Summary

Results-driven Healthcare Data Analyst with 2+ years of expertise in data extraction, analysis, and reporting in healthcare settings. Proficient in SQL, Excel, SAS, Python, Power BI, and Tableau, with a strong focus on ensuring HIPAA compliance and data security. Skilled in leveraging advanced statistical methods and visual analytics to improve patient outcomes and reduce hospital readmissions. Adept at collaborating across teams to implement data-driven strategies for optimizing healthcare processes and enhancing decision-making.

Technical Skills

- Data Analysis & Reporting:** SQL, Excel (VLOOKUP, Pivot Tables, Regression Analysis, Chi-Squared Tests), SAS, Python (Pandas, CSV), Tableau (LOD Expressions, Data Blending), Power BI (Slicers, Drill-throughs, KPI Indicators)
- Data Validation & Quality Control:** SQL (Automated Queries), Excel (Data Cleaning, IFERROR, TEXT Functions), Anomaly Detection, Data Governance
- Healthcare Systems:** EHR Systems, HIPAA Compliance, Patient Demographics Analysis, Disease Trend Identification
- Data Visualization:** Power BI, Tableau
- Statistical Methods:** Regression Analysis, Moving Averages, Forecast Sheets, Chi-Squared Tests
- Automation:** Python (Automation of Routine Data Tasks), SQL Queries

Professional Experience

- Healthcare Data Analyst**, RWJBarnabas Health

03/2024 – Present | Remote, USA

 - Gathered requirements and worked on EHR systems analysis to extract patient demographic data (age, gender, race) using SQL. Ensured 100% HIPAA compliance while managing over 50,000 patient records with accuracy, security, and regulatory adherence.
 - Used Excel techniques such as VLOOKUP, pivot tables, chi-squared tests, and cross-tabulation to validate and clean data, achieving 98% accuracy. Identified inconsistencies, removed duplicate records, and ensured high-quality data for analysis.
 - Applied SAS programming to perform advanced statistical analysis on patient demographics, including chi-squared tests and logistic regression to find correlations between demographic factors and health results, improving hospital readmission predictions by 15%.
 - Created Excel-based reports incorporating regression analysis, trend lines, and pivot tables. These reports provided key insights that contributed to a 20% reduction in readmission rates by identifying high-risk patients.
 - Designed interactive Power BI dashboards using built-in validation methods for data accuracy. Used Power BI's inbuilt features like slicers, drill-throughs, and KPI indicators to track patient demographics and health trends, improving patient care strategies by 10%.
 - Collaborated with cross-functional teams to integrate data insights into operational strategies. Contributed to a 25% reduction in unnecessary hospital readmissions by optimizing patient care plans based on data-driven recommendations.
- Data Analytics Intern**, CIVHC

11/2023 – 02/2024 | USA

 - Spearheaded data governance strategies, improving data accuracy by 15% through robust validation frameworks, anomaly detection techniques, and compliance measures, ensuring high-quality, reliable data for business decision-making and analytical insights.
 - Engineered complex SQL queries to automate data quality verification, detect conflicts, streamline data validation workflows, and enhance operational efficiency, reducing discrepancies and improving data reliability across multiple business functions.
 - Developed interactive Tableau dashboards to visualize data quality metrics, anomaly trends, and compliance insights, enabling stakeholders to track and address inconsistencies proactively.
 - Created comprehensive documentation detailing data quality control processes, best practices, and standard operating procedures, facilitating knowledge transfer and ensuring adherence to industry regulations and organizational norms.
 - Collaborated with cross-functional teams to identify, investigate, and resolve data quality issues, leveraging analytical tools and dashboards to monitor trends, detect anomalies, and implement corrective actions, improving data integrity and decision-making accuracy.
- Associate Healthcare Data Analyst**, Altera Digital Health India

05/2021 – 07/2022 | India

 - Collected and processed healthcare data from hospital records, insurance claims, and pharmacy databases using SQL. Ensured data security and HIPAA compliance while handling over 50,000 records for disease trend identification and reporting.
 - Validated and cleaned data using Excel functions such as IFERROR, TEXT functions, and Named Ranges, improving data accuracy to 98% and ensuring consistency across patient demographic and disease-related datasets.
 - Identified trends and anomalies in patient health records using Excel's Moving Averages and Conditional Formatting, enabling early detection of high-risk conditions and providing insights for preventive healthcare measures.
 - Developed interactive Tableau dashboards with LOD expressions, parameters, and data blending, enabling healthcare professionals to visualize disease trends and patient demographics in real time for data-driven decision-making.
 - Collaborated with healthcare teams including doctors, nurses, and policy advisors to translate data insights into actionable strategies, leading to a 15% reduction in hospital readmission rates through improved patient management programs.
 - Automated routine data tasks using simple Python scripts (Pandas, CSV module) and SQL queries, reducing manual data processing time by 30% and ensuring timely and accurate updates for analysis.
 - Generated Excel-based analytical reports using Trendlines, Forecast Sheets, and Data Bars, helping healthcare administrators track disease progression and patient recovery rates, contributing to a 10% improvement in care strategies.

Education

- Master of Science**, University of Denver

09/2022 – 04/2024

Health Informatics (Health Data & Analytics)

Certificate

- SAS Certified Specialist: Base Programming Using SAS 9.4
