

Arth Patel

Cybersecurity Analyst

Dallas, TX | 951-317-8270 | arth.p@mymailwork.com | LinkedIn

SUMMARY

Cybersecurity Analyst with 3+ years of experience executing enterprise-wide security strategies, managing incident response, and ensuring compliance with federal and industry standards. Expert in securing hybrid environments through advanced threat detection, vulnerability management, cloud security, and SIEM/SOAR optimization. Proven track record of reducing risks, eliminating vulnerabilities, and building highly responsive SOC operations. Adept at collaborating across technical and executive teams to align security programs with business objectives and compliance mandates (NIST, RMF, ISO, HIPAA, FISMA). Experience in leveraging advanced security technologies SIEM (Splunk, ArcSight), IDS/IPS, firewalls, EDR, DLP, and threat intelligence platforms-to detect, and neutralize sophisticated cyber-attacks.

SKILLS

Methodologies: Agile, Waterfall

Programming Languages: Python, Java, C++, Power Shell

Cryptography and Compliance: PCI, NIST, ISO 27001, IRAM2 standards

Networking Protocols: TCP/IP, IPv4, VPN, HTTP, DNS, LAN/WAN, OSPF, BGP

Security Tools: Nmap, Snort, TCP Dump, Nessus, Wireshark, Core Impact, OpenVAS, HIDS/HIPS, SIEM, Active Directory, IDS, IPS, DNS, DHCP, Splunk, Burp suite, OWASP, SIM Tools, Vulnerability Scanning

Cloud Technology: AWS, Azure, GCP

Firewall Administration: Cisco ASA and FortiGate

Repository Tools: MS SharePoint Server, Confluence, GitHub

Database: MS SSMS, MySQL, AWS RDS

Reporting, Modeling & Analytics Tools: MS Office, MS Visio

Other Tools: Vendor Management, Vendor Risk Management, Archer Tool

WORK EXPERIENCE

Assurant, USA | Cyber security Analyst

Jan 2025 - Current

- Spearheaded file system creation and maintenance, optimizing security and printer configurations while improving TCP/IP addressing, leading to enhanced network performance and reliability.
- Configured and optimized firewalls (Cisco ASA, Palo Alto) to enforce stringent security policies and control network traffic, implementing access control rules that reduced attack surfaces and prevented unauthorized access.
- Established a streamlined vulnerability patching process, achieving a 98% patch application rate on critical systems, reducing exposure to known vulnerabilities and improving compliance with security best practices.
- Performed detailed analysis using Splunk and online threat intelligence resources to assess the legitimacy of files and emails, significantly reducing false positives and enhancing threat detection accuracy.
- Aligned security controls with business objectives by leveraging COBIT frameworks, ensuring technology and security strategies were in harmony with organizational goals and risk management priorities.
- Converted AWS infrastructure to a serverless architecture using Terraform, streamlining deployment processes, reducing operational costs, and increasing the scalability and efficiency of cloud resources.
- Enhanced expertise in cryptography, ensuring secure communication channels and implementing key security standards including PCI, NIST, ISO, and IRAM2 to meet compliance and best practices.

Veritas Software, India | Cyber security Analyst

Nov 2020 - June 2023

- Engaged in network vulnerability assessments, analysis, monitoring, and reporting, reducing potential risks.
- Designed secure network architectures incorporating firewalls, IDS, and IPS, significantly enhancing protection against cyber threats and improving the organization's overall security posture.
- Performed compliance audits to ensure adherence to industry standards and regulatory frameworks, including GDPR and HIPAA, successfully closing compliance gaps and mitigating legal risks.
- Conducted Network scanning using tools like Nmap and Nessus as part of penetration testing and forensic investigation, patching vulnerabilities and enhancing system security.
- Developed a Security Control Assessment test plan, strengthening information system security controls.
- Analyzed network traffic using tools such as Wireshark and Splunk to detect unauthorized access, data exfiltration, and other security threats, improving the organization's ability to respond to incidents in real time.
- Managed and optimized Azure Security Center, utilizing its monitoring and detection tools to identify and respond to security threats within Azure environments, enhancing cloud security.
- Reduced security incidents by 20% through proactive threat hunting using Metasploit and Burp Suite, identifying and remediating vulnerabilities before they could be exploited by adversaries.
- Developed and communicated application security metrics to key stakeholders, contributing to a measurable improvement in the organization's overall security posture and risk awareness.

EDUCATION

Master of Science in Cybersecurity, Technology, and Policy | The University of Texas at Dallas, TX

Bachelor of Engineering in Computer Engineering | Gujarat Technological University, India

CERTIFICATIONS

CompTIA Security+
