

Apoorva Tyagi

Milpitas, CA | (669) 264 9455 | apoorva.tyagi0195@gmail.com | <http://linkedin.com/in/apoorva-tyagi19>

EDUCATION

California State University, East Bay, California, USA <i>Master of Science in Data/Business Analytics</i>	Aug 2022 – May 2024
Birla Institute of Management and Technology (BIMTECH) <i>Master of Business Administration (MBA)</i>	Aug 2017 – Mar 2019
University of Delhi <i>Bachelors in Finance</i>	Jul 2013 – May 2016

WORK EXPERIENCE

Associate Data Scientist, Thermo Fisher Scientific, California, USA **Oct 2024 – Present**

Skills: Python, SQL, Databricks, Snowflake, Azure DevOps, Machine Learning Models, Azure OpenAI, ETL, Data Analysis, AI, GIT

- Developed and validated predictive models using advanced analytic models and exploratory data analysis (EDA) techniques to optimize clinical trial timelines, achieving a 36% performance improvement.
- Analyzing high dimensional clinical trials datasets and engineering critical features to enhance model reliability and overall prediction consistency.
- Integrating data drift detection and data quality monitoring into forecasting pipelines by leveraging Evidently to calculate key metrics and MLflow to log experiments and performance KPIs, ensuring model reliability and consistency in production.
- Developing a scalable solution that leverages Azure OpenAI and GPT models to automatically generate detailed model cards from Databricks repositories, reducing manual documentation efforts.
- Collaborating with business stakeholders to understand requirements, present model performance metrics, and incorporate their feedback into feature enhancements and model refinements.

Product & Data Analytics Intern, GEICO (Berkshire Hathaway subsidiary), Maryland, USA **Jun 2023 – Aug 2023**

Skills: SQL, SAS, R, Python, PowerBI, Excel, Data Analysis

- Assisted in refining risk rating models for insurance products, optimizing segmentation and risk assessment strategies to enhance profitability and competitiveness.
- Utilized statistical programming languages such as SQL, SAS, and R to analyze large datasets and assess the effectiveness of existing risk factors and recommending data-driven changes.
- Leveraged R and SQL to build reproducible scripts for model validation and exploratory analysis, improving consistency across insurance product lines.
- Conducted comprehensive analysis of business metrics, historical trends, and competitor actions using PowerBI to formulate strategic planning and market positioning, contributing to data-driven decision-making.

Data Analyst (Associate Manager), Mahindra Insurance Brokers **May 2019 – Oct 2021**

Skills: SQL, Tableau, Excel, Data Analysis, ETL, Data Mapping

- Conducted data analysis, identifying opportunities for business growth, resulting in a 15% increase in revenue.
- Developed data visualization dashboards with Tableau to drive strategic decision-making and created data models using Microsoft Excel for trend analysis and insights generation.
- Coordinated cross-functional teams to develop and implement data-driven strategies aimed at increasing customer acquisition and retention by 35%.
- Evaluated and interpreted data to identify patterns, trends, and insights to support business decision making and analyzed business information by combining data from multiple sources to improve process flow and efficiency.
- Utilized advanced analytics techniques, including statistical modeling and predictive analytics, to forecast market trends and assess the potential impact of new features on customer engagement and revenue generation.

PROJECTS

Multi-Document Retrieval Chatbot [Python, Visual Studio, LangChain, OpenAI API, Embeddings, Vector stores]

- Developed a multi-document retrieval and chatbot system using LangChain and ChatGPT, enabling efficient extraction and summarization of information from diverse text sources. Integrated document parsing, vector embeddings, and conversational AI to enhance user interactions, providing accurate and context-aware responses in a scalable framework.

Customer Churn Prediction Model Development [Python, Logistic Regression, kNN, XG Boost, Data Analysis, Data Modeling]

- Conducted data analysis and data modeling using logistic regression, KNN, and Decision Trees models to predict customer churn for a telecom company. Performed graphical exploration and analyzed descriptive statistics to gain insights from customer usage behavior, contract details, and payment information.

TECHNICAL SKILLS

Coursework – Data Analytics, Data Warehousing, Business Intelligence, Data Visualization, Database Management, Machine Learning

Programming Languages – Python, SQL, R

Tools – Databricks, Snowflake, Azure DevOps, SAS, Tableau, MySQL, MS Excel, Power BI, Coginiti, Visual Studio, GIT, Google Analytics
