

APOORVA TALARI

DATA ANALYST

VA | (219)-448-9681 | apoorvatalari24@gmail.com | [LinkedIn](#)

SUMMARY

- **Accomplished as a Data Analyst** with over **3+ years of experience** in healthcare, travel-tech, and energy domains, applying **SQL, Python, and R** to analyze, visualize, and optimize large-scale datasets across structured and semi-structured sources.
- Proficient in designing **interactive dashboards** using **Power BI, Tableau, and Excel**, enabling cross-functional reporting, performance monitoring, and executive decision-making.
- Experienced in building **ETL pipelines** and automating data workflows using **AWS Glue, Azure Data Factory, SSIS, and Snowflake**, reducing latency and manual effort in data operations.
- Strong foundation in **machine learning techniques** including regression, clustering, and classification using **Scikit-learn, TensorFlow, and PySpark**, supporting predictive modeling and business forecasting.
- Background in **data governance, data warehousing, and NLP**, with hands-on exposure to **Redshift, PostgreSQL, MongoDB, and Apache Spark**, supporting HIPAA-compliant healthcare analytics and operational insights.

EXPERIENCE

Blue Cross and Blue Shield

VA

Data Analyst

Jul 2024 – Current

- Designed **interactive dashboards in Power BI** to track provider performance, claims status, and patient risk metrics, reducing reporting time by **6 hours/week**.
- Built **predictive models** using **Scikit-learn** and **logistic regression** to identify high-risk patient populations, contributing to targeted care programs covering **25,000+ patients**.
- Automated **ETL pipelines** using **AWS Glue** and **SQL Server**, decreasing manual data handling errors by **40%** across clinical data systems.
- Conducted **anomaly detection** using **Python (Pandas, NumPy)** on pharmacy claims data, identifying **700+ potential billing discrepancies** per month.
- Implemented **HIPAA-compliant data governance protocols**, improving audit readiness and ensuring **95% compliance** with PHI data policies.
- Developed **custom SQL queries** on **Redshift** for ad-hoc financial analytics, shortening decision turnaround time by **22%**.
- Collaborated with data engineering teams in **Agile sprints**, enhancing backlog delivery velocity by **15%** using **Jira** and **Scrum** ceremonies.

Airbnb

India

Data Analyst

Dec 2020 - Jul 2022

- Generated over **120 SQL-based analytical reports** to track **10M+ guest bookings** and analyze revenue trends across **50+ global markets**, driving actionable insights for regional strategy teams.
- Designed and implemented **customer segmentation models** using **K-Means clustering** on **1.2M user records**, enabling personalized campaigns that reached over **600,000 users**.
- Built and managed a **15M+ record Snowflake data warehouse**, supporting real-time analytics and improving query performance for cross-functional dashboards.
- Performed **exploratory data analysis** on datasets exceeding **5GB** using **Python (Pandas, Matplotlib)** to uncover booking anomalies, cancellation behavior, and pricing inefficiencies.
- Automated **25+ recurring data workflows** via **Azure Data Factory**, reducing manual effort by **80+ analyst hours/month** and enhancing pipeline reliability.
- Developed interactive dashboards in **Tableau** to monitor **refund trends, guest activity, and fraud alerts** across 20+ markets, accelerating fraud detection from **48 to under 12 hours**.
- Conducted **A/B testing** on homepage UI changes across a user sample of **300,000 sessions**, using **Python (SciPy)** to determine statistically significant improvements in user engagement.
- Standardized cleaning of **12 mission-critical datasets** using **Pandas**, eliminating **95% of inconsistent entries** and improving model training data integrity.
- Collaborated with product and finance teams on **quarterly reports influencing \$5M+ in product investments**, delivering insights that shaped roadmap prioritization.

Adani

India

Data Analyst Intern

Jun 2020 - Nov 2020

- Developed **automated Excel dashboards** with pivot tables and macros to deliver **weekly summaries on 10,000+ energy usage records**, enabling faster executive-level reviews.
- Supported the design of **ETL pipelines using SSIS**, improving data integration across **3 business units** and reducing sync errors in supply chain data by **30%**.

- Wrote **intermediate SQL queries in PostgreSQL** to extract **monthly KPIs** from a dataset of **12,000+ logistics records**, contributing to accurate tracking of over **200 shipments/month**.
- Performed **data cleaning** on **500K+ supply chain rows** using **Pandas**, achieving a **95% data quality score** as verified by internal audit teams.
- Analyzed **inventory data spanning 2 fiscal years**, uncovering seasonal overstock trends that led to an estimated **reduction of 8,000+ excess units** across key SKUs.
- Built **vendor performance visualizations in Tableau**, supporting procurement decisions with improved visibility into **50+ supplier metrics** and quarterly efficiency ratings.

TECHNICAL SKILLS

Programming Languages: Python, SQL, R
Data Visualization: Power BI, Tableau, MS Excel (VLOOKUP, Pivot Tables, Macros, VBA)
Big Data & Databases: MySQL, MongoDB, PostgreSQL, BigQuery, AWS Redshift, SQL Server, SSIS, SSAS, ETL
Cloud Technologies: AWS (S3, EC2, Lambda, Glue), Azure
Data Processing Libraries: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow, Apache Spark, PySpark
Machine Learning: Regression, Classification, Clustering (K-Means, DBSCAN), Decision Trees, Neural Networks, NLP
Data Warehousing & Modeling: Snowflake, Data Warehousing, Data Governance, Data Cleaning, Data Wrangling, Data Modeling, Predictive Analytics, Data Mining, Automation Scripts
Methodologies: SDLC, Agile, Scrum

EDUCATION

Purdue University Northwest	Hammond,IN
Master of Science in Computer Information Technology	Aug 2022 - May 2024
Guru Nanak Institutions Technical Campus	Hyderabad,India
Bachelor of Technology in Electronics and Communication Engineering	Aug 2016 - Dec 2020

PROJECTS

Churn Prediction Model for Banking Clients (Machine Learning)

- Formulated a **neural network-based churn prediction model** using **TensorFlow** and **Pandas**, achieving 82.5% accuracy on banking datasets by identifying high-risk customer segments through feature importance analysis.
- Exported the trained model in **ONNX** format for production deployment, enabling scalable real-time inference within customer service platforms using **Python, NumPy, and Matplotlib** for model evaluation and visualization.

Healthcare Cost Prediction System

- Devised a **cost prediction model** using **Scikit-learn (Random Forest, Linear Regression)** to forecast patient treatment expenses based on claims history, diagnosis codes (ICD-10), and demographic data, improving financial planning accuracy by 28%.
- Designed interactive dashboards in **Power BI** and **SQL Server** to visualize predicted vs. actual cost trends across departments, enabling operational leaders to identify high-cost cases and implement early intervention strategies.
