PROFESSIONAL SUMMARY: Software Developer with experience in building scalable Java/Spring Boot applications, RESTful APIs, and microservices; currently pursuing an M.S. in Computer Science with a focus on Data Science.

EDUCATION:

University of North Carolina at Charlotte, Charlotte, NC

Masters of Science in Computer Science | Concentration: Data Science

GPA: 4.0

MLR Institute of Technology, Hyderabad, India

Bachelors of Technology in Computer Science

TECHNICAL SKILLS:

Programming and Web Technologies: Java, Python, Node, JavaScript, Ajax, React, HTML, CSS, XML, jQuery, Angular, JSON

Databases: Mongo DB, Oracle SQL, MySQL, Dynamo DB, MS SQL

Tools and Frameworks: Spring Boot, Spring, Maven, Kafka, Redis, Postman, Kubernetes, Docker, Git, Junit, JMeter, Jenkins

AWS: EC2, S3, Lambda, RDS, Dynamo DB, Route53, Cloud Watch, Cloud Formation, ELB

Big Data: Map-Reduce, Scala, Kibana, Elastic Search

WORK EXPERIENCE:

F13 Technologies, AWS Intern, India

Jun 2022 – May 2023

- Developed and deployed Spring Boot REST APIs on AWS using EC2, S3, RDS, and Lambda for scalable backend solutions.
- Supported cloud migration of legacy backend systems to Spring Boot microservices, enhancing performance and cost-efficiency.
- Tuned REST endpoints and optimized database access patterns in RDS to improve response times and reduce latency.
- Authored technical documentation for API architecture, CI/CD workflows, and AWS deployment practices to aid team onboarding.
- Contributed to high-availability and disaster recovery designs for critical backend services hosted in AWS.

1STOP, Data Science Intern, India

Jan 2022 – May 2022

- Collected, cleaned, and preprocessed large datasets to prepare them for analysis and modeling.
- Built and evaluated machine learning models (classification, regression, clustering) to support business decision-making.
- Designed data visualizations and dashboards using tools like Tableau, Power BI, or Python libraries (e.g., Matplotlib, Plotly) to communicate findings to non-technical stakeholders.
- Helped maintain and improve the quality and governance of enterprise data assets.

PROJECTS:

Indeed – Job Application Prototype

- Designed and developed a full-stack job platform with React.js, Node.js and Redux for job seekers and employers
- Migrated from REST APIs to GraphQL, significantly improving data fetching efficiency and optimizing performance.
- Implemented Kafka MQ for event-driven architecture, enabling real-time job updates and asynchronous processing.
- Integrated Redis for caching, enhancing API response times and application performance.
- Deployed the application on AWS EC2, ensuring scalability, reliability, and high availability.

Medicine reminder system

- Developed an Android app with AlarmManager, BroadcastReceiver, and SQLite to schedule reliable medicine intake alerts, improving user health management.
- Implemented AlarmManager and BroadcastReceiver to trigger notifications and timely alerts for medication intake.
- Used SQLite (or Room Database, if applicable) to store and manage user profiles, medication schedules, and history securely.
- Integrated DatePicker and TimePicker dialogs to allow users to easily set custom reminder times.

Highlight:Published a paper on this project in IJNRD's Vol 8 issue 5.

Voice assistant

- Developed an AI-powered voice assistant using Python enabling users to interact with their devices.
- Created voice synthesis capabilities using Text to speech libraries like pyttsx3 to provide responses
- Optimized voice command recognition by fine-tuning algorithms to handle accents and noisy environments
- Integrated third-party API integrations to provide real-time information
- Technologies Used:** Java, Java Swing, Socket Programming, TCP/IP.
