Professional Summary

Results-driven Business Analyst with over two years of experience in business systems analysis, data analysis, and technology integration. Proven ability to translate business needs into technical requirements, lead projects through the full software development lifecycle (SDLC), and deliver data-driven solutions. Expertise in SQL, data visualization, and process mapping, with a strong foundation in both public sector and SaaS environments. Seeking to leverage a unique blend of analytical and technical skills in a challenging Data Engineer, Data Scientist, Machine Learning Engineer, or Software Engineer role.

Technical Skills

- **Data & Analytics:** SQL, Snowflake, dbt, Segment, Power BI, Tableau, Excel (Advanced), Cohort & Funnel Analysis, Reverse ETL, Data Visualization, Executive Dashboards
- **Programming & Scripting:** Python, C#, JavaScript, HTML/CSS
- **API & Integration:** RESTful & SOAP APIs, Postman, JSON, XML, HubSpot, Datadog
- **Cloud & DevOps:** Microsoft Azure, CI/CD Principles, DORA Metrics
- **Business Analysis & Product Management:** JIRA, Azure DevOps, Confluence, Lucidchart, Balsamiq, Figma, Requirements Gathering, User Story Creation, UAT Coordination, Process Mapping (BPMN), Stakeholder Management

Work Experience

Darko.inc | Computer Science Intern | Aug 2023 – Dec 2023

- Engineered the complete backend for an IoT smart door system using Python and Flask, deploying on a Raspberry Pi to control a live-stream camera, electronic lock, and integrated LED lighting.
- Architected and built secure RESTful APIs to manage real-time video streaming and hardware control, reducing latency by implementing asynchronous tasks for video processing.
- Implemented a computer vision module with OpenCV for real-time motion detection, triggering automated video capture and user alerts, which increased system responsiveness and security.

- Designed and normalized an SQLite database schema for storing access logs and user credentials, ensuring data integrity and enabling efficient auditing capabilities.
- Programmed low-level GPIO interfaces to reliably control hardware components, including solenoids and LED indicators, implementing fail-safe logic to ensure system stability.

Knapsack | Business Analyst | Jun 2020 – May 2022

- Translated executive leadership requirements into technical specifications for real-time analytics dashboards, utilizing SQL in Snowflake to provide critical insights for quarterly business reviews.
- Architected and implemented event-driven data pipelines using Segment to capture user behavior data, feeding into Snowflake and enabling product teams to perform cohort and funnel analysis.
- Developed and deployed modular, reusable data models with dbt, establishing a single source of truth for product data in Snowflake and improving data governance and reporting accuracy.
- Wrote and optimized complex SQL queries joining disparate data from HubSpot, Linear, and Datadog to build comprehensive datasets for cross-functional analysis.
- Modeled current-state and future-state business processes using Lucidchart and Visio, identifying key areas for workflow optimization and system integration to reduce manual data entry.
- Led Agile ceremonies, including requirements gathering and backlog grooming sessions, to elicit and document user stories and acceptance criteria in JIRA for a cross-functional analytics team.
- Conducted comprehensive risk assessments and feasibility studies for proposed analytics initiatives, evaluating cost-benefit and system impact to guide project prioritization.
- Managed the end-to-end User Acceptance Testing (UAT) process for new analytics solutions, creating test plans and coordinating with end-users to ensure final products met business requirements.

Projects

Electric Vehicle Battery Management System

- Developed a prototype of a hybrid vehicle powered by both battery and solar energy.

- Engineered a system to automatically swap between two batteries based on real-time power needs, optimizing energy consumption and extending vehicle range.

Edu Learn | Web-Based Educational Platform

- Created a full-stack web application that allowed students and educators to share and upload educational materials and assignments.
- Designed and implemented a user-friendly interface using HTML, CSS, and JavaScript.

Expense Management System

- Built a web-based application for tracking and managing personal expenses.
- The system provided users with data visualization tools to analyze their spending habits.

Work Logger

- Developed a web application for logging daily work activities and tasks.
- Implemented features to generate graphical representations of work data, allowing users to visualize their productivity and time management.

Education

Master of Science, Computer Science | Campbellsville University | Graduated May 2025

- GPA: 3.6

Bachelor of Engineering, Electrical Engineering | Government College of Engineering, Dharmapuri, India | Graduated 2020

- GPA: 6.5
