

ABHISHEK PATEL

abhishekcpatel1012@gmail.com | (984) 800-2646 | LinkedIn

Summary

Highly skilled Data Science graduate with a strong foundation in data analysis, predictive modeling, and financial forecasting. With hands-on experience in Agile methodologies, data visualization tools like Power BI, and proficiency in programming languages such as Python and SQL, I have successfully led data-driven projects in both IT and digital marketing sectors, delivering actionable insights and optimized business strategies.

Experience

Capital One | Software Development Engineer | Plano, TX

Oct 2024 – Jan 2025

- Maintained version control of data repositories, ensuring consistency, accuracy, and streamlined workflows across multiple environments.
- Extracted, analyzed, and managed data from **GitHub** repositories by cloning main branches, creating feature branches, and updating data structures to improve accessibility and usability.
- Utilized **Java**, **Python**, and **SQL** to process, validate, and standardize data, ensuring datasets were error-free and optimized for downstream analytics and consumption.
- Developed **JavaScript**-based scripts to enhance data processing automation, improving workflow efficiency and reducing manual intervention.
- Leveraged tools such as **IntelliJ Community Edition** for scripting, debugging, and testing data workflows, enhancing the reliability and scalability of solutions.
- Automated data validation and quality assurance processes through custom Python scripts and tools like **Maven** (maven clean install), ensuring smooth functionality of workflows and error-free datasets.
- Delivered clean, version-controlled datasets by merging finalized updates back into the main branch, maintaining high-quality data pipelines and ensuring seamless integration into existing systems.

Collabera | Data Analyst | New Jersey, NJ

Sept 2023 - Jun 2024

- Supported **Agile scrum methodologies** to effectively manage financial analysis projects, helping forecast trends and identify opportunities for cost savings.
- Assisted comprehensive data collection from diverse sources including budget planning, enabling efficient resource allocation while executing thorough data cleaning, validation, and quality control measures to maintain data accuracy and integrity.
- Conducted thorough data collection from various sources, including a vast array of client records exceeding 30,000, financial data, and billing systems.
- This comprehensive dataset served as the foundation for delving into time series analysis and predictive analytics, allowing to extract valuable insights.
- Created 10 plus interactive **Power BI** dashboards to conduct in-depth analysis of financial risks, offering recommendations to mitigate their impact. Additionally, enhanced forecast accuracy by 15% through the development of a financial model and optimized reporting procedures, resulting in a 25% reduction in report generation time.
- Leveraged tracking tools like **Jira** and **HP Quality Center** for efficient project tracking, documentation, and collaboration.

DigiM Concepts | Data Analyst | India

Apr 2020 - Nov 2021

- Led data analysis projects to optimize business strategies and enhance operational efficiency by conducting cost/benefit, **GAP**, and **SWOT** analyses for actionable insights using **Adobe Analytics**, and **Stata**, while leveraging **Alteryx** for data preparation and transformation.
- Employed machine learning libraries such as **Scikit-learn** and **TensorFlow** to build predictive models for customer behavior analysis, lead scoring and churn prediction.
- Leveraged **Numpy** and **Pandas** to form precise clusters and gain actionable insights.
- Implemented a **Bloom Filter** and **Hadoop** for efficient data joins and large-scale processing, optimizing performance for website traffic, social media engagement.
- Designed and optimized **ETL** workflows using **Python** to automate data extraction from various marketing data sources, transforming and loading data into analysis-ready formats to support targeted campaigns, performance tracking, and strategic decision-making.
- Integrate with various APIs of popular platforms such as Google Ads, Facebook Ads, Twitter, and Instagram, allowing for seamless data retrieval, campaign management, and performance tracking.

Education

DePaul University

Jan 2022 - Jun 2024

Master of Science in Data Science | Chicago, IL

Gujarat Technological University

Jun 2016 - Apr 2020

Bachelor of Engineering in Information Technology | Gujarat, India

Skills

Methodologies:

SDLC, Agile, Waterfall

Programming Languages:

Python, HTML, CSS, C, C++, R Programming, SQL, Ionic Framework, JavaScript Analytics

Tools:

Advanced Excel, Power BI, Tableau, Alteryx

Software:

Jupyter Notebook, Github, Microsoft Visual Studio, JIRA, MS Project, MS SharePoint, (Pivot Tables, VBA & V-LOOKUPS)

Database:

Microsoft SQL Server, Oracle, PL/SQL

Projects

Airbnb Data Analysis

Apr 2023 - Jun 2023

- Airbnb's market rise was aided by the application of **Data Mining** techniques to obtain business insights.
- Built models utilizing Logistic Regression, Decision Trees, and Neural Networks to examine the key performance indicators (KPIs) influencing the new hosts room pricing and project a profit margin of roughly 19%.

Cost Optimization Model for Delta Air Lines using Python

Jan 2022 - Mar 2022

- Developed a **Python**-based cost optimization model using Pandas and Multivariate Linear Regression to analyze over 200,000 data points, integrating **HTML**-based data visualization dashboards to enhance decision-making for Delta Air Lines, resulting in actionable budgeting and expense strategies.
