipelines using Airflow, SSIS, Talend, and Azure Data Factory.
- Worked with cloud data platforms such as BigQuery, Snowflake, Redshift, AWS (S3, Athena), and Azure.
- Supported predictive modeling using Logistic Regression, Random Forest, XGBoost, and TensorFlow.
- Created dashboards and KPIs used by executives and business teams for decision-making.
- Improved data quality, performance, and reporting efficiency across multiple projects.
- Experience working with Data Engineers, Data Scientists, and business stakeholders in Agile teams.
- Comfortable handling large datasets, troubleshooting data issues, and delivering clear insights.

EXPERIENCE

Data Analyst

McKesson Corporation, TX, USA

Aug 2023 – Present

Project: Health Insights Analytics Platform

- Designed and automated **ETL workflows** with Airflow and Salesforce, integrating claims, pharmacy, and patient datasets into unified analytical views
- Developed and deployed **AI/ML predictive models** (Scikit-learn, TensorFlow) for patient risk stratification, readmission prediction, and healthcare cost forecasting.
- Implemented **Generative AI modules** using OpenAI APIs and LangChain to automatically summarize patient records and create contextual insights for clinicians, improving decision support efficiency.
- Built **Power BI dashboards** using DAX and custom visuals to visualize claims, utilization, and engagement metrics, empowering data-driven actions across business and clinical units.
- Enhanced BigQuery pipelines to handle large-scale claims and pharmacy datasets, ensuring optimized query performance and scalability.
- Developed **SSIS ETL packages** to integrate disparate healthcare data systems, ensuring consistent and governed data flows across multiple departments.
- Created **automated data validation and anomaly detection scripts** in Python to ensure continuous monitoring of data integrity, minimizing reporting discrepancies.
- Applied **advanced statistical methods (ANOVA, regression, clustering)** to identify performance gaps and treatment effectiveness patterns across patient cohorts.
- Utilized AWS (S3, Athena, Redshift) for cloud-based analytics and HIPAA-compliant data storage, enabling secure collaboration between technical and clinical teams.
- Collaborated with data scientists to implement **LLM-based analytics assistants** for internal stakeholders, automating repetitive reporting tasks and improving analytical turnaround.

Technologies & Skills Used:

Airflow, Salesforce, SSIS, Python, Scikit-learn, TensorFlow, OpenAI APIs, LangChain, SQL, BigQuery, AWS (S3, Athena, Redshift), Power BI (DAX, custom visuals), Statistical Analysis (ANOVA, regression, clustering), Data Validation & Anomaly Detection, Healthcare Analytics (claims, pharmacy, patient datasets), Generative AI, LLM-based Assistants, Cloud Data Warehousing, HIPAA-compliant Data Storage

Data Analyst

Capgemini, India

May 2019 – June 2022

Project 1: Personalized Financial Intelligence Platform

- Built **AI/ML-driven analytics pipelines** in Python for automated ingestion, transformation, and modeling of daily financial transactions.
- Implemented **TensorFlow- and Scikit-learn-based models** for credit scoring, fraud detection, and risk forecasting using historical customer data.
- Developed **automated financial reporting workflows** in Alteryx and Power BI to centralize metrics and support real-time executive dashboards.
- Conducted **A/B and multivariate testing** to evaluate product features, informing customer engagement strategies.
- Designed **customer segmentation models** using clustering algorithms to identify high-value customers and tailor marketing strategies.
- **Supported Salesforce-based reporting alignment** where customer segmentation and financial readiness data intersected with CRM systems.
- Collaborated with data engineers to deploy predictive models into production using CI/CD and Azure ML pipelines, improving operational automation.
- Created **feature engineering frameworks** for credit and risk datasets to enhance model interpretability and business usability.

Project 2: Digital Supply Chain Transformation

- Designed and optimized **SQL queries and Redshift pipelines** for multi-source supply chain datasets, enabling real-time inventory and supplier analytics.
- Deployed **Snowflake-based warehousing solutions** to centralize SKU-level data, supporting predictive demand forecasting and order optimization.
- Streamlined ETL processes with **Talend and Python automation scripts**, improving data consistency and reducing manual dependencies.
- Built **Tableau dashboards** visualizing inventory trends, shipment delays, and supplier KPIs for proactive supply chain planning.
- Applied **machine learning models** for demand forecasting and inventory optimization, supporting data-driven operational efficiency.
- Partnered with business analysts and logistics teams to translate insights into action plans for procurement, stock management, and vendor performance.

Technologies & Skills Used:

Python, TensorFlow, Scikit-learn, Alteryx, Power BI, Tableau, SQL, Redshift, Snowflake, Talend, Salesforce, Azure ML, CI/CD Pipelines, Feature Engineering, Machine Learning (credit scoring, fraud detection, risk forecasting, demand forecasting, inventory optimization), Statistical Testing (A/B, multivariate), Clustering & Customer Segmentation, ETL Workflow Automation, Supply Chain Analytics, Financial Analytics

EDUCATION

Master of Science in Computer Science - Wichita State University, Wichita, KS, USA

Bachelor of Technology in Computer Science and Engineering – Lovely Professional University, Punjab, India

CERTIFICATIONS

- **AWS Certified Data Engineer – Associate - Amazon Web Services (AWS)** Issued Jan 2025 · Expires Jan 2028
- **Apache Spark Essential Training – LinkedIn** Issued Feb 2021
- **AWS Fundamentals: Going Cloud-Native – Coursera** Issued Aug 2020
